THE READING ROOM

The Indian Tariff Problem: By Hirendra Lal Dey, M.A., Ph.D.: London: George Allen and Unwin Ltd., 1933: Price 16s.: Pages 304.

Mr. Hirendra Lal Dey has brought forth a very timely book. For I am one with him in urging that the greatest menace to the peace and welfare of India to-day is the domination of her economic life by cliques of pseudo-industrialists clamouring for indiscriminate protection. They bestride the narrow world of our primitive economy like a Colossus, trampling the consumers well nigh out of existence. At present the odds are with them. The trite slogan of "Swadeshi before Swaraj" pleads for them trumpet-tongued before masses and classes alike. Popular sentiment thus enlisted, the rest is easy work. The press is ever the slave of the big advertiser. Governments need no more than a *quid pro quo*; and parties have their party funds, or the lack of them; and the shining example of Tamanny Hall is by no means difficult to emulate even for the youngest or the least powerful of the world's legislative assemblies. The consumer has no place in such a picture. Who can dare to stem the tide of protectionism in India! The White Paper ensures for the members of the ruling community equality of trading rights. And once the foreign and indigenous trading communities have adjusted their differences with some kind of logrolling, what is there to prevent the consumer from being bled to the bone by the rapacity of a compact class of industrialists?

Here and there a voice of protest has been raised in the less slavish sections of the Indian press. But no working journalist, financial or other, could find the time to frame a convincing case for fairplay to the consumer. And his attacks against this industry or that are more full of sentiment than reason or argument.

Mr. Dey's work is a breath of fresh air in an atmosphere charged with ignorant or interested protectionism. He attacks the protectionist regime of the last decade from all points. To him it is indefensible either from the standpoint of the principles of modern taxation or the needs of the particular industries or the equirements of the national economy. Even granting that protection was necessary, the exact form chosen was the least wise and fitted. There is no room for suspicion that the book is inspired by any sectional interest. His argument involves attacks against one and all, against the Government, against the Tariff Board, the foreign importers and indigenous producers; and not from one attack does he shrink. It is a strictly scientific treatise; and the true scientist is not afraid of truth.

His central theme is that none of the three big industries to which protection has been granted in a liberal measure was really in need of it and that, even if protection were necessary, at any time, a bounty would have been far better than an increase in import duties. But the exposition of the central theme is preceded by an exceptionally able analysis of the incidence of protective tariffs in India. He emphasises progressive taxation as a cardinal principle of modern public finance. He points out the importance of direct taxation in any scheme which seeks to keep taxation within the limits of capacity. He draws attention to the fact that indirect taxation, especially when it falls on the necessaries of life, tends to have an actually regressive effect. He cites statistical tables to show that in countries like India the revenue derived from direct taxation is a small proportion of the total tax revenue of the State and that even within the limits of indirect taxation, the ratio of necessaries to luxuries is very low. In India, the tax system is extremely regressive. The taxation of necessaries for life and means of production is 42.19 per cent. of the total customs and excise as against 14.36 per cent. in England. And if the total tax revenue of the state is taken into consideration, the percentage works out to 29.84 per cent. as against 5.59 per cent. in the United Kingdom. Incidentally, Mr. Dey considers the iniquity of exempting large agricultural incomes from taxation and subjecting small cultivators to taxes that are defensible only on the basis that the State is entitled to a rent—a question which even to-day remains an open one.

Thus, if we remember that the masses of India are extremely poor and live on the margin of subsistence and that the tax system of the country is such as to press heavily on the lower classes of the country, it would be seen that we cannot embark on a policy of protectionist import duties without intensifying the existing inequalities of wealth. The Fiscal Commission, no doubt, gave a number of reasons in support of the policy of discriminating protection which it recommended. And among these are the need for relieving the pressure on land, for creating a new demand for labour, development of the capital resources of the country by providing outlets for investment, and the development of national character through a diversification of individual faculties. Mr. Dey's answers to this are extremely pointed. He contrasts the increased employment in industry with the natural increase in population during the vaunted protectonist regime. He asks people to remember that before long—if not already—Indian agriculture would be suffering as severely from foreign competition as Indian industry; and that while we are engaged in relieving the dependence on agriculture, agriculture itself might fail to support or sustain us. And as for the cultural aspects of the protectionist creed in India, Mr. Dey's answer should be telling but that the number of those who feel an intellectual sympathy with him is extremely limited:

"And lastly, we must remember that the strength and vigour of national character are ultimately dependent, not so much upon the exceptional ability and training of a few individuals in the enjoyment of specially favourable opportunities, as upon the physical and moral stamina and intellectual training of the average individual. Hence, a policy of industrial development under a regime of protectionism, in so far as it diminishes the purchasing power of the income of the average individual and thereby reduces the material means of his personal development, actually tends to weaken national character at many more points than strengthen it."

Whether the development of the average individual has been hindered or not, it is certain that protectionism has debased the industrial community in India. The cotton mill industry, next in importance only to agriculture, has been so pampered with official support and non-official propaganda and patronage that it no longer recognises internal economy as one of its prime obligations. It has been in the forefront during the last three years, more so than in the earlier periods of its history; and at no time did any of its spokesmen make even a mention of reducing costs, except when there was the shortlived and abortive talk of amalgamation associated with the name of Sir Ness Wadia. It is accepted on all hands that the Indian cotton mill industry is almost the only industry in the whole world which has been making profits in the present depression. It had thus an opportunity, denied to others, of putting its house in order and strengthening its case for public support when there is genuine need for it. No one outside the ranks of the industry would deny that it would be suicidal on the part of the country to grant any more help to the cotton mill industry without reliable assurance of early reform. But Mr. Dey's thesis goes further. He

contends that at no time was there real need for protection and that the natural advantages of India should have sufficed to develop this industry. It would be impossible within the scope of a short review to go into all his arguments. The gist of his argument is that, protection or no protection, the industry has registered throughout the whole course of its history, steady continous and sometimes even marked progress; that up to 1921-22 the small import duty played little part in promoting that development; that both the spinning and the weaving branches captured an increasing share of the home market before obtaining the differential advantage under the tariffs of the 1921-22 and 1930-31; that the clamour for protection came from the weaker and comparatively inefficient mills whose difficulties are due more to internal than to external competition. The careful student must know that all these contentions have been more or less conceded by the Tariff Board which conducted the first enquiry into the condition of the cotton mill industry.

Similar contentions apply, though in a less degree, to the iron and steel and sugar industries. In all cases of protection it is the same story, that of the consumer all the time paying the piper with managing agents calling the tune in a reckless fashion. Of the iron and steel industry Mr. Dey points out that it is not true that extensions were carried out on the strength of any promise of the Government. He points out that the managing agents of the Tata Iron and Steel Co., Ld., are the managing agents for no less than 14 large-scale industrial concerns. "The connection between the technical staff at Jamshedpur and the managing agents of Bombay is at best an ineffective one for, while the former are altogether innocent of any appreciation of the general commercial and financial aspects of the business, the latter are equally lacking in a proper acquaintance with the technical problems of the industry." He suggests that there has been all through "and ineffectiveness of control over the costs of production."

About the purport of Mr. Dey's thesis there can be no dispute. Protectionism in India does threaten to take its bit between the teeth; and there is no doubt that it is now time for the consuming interests of the country to assure themselves that protection does not militate against the interests of true economy. But at the same time there is a suggestion, which Mr. Dey has not shown himself anxious to remove, that the industrial development of this country can be achieved without any scheme of protection. What is essential is not that the need for protection should be dodged but that the benefits of protection should not be monopolised by a small class of inefficient 'entrepreneurs.' But perhaps, this point is of little importance when one has to concede all the major contentions of Mr. Dey. We do need a respite from this uneconomic protectionism. The public must learn not to be stampeded or coerced into particular lines of action by interested propaganda. And in bringing about such a recognition, Mr. Dey's work—an unbiased, scholarly study, presented in telling argument and incontrovertible conclusion—is, indeed, as valuable as any lover of this country would wish.

The Twentieth Triennial Division of Profits

OF THE

ORIENTAL

INDIA'S GREATEST LIFE ASSURANCE COMPANY

falls to be made as at 31st December, 1933

Surplus disclosed at Three Previous Valuations

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

RUSSIAN EMBARGO AND AMERICAN DEVALUATION.

The Russian embargo and the American abandonment have held the stage during the week ; and the attitude of the British public towards both are truly characteristic of the race. On both alike, there is a feeling of genuine perturbation. On both, the British public affects an attitude of lofty unconcern. But while in regard to the latter, there is practically nothing which the British could have to help, the troubles in regard to the former are entirely of their own seeking. The actual course of events since the British engineers were arraigned before the courts of the Soviet on charges of conspiracy and sabotage, should have been known all over the world at the same time. But the reactions of the British Government and the British public to the developments of the week are, in the nature of things, difficult to portray for those who act as mere news correspondents. It may, however, be easily imagined how the present Government would have welcomed the occasion, which the trial in Russia afforded them, of bringing the Soviet again into the fierce glare of public opprobrium. Even before the trial began, the Cabinet had made up its mind as to the exact course it should pursue in this regard. An examination of the mere chronological sequence of events would show that the official assertion of the innocence of the accused was made without any attempt to ascertain the merits of the case. Likewise, the authorities were not prepared to await the course or event of the trial before resorting to the favourite weapon of hitting Russian trade. The powers necessary to impose an embargo were taken while the trial was duly proceeding ; and the news that the sentences inflicted were far milder than was feared or was appropriate to charges of such kind, did not deter the actual imposition of the embargo. It would not be lost on the public that the administration was anxious to make the most of this opportunity for penalising a country which it had always regarded with feelings of the utmost antipathy.

Russia and Britain, but quits.

The non-partisan organs of public opinion have not been slow to condemn the imposition of the embargo as a hasty step, unwarranted by the merits and requirements of the case. Not that these papers regard Russia as being more sinned against than sinning. They have, it must be said, as little faith in Russian justice as any among the Tory Government. They are as ready to believe that the confessions were forced as the worst anti-Soviets. But they argued, granted all the perfidy of the Russian, the actions of the British Government were neither just nor expedient in the long view. The utmost that may be said in favour of the Russian embargo is that the sentences would have been far heavier but for the unmistakable threats held out by the British Government. This, says the *Economist*, "is an assumption which cannot be proved. . . . It is one thing to bargain with a weapon in reserve and another thing to rush into an embargo which is bound to be regarded in Russia as punitive in its intention and may well make it much more difficult for the Soviet authorities to exercise powers of commutation which, we suspect, they would not have been reluctant to use had the British Government been more careful to avoid the appearance of exercising coercion." The ground on which the *Economist* most regrets the embargo is that it has put the British Government on an equal footing of blame-worthiness as the Russians themselves. If the British Government tries to make out that the trial of the engineers "was a political trial staged for the sake of home politics with little concern whether the prisoners happen to be innocent or guilty," the Soviet Government, too, might retort "with a *tuquoque* that the British Government had imposed a political embargo with more concern for the shibboleth of Empire trade and for the cheap popularity of anti-communist gesture than for the welfare of the British nations who have been on trial in Russia."

The *Financial News* is even more caustic in its comment. "At the end of the week," writes this organ in a leading article on April 20th, "it is highly probable that we shall have a full-dressed embargo running and nothing to show for it but a dog-fight for the embargo. . . . . Nothing succeeds like success, and if Thornton and Macdonald are released within the week, the triumph of the mailed fist will be suitably heralded ; but surely the mailed fist was hardly justified for it cannot be worthwhile unless and until it has left beyond doubt that Russia will not yield to friendly negotiation, to proceed with a retaliatory policy which will not confine or even concentrate its damaging forces on the Russian Government.

Probable Effects of the Embargo.

To estimate the actual results of the Russian embargo the following table shows the value of the principal imports from Russia during 1932 :

	1932 £	1931 £
Timber (rough) ...	4,522,443	5,688,592
Timber (hewn) ...	345,429	329,919
Salmon ...	1,566,550	1,861,447
Butter ...	1,234,875	1,969,244
Pit-props or pit-wood ...	985,263	1,063,364
Wheat ...	905,380	6,596,355
Barley ...	666,205	1,176,025

The following are the quantities and value of refined petroleum imported into Great Britain and Northern Ireland from the Soviet in 1932 :

	Quantities Galls.	Value £
Lamp, motor spirit, spirit other than motor spirit, lubricating, gas, fuel and other sorts ...	167,829,626	2,194,160
Motor spirit alone amounts to ...	78,500,291	1,093,405

The list of banned articles make up 2/3 of the total value of Russian imports. By making a selection of goods in this way, the Government have avoided the administrative difficulty of complete embargo as well as complications that would have resulted from the inclusion of certain commodities.

"Among the items in the list of Russian imports that will be allowed to continue are tinned salmon, eggs in shell, flax, and flax tow or codilla, the total values for 1932 being : Tinned salmon, £1,566,550 ; eggs in shell, £23,965 ; flax, £356,466 ; flax tow or codilla, £305,889.

Furs have been omitted on account of the valuable re-export trade and flax because of the dependence of the Belfast Union industry on Russian supplies. The *Economist* points out that "it is possible to exaggerate the extent to which Russia's power to export will be crippled by the embargo."

The value of her total exports in 1932 was £85,000,000 (at the current rate of exchange), of which about one-quarter came to this country. "The embargo therefore covers only about one-sixth of Russia's exports, and even the excluded goods may be saleable in other countries after some adjust-

Air Mail Week.

ment and at some sacrifice of price. It should be remembered that France has just concluded a trade agreement with Russia under which she undertakes not to discriminate against Russian good. Nevertheless the effects of the embargo on Russia is bound to be serious."

Backward Hit of the Boomerang.

As for the effect on Great Britain herself, it should be borne in mind that she is dependent on Russia for about 1/3 of her soft wood supplies. Mr. E. W. Beaton, President of the Timber Trades Association, said that, if the prohibition of the import of Russia's timber was enforced for any long time, other timber-producing countries such as Canada, Sweden, Finland and the U.S.A. would benefit and that the longer the prohibition lasted the more prices would rise. Even the Lancashire cotton industry is apprehensive of the adverse effects of the ban on Russian cotton, since Russian cotton is being used in increasing quantities by Lancashire spinners. It is estimated that about 60,000 bales are imported annually at a value of £550,000. In Sheffield, there is considerable disquiet about the possibility of Russian retaliation which would affect the export trade to Russia in which Sheffield steel firms have taken an increasingly substantial part. Mr. A. J. C. Walters, Secretary of the Sheffield Chamber of Commerce, said that serious consideration must be given to the possibility of repercussions on local trade with Russia. Another circumstance which has to be taken into consideration is that Britain has sold a large part of its export to Russia on credit. This was possible on account of the credit insurance facilities afforded by the Exports Credit Guarantee scheme. With the new measure, serious dislocation would be caused in the trade, with repercussions that are by no means restricted to Russia and Britain. For German credits to Russia, according to the *Economist*, are estimated at £250,000,000 dollars and a substantial proportion of German heavy industry is known to be working to Soviet orders. Thus it will be found that no section of trade can feel complacent about the ban on the Soviet trade. It is, however, hoped that ultimately it would be found possible to remove the embargo by procuring a commutation on the sentences of the British accused.

America's Breach of Faith?

The news of the American embargo on gold was much in the nature of a shock to City circles. It was believed that having brought the internal banking position under control, the President would be content to await the result of his conference with the representatives of foreign powers before embarking on any definite monetary or exchange policy. The break in the dollar at the opening of the week no doubt created a stir, but it was attributed to the cautious policy of the authorities rather than a desire to lead to an apparently defensible devaluation; and this feeling was confirmed when immediately following a further break in the dollar on April 18th, the Treasury issued 3 gold export licences whereby the Guarantee Trust Company and the Chase National Bank each shipped 3 million dollars of gold to France. The Irwin Trust Company was allowed to ship 1,000,000 dollars. Earlier on Saturday, April 15th, the Guarantee Trust Company exported 3,000,000 dollars of gold to Paris. In spite of the virtual assurance of Government support to the dollar, the selling of dollars persisted. The reason for this obviously is that there was every sign that the forces of inflation in America were bringing irresistible pressure on the President. In fact, it is true to say that the inflationists of either party revolted against the discipline of the Republicans and the Democrats alike and had formed themselves, for all practical purposes, into a new party in the American legislature. This development was naturally not lost on the speculators in the exchanges. But opinion in England was inclined to think that America would not be guilty of that patent breach of faith which abandonment of gold standard on her part would, undoubtedly, imply. It was recalled that Great Britain did not abandon gold till the Bank of England spent the last ounce of gold in its efforts to support sterling. As a matter of fact, the gold reserves of the Bank of England on the day of abandonment was barely equal to its obligations to France and the United States. Englishmen naturally thought that with a gold reserve amounting to about 4,000 million dollars, the American Government would have no apparent excuse for leaving the dollar to its fate. Besides, the invitation which Mr. Roosevelt had extended to the various nations involved an obligation on his part not to take any radical steps without awaiting for an opportunity for international understanding on the major issues.

Bad, even as Diplomacy.

When, however, the news of the eventual abandonment came on London, the City could hardly disguise its indignation and resentment. According

Air Mail Week.

to the *Financial News*, a well-known banker said: "it is nothing less than a deliberate default comparable with the Mississippi repudiation only on a much larger scale. After having thus collected 300 million dollars of hoarded gold, the American authorities could well have afforded to defend the dollar. It is the first time in history that a country with a huge reserve has deliberately decided for political purposes to suspend the gold standard." What seems to sting Britishers most is perhaps, the discourtesy in confronting Mr. MacDonald with an accomplished fact, while he was on his way to America on an invitation from the President, without giving him an opportunity to discuss matters before the fateful decision was made. Another comment was that apart from the breach of faith, it was even from a purely American point of view a great mistake to throw away "a first class bargaining counter before the beginning of the discussions." It was even held in some quarters that it would be well if Mr. MacDonald were to take the next boat back to London as there was nothing left for him to discuss at the present stage.

Activities of the "Control".

The reactions of the American abandonment on sterling are just as might be expected. The news came too late on April 19, to cause the full effects of such depreciation. There was immediately a panicky depreciation of the dollar, and a rush of selling orders but hardly anyone to buy. On the earlier days the pressure from New York was very heavy, indeed so heavy as to suggest that they were caused with the connivance of officials who were anxious to make it look that their decision to abandon gold was not taken without reference to conditions in the market. But in the face of such heavy pressure the "control" refrained from any active operations and the belief was current that the "control" was pursuing an overcautious policy. But with the buying of sterling from Paris the moment for action came. Francs were bought heavily throughout the day and the appreciation of sterling in terms of the franc was checked. But the "control" was not content with that and later carried out purchases of dollar. It is obvious that in purchasing dollar at this rate the authorities were incurring a risk for which though there might be justification, there is really no adequate defence. As for the future, opinion in London is still in an unformed state. Time alone, it is felt, will show whether an increased price level in America would react internationally in the form of a heavy slump of the dollar or in the form of a rise in world prices. But City circles are confident that if it is a question of a race in the depreciation of currencies, Great Britain would be well able to run ahead of America. For the authorities in Britain are always in a position to bring tremendous adverse pressure on sterling by buying the whole of the output of the South African mines.

Gold Purchases.

During the week, the Bank of England's policy of purchasing gold has continued. On April 18, the Bank bought £4,461,121 of gold which is the biggest purchase of the present series. The total influx for the year comes to £64,169,833.

The Argentine Trade Negotiations.

While showing herself most enthusiastic in the cause of the World Economic Conference, Britain

ORIENTAL GOVERNMENT SECURITY

LIFE ASSURANCE CO., LTD.

INCORPORATED IN INDIA 1874.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to-day stating date of birth, when full particulars will be sent to you, without obligation on your part.

Air Mail Week.

has not abated her efforts to reach separate agreements with the other nations. It is well-known that she has more intimate relations with the republic of Argenina than any other small nation. She has always been ready to place at the disposal of the Argentine Government the services of such a financial expert as Sir Otto Niemeyer. And the negotiation of a trade treaty has been one of the prime preoccupations of the British Government ever since the latter felt itself strengthened in these matters by the abandonment of the gold standard. But during the week, it would seem that the negotiations have reached a somewhat uncomfortable impasse. It is reported that fresh instructions have been issued to Dr. Roca, the head of the Argentine trade mission to Great Britain, in connection with the negotiations for a trade pact. Whatever these instructions, it is significant that opinion in Argentina is becoming more insistent that the Government shall not rush into any sort of understanding with Great Britain without weighing carefully the effects of such understanding on the finance and trade of the Republic in the future. It is felt, judging by the comments of *La Prensa* of Buenos Ayres that there are grave misgivings that any consent to the conditions demanded by the British Government would involve the republic in serious embarassment in the future. The British Government, it would seem, is inclined to stipulate that 35 per cent. of the available exchange in Buenos Ayres should, in future, be apportioned to Great Britain. The implications of this stipulation are obvious, namely, that the republic would be under obligation to expend 35 per cent. of its available foreign credits on purchases of British products. If British goods are available on the most advantageous terms, there is little or no reason for a condition of this character. If, on the other hand, some of the goods should be available on better terms from foreign countries the demand of the British Government is obviously unfair to Argentina. In agreeing to contract the £10 million loan in London with a view to thaw the frozen British credits in Buenos Ayres the Argentine Government incurs the risk of loss under a possible depreciation of the peso during the period of the loan. Against these there is little or nothing which the Argentine Government can claim to have secured from the British. The main advantage which Argentina might secure from Great Britain is the promise to relax the quota system which the British Government have evolved out of consideration alike for British agriculture and for Empire trade. On this head, however, the British have not held out any hopes and it is natural, therefore, that the organs of public opinion in Argentina should demand that the trade pact with Great Britain should not be pursued without regard to the tangible material advantages. They argue that if the exigencies of trade and politics in the two countries make it difficult to arrive at a pact, the two countries can well give up the negotiations and still continue to be friends as before.

UNITED STATES OF AMERICA.

"I have done the deed"—so might Mr. Roosevelt say at the end of the week. The pressure brought to bear on him by the inflationists, which was foreshadowed in these columns last week, had proved too strong for him. Personally, the President was inclined to proceed with the normal work of reconstruction reserving the threat of abandonment of gold standard and radical inflationary measures as a bargaining point in the discussions with the representatives of foreign powers. But the inflationists are apparently fired with the idea of rapidly increasing prices and a quick restoration of general solvency in the banking and financial system of the country. The House of Representatives is threatened with such numerous private bills that it would be difficult for any chronicler to mention them all. Mr. Henry Rainy of Ilinois has come out in favour of re-monetising silver at 16 to 1 ratio. And on April 18, he predicted that a currency inflationary programme would be pushed through by Congress during the present session, with the support of the President. In such circumstances the drift towards abandonment of gold standard and legislation to empower the President to undertake adequately inflationary measures seems irresistible. President Roosevelt, it must be said to his credit, did his best to stay the inflationist tide. He made every effort to set his own house in order before the meeting of the conference. And judging by the manner in which licenses for export of gold were granted, it would appear that the Administration was anxious to prevent violent fluctuations in the rate and had at the same time no intention of permitting unlimited gold exports for exchange purposes. There was no desire to decide with any finality the question of lifting the gold embargo completely until at least the World Economic Conference. It was not lost upon American opinion that the European nations exhibited a tendency to erect new tariff barriers on the eve of the Conference solely with a view to improve their bargaining position. The American reply would most naturally be that concessions on America's part would be made only to those who are themselves prepared to make similar concessions. In short, the attitude of President Roosevelt was that the position in every respect, either in regard to internal conditions or in regard to exchanges, should be kept well in hand without, however, making a definite decision in regard to outstanding questions. The Senate Sub-Committee was asked to hold meetings with Reserve Board officials in order to meet the objections of the Government to the Glass Banking Bill. But such efforts were of no avail; and it was clear before long that, egged on by implacable inflationists, President Roosevelt must do the deed.

The Motif of the Abandonment.

On April 19, America definitely abandoned the gold standard and foreign exchanges in New York soared upwards against the dollar. Sterling closed at 3.73 on that day after touching 3.83 and francs at 4.26 after 4.33. The President announced that the dollar would be left to find its own level in the world's markets without any help from gold movements. The export of gold in earmark or for the settlement of commercial balances alone would be permitted. In other respects, the gold embargo would be rigidly reimposed. There is considerable confusion as to the exact motive behind this precipitate abandonment of the gold standard. On the one hand is the indisputable fact that President Roosevelt had his hands forced by the inflationists. On the other is a feeling that the devaluation of the dollar on the eve of the arrival of the representatives of foreign powers would place America on a footing of equality in her discussions and bargains over the questions of the World Economic Conference. It is, indeed, fortunate for the American Administration that the needs of internal economy and finance and the requirements of diplomatic dealings with foreign powers alike suggested the same measure of abandonment of gold. But so far as foreign countries are concerned, it would make a great deal of difference to the spirit of the discussions in the conference whether America was actuated by the needs of her internal situation or by considerations of a tactical kind. In the announcement which he made on April 18, the President expressed the hope that "the release of the dollar would force the nations of the world to get together for the formula-

Air Mail Week.

tion of a common economic programme." This is an unmistakable hint that Great Britain and other countries would be more ready to consider questions of stabilisation, once it has been shown to them that the sweets of a depreciated currency cannot for long be the monopoly of any particular nation. Such a programme, the President expects, will involve the return to a new gold standard at lower parity levels than at present by non-gold standard countries in which, of course, the United States is now also included.

Inflation—The Next Step.

It must seem strange, but it is, nevertheless, true, that the President had no intention of immediately following up the abandonment of gold standard with a policy of down-right inflation at home. It is believed in circles usually well-informed that the President is opposed to expansion of currency or to the free coinage of silver. But Senator Thomas, who claims to speak on behalf of the President, spoke publicly of his being prepared to present a bill giving the President *carte blanche* to proceed with an inflationary programme which would include the reduction of the gold content of the dollar, the re-monetisation of silver and the issue of legal tender notes. There is as yet little unanimity in the measures that are being bruited from all around.

Rise in Prices.

The indecision of the Administration has mattered little to the operators in the markets. As soon as it was known that the forces of inflation were gaining ground and would prove irresistible there was a rush on the part of traders into Wall Street and prices were forced up by as much as 10 points in some shares. The turnover reached on April 19 was as high as 5,000,000 shares which is easily a record for the year. Industrials, generally speaking, gained by 7 points. Rails and agricultural stocks rose about 4 points. Nearly all commodities advanced sharply as a result of talk of inflation. Cotton futures rose 40 points, rubber futures 48 and coffee 11 points. Gold rose 2½ cents., tin futures rising 240 points and copper futures 45 points. The United States Bonds were easier but low-priced stocks firmed up and a sympathetic action was also visible later in the former. There is general satisfaction that the trend of events should have caused a revival of activity. But there is also nervousness at the wild talk of inflation current in certain circles. There is also fear regarding the schemes which are at present being discussed for controlling production and fixing minimum wage rates.

Government's Borrowing Programme.

The most significant effect of the new developments was on the government's programme of new borrowing. It is reported that Government has postponed the announcement on its new loan to next week. The uncertainty which hung last week over the Government's programme of refunding was intensified later. And certain circles are inclined to believe that the Government are afraid to resort to long-term issues. A somewhat delicate question remains to be decided regarding the inclusion of a

gold clause in the new bonds; for, it is singularly anomalous that, having refused to furnish gold in the future, the Government should consider it either fair or prudent to include such a clause. In fact, recent changes are driving the Government to a position in which they might be obliged to resort to a policy of short-term obligations. If it is remembered that in his recent campaign Mr. Roosevent denounced this very policy associated with Mr. Ogden Mill, little surprise would be felt if, at a later stage the Treasury chooses to inaugurate new issues, if only to show that the market would not be safe to rush to any specific conclusions as to the Government's financial policy.

GERMANY.

REALITY REVEALED.

Of the components of the Nazi Government Dr. Schacht stands out as an element of special significance. His antecedents leave no room for doubt that alone of the Nazis he is a man of exceptional clarity of ideas and capacity to embody them in clear-cut policies. The world has not forgotten, and never will, the single-minded drive with which he brought about the stabilisation of the mark. Nor, that sense of duty and essential honesty of understanding and purpose which impelled him to yield place on the last occasion to Dr. Luther whom he now succeeds as President of the Reichsbank. The leanings which he showed towards the end of last year, towards Herr Hitler have been universally interpreted not as political opportunism which worships the rising sun, but as the result of his burning passion to put the financial and economic system of the country on a sound basis. As on previous occasions such as his membership of the Dawes Committee or his efforts towards the restoration of the mark, Dr. Schacht's present policy consists in dispelling mercilessly the illusions that have been gathering assiduously round the financial position of the country. His decision to repay 70 million dollars out of 100 million rediscount credit granted to the Reichsbank by the leading international central banks and the Bank for International Settlements, is inspired by the anxiety that German finance should be seen in its reality instead of the trappings of borrowed credits. It is not a piece of shock tactics, as is misconceived in certain foreign circles. The object of the international credit now proposed to be returned was to maintain the 40 per cent. note cover. But what about its effect on foreign opinion? How could Germany help foreigners to realise the need for a further reduction in the rate of interest of her commercial debts? Germany, Dr. Schacht argues, cannot afford the luxury of covering her notes "ornamentally" with borrowed gold and foreign exchange which had cost the country approximately the equivalent of Rm. 55 million in foreign exchange so far. The repayment would reduce the Reichsbank holdings in gold and foreign exchange from Rm. 836 million to Rm. 542 million; and if the credit of 45 million dollars received from the Gold Discount Bank should also be deducted, the reserve would be reduced to Rm. 353 million. After all, Germany has made heroic efforts to stop the drain of capital but neither the Standstill Agreement nor the control of foreign exchange sufficed to put a stop to it. The export surplus is dwindling and, as things stand at present, it will not be long before the foreign exchange balance will prove inadequate. But, it is not correct to read in this any intention on the part of Germany not to stand by her foreign commercial debts. The maintenance of confidence in German integrity is essential for future trade relations; but if the decline in the export surplus should persist, the old problem of transfers would again rear its ugly head. It is pertinent to refer in this context to the estimates of a German banker regarding the service of the German Dawes and Young loans. The estimates show that the annual surplus of these two loans amounts to 76.5 million Rm. and 95.7 million Rm. respectively, making a total of 172.2 million Rm. The favourable trade balance for the first three months of 1933 are 22.7 million Rm. in January, 26.2 million Rm. in February and 64 million Rm. in March making a total of 112.9 million Rm.

The Lee-Higginson credit of 100 million dollars to the Reich Government has been prolonged to the end of March, 1924. The original credit was for 125 million dollars, of which 25 million dollars have already been repaid. A further sum of 20,000 dollars fell due for repayment at the end of March. From March 1, the interest was to be reduced to 5 per cent. and from October 1, to 4½ per cent.

The "free" iron and steel finishers, who are not associated with the big iron and steel concerns, have petitioned the Ministry of Economics for the reorganisation of the iron and steel industry. The finishers demand immediate abolition of the exemption of the "member" works of the big concerns from the turnover-tax; uniform control and treatment of all rolling-mill products of "member" and "free" enterprises by State Commissioners; the adjustment of the excessive inland iron and steel prices to those ruling abroad; the closing of all unprofitable "member" works with the aim of restricting the heavy industry to its proper task—namely, of producing (instead of manufacturing) iron and steel; equal purchasing prices for coal, coke, gas and electricity for both "free" and "number" works; and finally the establishment of chambers for fixing equitable freight rates for all.

HADFIELDS (INDIA) LIMITED.

NOTICE is hereby given that the Eighth Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, 12, Mission Row, Calcutta, on Tuesday, the 16th day of May, 1933, at 11-30 a.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st December, 1932, and the Balance Sheet as at that date.
2. To receive and consider the Reports of the Directors and Auditors thereon.
3. To elect a Director.
4. To appoint auditors.
5. And to transact any other ordinary business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 5th to the 16th May both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 3rd May, 1933.

FRANCE.

FRENCH REACTION TO AMERICAN DEVELOPMENTS.

The reactions of French opinion to the American developments are characteristically French. It would seem as though the whole nation has only one mind. In Britain, while the Premier puts on the best face he can over what might well be construed as a personal affront, City circles are accusing America of an unprecedented breach of faith. In France, no one does either. There is more thought of how this could be used in the further conduct of French diplomacy. The Cabinet met soon after the news of the American embargo and was before long able to announce that France had no intention of abandoning the gold standard. It was left to the newspapers to do the argument. It was for them to expatiate on the onerous burdens which France would have to carry in the shape of the international gold standard. And they are not slow to take the cue from the Government. They rub it into the Anglo-Saxon nations that if the French Government showed itself lukewarm towards the Washington talks by sending an outsider to America, its action was more than justified by President Roosevelt's edicts a few days later. Not that M. Herriot was sent to America in anticipation of the abandonment of gold. The selection of an ex-Premier who has no place in the present government suits the plans of the Government admirably well. As a rank outsider he can have no power to commit the country official to any course of action. As an ex-Premier and one of the leading politicians, he can command the requisite prestige. The Americans would take more kindly to him as one who had stood boldly for honouring his country's debts to theirs and had sacrificed power and position in that laudable cause. And as for the danger of any misconception that he is the representative of a repentant nation with the arrear millions in his pocket, an official disclaimer about his representative capacity would serve the purpose. And all the time he is away, the Press could continue to shout its scepticism in Herriot's capacity to achieve where Briand, Cailleaux and Laval had proved such sad failures.

All of which tends to prove that the conditions necessary for the successful conclusion of the World Economic Conference are still conspicuous by their absence. In France it is now common talk of the Anglo-Saxon war against gold. If the beginning of the new economic regimé is a lowering of tariff barriers, France argues, the first effect of it would be an increase in her obligations to America on account of the increased imports. The French case is, therefore simple. There is no question at present of an immediate abandonment of the gold standard. But what the future may render necessary, there is no knowing at present. What is essential is to stop this war of currencies. Let the deserters return to the fold of the gold standard at a reasonable parity; and then it would be well to discuss matters. There are some papers which suggest that M. Herriot would be well advised to book his return passage home. Altogether, France is more glad that her usual intransigence has received unexpected justification than that the prospects of the Washington talks have been rendered gloomy by the American developments.

STATISTICAL INFORMATION

FOREIGN TRADE OF BOMBAY.

The following statement shows the value of imports and exports of the principal articles of foreign trade of the Bombay Presidency for twelve months from 1st April, 1932 to 31st March, 1933, compared with the corresponding period of the preceding year:—

Imports—

	Twele months from 1st April to 31st March		Increase

SIR RAJENDRA NATH MOOKERJEE

A PERSONAL STUDY

BY

K. C. MAHINDRA

"AN inspiring biography of an inspiring personality."

COMPANY REPORTS

EAST INDIA TRAMS.

The East India Tramways Company proposes to convert all the shares into one class, to be known as Ordinary shares. The present capital totals £109,091, consisting of £100,000 issued Deferred shares, £7,524 unissued Preference and £1,567 unissued Ordinary. As explained by the Chairman at the meeting in September last (when the capital was reduced from £150,000 by repayment), the directors feel that in view of the changes in Indian affairs it is desirable to have a certain number of shares held locally, and Indian investors do not understand three classes of shares.

This conversion necessitates certain alterations in the articles of association, and it is proposed to adopt entirely new articles.

It is announced that the stocks realised to provide part of the amount required for the repayment of the Preference and Ordinary shares (£40,909) showed an increase in value, above their cost price, of over £6,000 (50 per cent. increase on the profit anticipated last September), and that after providing for this repayment the company still has securities worth upwards of £21,000.

An extra-ordinary meeting to consider the resolutions will be held at Winchester House, E.C., on 12th May, at 12-30 p.m.

INDO-CHINA STEAM NAVIGATION.

The accounts for the year 1932 shows a profit of £97,208, which with £1,050 brought forward from 1931, £13,145 transferred from buildings account, £24 from transfer fees and £1,682 from unclaimed dividends makes a sum of £113,109 available for distribution. From this £91,891 has been written off for depreciation. General charges amounted to £7,343, interest £3,061 and pensions £9,515. The balance carried forward was £1,400.

ASSAM RAILWAYS AND TRADING CO., LD.

The Company announces that the approximate total earning of the railway for the year to the middle of March amounted to Rs. 19,95,260 (against Rs. 22,05,254 in 1931-32). The colliery output was 156,462 tons (against 189,335 tons), and sales totalled 174,533 tons (against 176,394 tons). The interim dividends on the Preference shares were paid on the usual dates, but the directors were unable to declare the dividends on the "A" stock in June and December, 1932.

INDIAN GALVANIZING CO. (1926), LD.

Report for the year ended 31st December, 1932, shows a profit on Revenue Account of Rs. 17,814-15-5.

After providing Rs. 14,637-1-3 for Block Depreciation and making sundry adjustments, there remains a balance of Rs. 25,919-7-3 at credit of Profit and Loss Account. It is proposed to pay a dividend of 5 per cent. absorbing Rs. 20,525-8-0, and to carry forward the balance, *viz.*, Rs. 5,393-15-3.

The Company's Works have not been so well employed as during the previous year and work has had to be taken at unremunerative rates.

Extensions have been put in hand in the shape of additional plant for the manufacture of large drums.—Balmer, Lawrie & Co., Ld., Managing Agents. Calcutta, 18th March, 1933.

FORT GLOSTER JUTE MFG. CO., LD.

Synopsis of Balance Sheet:

Liabilities		Rs.	Assets.		Rs.
Capital	...	28,00,000	Block (net)	...	89,41,919
Debentures	...	15,00,000	Jute & Gunnies		23,10,773
Reserves	...	77,27,870	Stores	...	3,13,188
Other Debts	...	3,98,136	Outstandings	...	3,10,546
Profit & Loss	...	1,43,828	Cash	...	6,93,411
Total	...	1,25,69,837	Total	...	1,25,69,837

Extracts from Directors' Report:

Report—for the half-year ended 31st March, 1933, after writing off for Depreciation Rs. 1,50,000, shows a profit of Rs. 1,32,794-6-4, to this has to be added the balance brought forward from the last account, namely, Rs. 11,033-12-11, giving a total sum for disposal of Rs. 1,43,828-3-3. We recommend that this should be dealt with as follows:—To paying a Dividend on the Preference Shares at Rs. 3-8 per share (i.e. 7 per cent. per annum), free of Income Tax, Rs. 49,000, to paying a Dividend on the Ordinary Shares at Rs. 5 per share (i.e. 10 per cent. per annum), free of Income Tax, Rs. 70,000, to carry forward Rs. 24,828-3-3, total Rs. 1,43,828-3-3.

In accordance with the existing Agreement amongst the Members of the Indian Jute Mills Association the Company's Mills have worked 40 hours per week with 15 per cent. of the total looms sealed. A fresh Agreement restricting production to the same extent was concluded in January last and this will remain in force until 30th June, 1934.

During the early part of the half-year under review world markets were temporarily stimulated by the monetary movements which followed the conversion by the British Government of the 5 per cent. War Loan and for a short period a much better demand for manufactured goods was experienced at advancing rates. The improvement was short-lived, however, and since the turn of the year trading conditions have reverted to their former dull state and prices have steadily fallen.

With the European political situation so disturbed and the American financial crisis far from settled prospects in the immediate future are obscure and not very promising; and no permanent change seems likely until some international agreement is reached upon a policy which will remove the "debt" and "tariff" barriers which are at present strangling trade. It is to be hoped that the World Economic Conference will achieve this result.

FORT WILLIAM JUTE CO., LD.

LINGIA TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	7,00,000	Block (nett)	...	7,00,000
Reserves	...	4,25,000	Season, 1933	...	249
Drafts against shipments	...	15,756	Outstandings	...	579
Debts	...	8,198	Tea sales in suspense	...	84,965
Profit	...	1,38,961	Investments	...	4,00,117
			Cash and other balances	...	1,02,005
Total	...	12,87,915	Total	...	12,87,915

Extracts from Directors' Report:

The Directors of the Lingia Tea Company submit the audited accounts for the year ended December 31, 1932. From the undernoted summary of receipts and expenditure, it will be observed the working of the company for the period under review resulted in a profit of Rs. 89,090. Receipts:—Nett proceeds of 409,858 lbs. tea sold and partly estimated, Rs. 3,57,605; interest, Rs. 22,135; miscellaneous receipts, Rs. 1,252. Expenditure on garden, Rs. 2,49,181; in Calcutta, Rs. 37,048; less commission to managers and assistants, Rs. 5,674.

After adjustment the profit and loss account shows a balance at credit of Rs. 1,38,961 which it is proposed to deal with as follows:—To payment of a final dividend of 10 per cent. making 15 per cent. for season 1932 (free of income-tax). Rs. 70,000; to carry forward, Rs. 68,961. Assuming the scheme for regulation of exports and restriction of crop is agreed to, the following are the estimated expenditure:—Crop. 363,300 lbs.; expenditure on garden, Rs. 2,08,400; expenditure in Calcutta, Rs. 35,900; total Rs. 2,44,300. Mr. F. M. B. Lutyens retires by rotation, but, being eligible, offers himself for re-election.

HOWRAH MILLS COMPANY.

Extracts from Directors' Report:

Tht directors of the Howrah Mills Company submit the audited accounts for the half-year ended March 31, 1933. Including the sum of Rs. 2,98,408 brought forward from the previous half-year and deducting overdraft interest and all other charges, there remains a balance of Rs. 7,47,977 for disposal. From this sum there has been set aside Rs. 50,000 to depreciation, and with the balance of Rs. 6,97,977 it is proposed to deal as follows:—To payment of a dividend on 8,750 preference shares at the rate of 7 per cent. per annum, free of income-tax, Rs. 30,625. to payment of a dividend on 17,500 "A" preference shares at the rate of 7 per cent. per annum, free of income-tax, Rs. 61,250; to payment of a dividend on 262,500 ordinary shares at the rate of Rs. 1-4 per share for the half-year, free of income-tax, Rs. 3,28,125; and to carry forward the balance of Rs. 2,77,977. Jute stocks have been valued at or under cost price and stocks of goods at contract rates. During the period under review the mills have conformed to the regulations of the short-time agreement decided upon by the Indian Jute Mills Association, and have worked forty hours weekly, with the requisite quota of looms sealed.

CHAMPDANY JUTE COMPANY.

Deposits	...	6,000			
Total Rs.	...	96,82,800	Total Rs.	...	96,82,800

Extracts from Directors' Report:

The directors of the Birla Jute Manufacturing Company submit the balance-sheet and the audited statement of account for the half-year ended March 31, 1933, showing a profit of Rs. 3,41,272. After transferring Rs. 1,50,000 from reserve account and deducting Rs. 4,05,334 for interest, debenture interest, commission, depreciation, etc., and making sundry adjustments there is a balance of Rs. 85,938 at credit of profit and loss account. The directors recommend dividends on 23,636 preference shares at 7½ per cent. per annum less income-tax, Rs. 73,631; the balance Rs. 12,307, to be carried forward. Owing to continued adverse conditions in the trade during the period under review, the directors regret their inability to declare any dividend on ordinary shares. However, as conditions have improved, prospects for the current half-year are considered slightly favourable. In accordance with the agreement of the Indian Jute Mills Association the mill worked forty hours weekly 15 per cent. of the total camplement of looms sealed, the looms so sealed being 40 inches reed space and oved.

SAPOI TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	6,00,000	Block	...	8,99,089
Reserves	...	86,802	Crop A/c.	...	68,560

Profit & Loss	...	4,768	Gutstandings	...	2,225
			Cash & Invests	...	60,735
Total	...	10,45,941	Total	...	10,45,941

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a loss of Rs. 68,782-14, from which has to be deducted the credit balance brought forward from last year of Rs. 2,105-7-11, leaving a debit balance of Rs. 66,677-6-1. There being no further liability at present for income tax we have transferred from Taxation Reserve Account the sum of Rs. 6,445-11, and from Reserve Account the sum of Rs. 65,000, equal to Rs. 71,445-11, leaving an amount at credit of Profit and Loss Account of Rs. 4,768-4-11.

The above results are again disappointing but despite the still lower level of the tea market the loss was smaller than in season 1931. The average price realised for the Company's teas last season was annas 4.71 as against annas 5.66 in 1931. Expenditure showed a reduction of Rs. 47,530-13 as compared with the previous season.

The area at 31st December was 887.40 acres.

The revised estimate was for 6,300 maunds and 6,380 maunds were actually harvested.

1,001 labourers were on the garden roll at 31st December last as against 985 at the same date in the previous year. These figures are exclusive of villagers and Kacharies.

The estimate provides for a crop of 6,400 maunds at a cost of Rs. 1,66,900 as compared with Rs. 1,74,980 for the previous season. A revised estimate will be called for if agreement is reached regarding the restriction of crop this season.

Negotiations in regards to the regulation of tea exports by producers in India, Ceylon and the Netherlands East Indies are still proceeding and it is to be hoped these will be brought to a satisfactory conclusion otherwise a very pessimistic view must be taken of the Industry's future. The restriction of crop in India is also still under consideration. James Finlay & Co., Ld., Secretaries and Agents.

Extracts from Directors' Report:

The directors of the Reliance Jute Mills Company submit the audited accounts for the half-year ended March 31, 1933. Including the sum of Rs. 3,01,293 brought forward from the previous half-year and deducting debenture and overdraft interest and all other charges, there remains a balance of Rs. 6,68,663 for disposal. With this balance it is proposed to deal as follows:—To payment of a dividend on 20,000 preference shares at 7 per cent. per annum, free of income-tax, Rs. 70,000; to payment of a dividend on 165,000 ordinary shares at the rate of Rs. 2 per share for the half-year, free of income-tax, Rs. 3,30,000; and to carry forward the balance of Rs. 2,68,663. Jute stocks have been valued at or under cost price and stocks of goods at contract rates. During the period under review the mills have conformed to the regulations of the short-time agreement decided upon by the Indian Jute Mills Association, and have worked forty hours weekly, with the requisite quota of looms sealed. The 6 per cent. Second mortgage debenture amounting to Rs. 11,00,000 fell due for redemption on December 31, 1932, and is being paid off on application.

Total ...	11,71,312	Total ...	11,71,312

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

The following are comparative statistics of outturn and sales for the past three years:—

Year.	Crop.	Sale Average.
1932 ...	441,280 lb.	As. 9-4½ per lb.
1931 ...	509,600 ,,	,, 13-0½ ,, ,,
1930 ...	515,600 ,,	,, 13-0½ ,, ,,

The working of the Company for the period under review resulted in a loss of Rs. 69,264-3-3. Receipts, Rs. 2,58,693-13, Expenditure, Rs. 3,27,958-0-3, Loss Rs. 69,264-3-3.

After adjustment and transferring the above Profit and Loss Account shows a balance at debit of Rs. 43,969-0-5.

The estimates for 1933 provide for a crop of 552,000 lb. at a cost of As. 9-4¾ per lb.

DHUNSERI TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	2,53,671	Block	6,66,689
Debentures ..	3,99,800	Crop A/c ...	35,954
Other Debts ...	2,12,183	Preliminary Exps.	2,186
		Suspence A/c ...	11,979
		Outlay	14,103
		Outstanding ...	1,427
		Cash	13,092
		Profit and Loss ...	1,19,724
Total ...	8,65,154	Total ...	8,65,154

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a loss of Rs. 24,165-6-3, to which there falls to be added the balance brought forward from the previous year of Rs. 95,558-7-1, making an amount at debit of Profit and Loss Account of Rs. 1,19,723-13-4.

The Secretaries and Agents have again foregone their agency allowance and have charged interest on the Company's overdraft with them at 5 per cent. Strict economy was observed, expenditure being down by Rs. 44,323-4-9 as compared with the previous season. Taking into consideration the low level to which the tea market dropped during the year under review, it was undoubtedly this economy which resulted in a smaller loss being made than in season 1931. During the year the authorised capital of the Company was increased by the creation of 40,000 7 per cent. Cumulative Preference Shares of Rs. 3 each to enable the Company to make allotments of such shares to the Debenture-holders in accordance with the resolutions passed at meetings of the Share-holders and Debenture-holders held on 26th August, 1932. 3,993 of these shares were issued on 21st October, 1932.

Planted Area continues as 589.78 acres.

The revised estimated crop for last season, 5,000 maunds, was exceeded with the satisfactory outturn of 5,382 maunds but the average price realized was most disappointing at 4.48 annas per lb. compared with 5.75 annas for the 1931 crop.

The total labour force as at 31st December, 1932, was 678 compared with 701 at the same date in the previous year. These figures are exclusive of villagers and the labour position is satisfactory.

This provides for a crop of 5,000 maunds at a cost of Rs. 1,17,220 and represents a small reduction on last year's figure which was Rs. 1,20,583-3-0. A revised estimate will be called for if agreement is reached regarding the restriction of crop.

Negotiations in regard to the regulation of tea exports by producers in India, Ceylon and the Netherlands East Indies are still proceeding and it is to be hoped these will be brought to a satisfactory conclusion, otherwise a very pessimistic view must be taken of the Industry's future. The restriction of crop in Indias also still under consideration. James Finlay & Co., Ld., Secretaries and Agents.

TEEN ALI TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,00,000	Block ...	4,55,700
Reserve ...	1,60,000	Crop Account ...	18,352
Debts ...	15,038	Stores, etc. ...	1,761
Profit & Loss ...	11,463	Outlay ...	689
		Cash ...	9,099
Total ...	4,86,501	Total ...	4,86,501

Extracts from Directors' Report:

Report for Season 1932.

The outturn has been 4,077 maunds as compared with an estimate of 4,000 maunds and an actual crop of 3,982 maunds in 1931.

A fairly useful standard of manufacture was maintained throughout the season, but in common with the teas produced by most Assam gardens, quality was inferior to that of the previous year. The continued and increased depression of the market is, however, responsible for an average price of 6 annas 8 pies a lb. only being realized for the cop as compared with 9 annas 9 pies a lb. obtained for the previous season's teas.

No extensions were put out during the year, and the area under cultivation remains at 507.34 acres.

The receipts amounted to Rs. 1,35,941-9-5 and the expenditure to Rs. 1,34,456-12-3, showing a balance at credit of Revenue Account of Rs. 1,484-13-2. Adding to this Rs. 13,439-2-8 brought forward from the previous year, and deducting:—Income tax Rs. 2,931-13-0, Manager's Commission Rs. 74-3-9, Managing Agents' Commission Rs. 29-11, Subscription to Octavius Steel & Co., Ltd., Provident Institution Rs. 11,468-4-1 at credit of Profit and Loss Account which is carried forward.

The Estimates for Season 1933 are for a Crop of 3,311* maunds, to cost Rs. 1,36,636. 655 hands were employed on the garden at 31st December, 1932. Octavius Steel & Co., Ld., Managing Agents.

BENARES ELECTRIC LIGHT AND POWER COMPANY.

Total Rs. ...	19,73,372	Total Rs. ...	19,73,472

Extracts from Directors' Report:

The directors of the Benares Electric Light and Power Company submit the audited accounts for the half-year ended December 31, 1932. The plant has run satisfactorily during the half-year and has been maintained in good condition. The third turbo alternator was taken into commission early in March, 1933, and the total plant capacity increased to 3,750 kw. The maximum load experienced during the half-year under review was 1,200 kw. Extensions have been carried out in Lallapura, Jaitpura, Kennedy Road and Sheopur. The extensions of the area of supply to include Sheopur was approved by the Government of the United Provinces and the erection of the necessary mains is in progress. The Shree Annapurna Mills were connected in September. Mr. S. D. Gladstone has proceeded on leave to England and Mr. W. Hunter, of Messrs. Gillanders, Arbuthnot and Company, has been appointed an alternate director in his place. Mr. W. Hunter retires but, being eligible, offers himself for re-election. Mr. H. F. Bensly has also proceeded on leave to England and Mr. A. T. Taylor, of Messrs. Sandersons and Morgans, has been appointed in his place. Mr. A. T. Taylor now retires but, being eligible, offers himself for re-election. After providing for all charges including Rs. 48,497 on account of depreciation and writing off Rs. 30,000, against interest on capital during construction, preliminary expenses and brokerage on placing shares, a balance of Rs. 41,809 including Rs. 7,603 brought forward from the previous half-year, remains available which the directors recommend be disposed of as follows:—Payment of a dividend at the rate of 5 per cent. per annum free of income-tax, Rs. 32,497; carrying forward to the next half-year, Rs. 9,312.

ZENITH LIFE ASSCE. CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	50,000	Block (nett)	...	32,464

			Investments	...	8,34,770
			Cash	...	1,59,959
Total	...	11,38,284	Total	...	11,38,284

Extracts from Directors' Report:

Accounts for the year ending 31st December, 1932.

The New Business of the Company has been growing steadily year to year the Business completed last year being Rs. 23,84,500 for which policies have actually been issued by the Company.

The premium income for the year is Rs. 4,43,575 the total income being Rs. 4,88,222. With the growth of the business the income of the Company has been steadily increasing.

The Life Assurance Funds at the close of the year were Rs. 9,82,576, the addition to the funds in the year being Rs. 2,88,097. The growth of the Life Assurance Funds of the Company has been steady.

The Investments of the Company are entirely in Government of India and Sterling Securities only. Our Investments at the close of the year at Market Value were Rs. 8,34,770. Last year our Investments experienced heavy depreciation owing to the Market Value of Govern- Securities having fallen to a level unheard of before, and we had to provide an Investment Reserve Fund of Rs. 1,49,572 to cover the depreciation in full. Throughout the year 1932, all Government Securities have materially appreciated once again as anticipated and the entire depreciation provided for by us has been fully recovered. Fluctuations in Government Securities do not affect the position or the interest earnings of the Company as all investments are made only to earn safe interest and not for manipulation or business purposes.

Our investment policy is conservative, but in keeping with the principle of safety first rather than aiming at a higher margin of interest usually obtainable from stocks and shares of limited liability companies or from land mortgages both of which are fraught with danger.

Death Claims: 33 policyholders died during the year, the sums assured on them being Rs. 84,672.

Matured Policies: 19 policies matured in the year for sums assuring Rs. 50,095, the members having survived the full policy terms.

Full provision has been made in the account for all claims by death and matured policies received in the year. The claims paid during the year amount to Rs. 1,20,150. Total payment to policyholders and their heirs since the establishment of the Company now exceeds Rs. 7,00,000.

Business conditions throughout the year have been abnormal, and about the same as experienced in 1930 and 1931. General trade has been bad and the economic distress greater, both on account of retrenchment and reductions and heavier taxation coupled with higher cost of living. This has materially reflected in the increase in applications for loans and surrender values on existing policies which are far in excess of those received during normal years. We have extended every facility and assistance to our members throughout the year.

Your Directors record their appreciation of the spirit of co-operation that has characterised the efforts of all workers during the year and invite the mutual co-operation of policyholders to advance the welfare and interest of the Company.

BORPUKHURI TEA COMPANY.

Synopsis of Balance Sheet:

Liebilities.		Rs.	Asssfs.		Rs.
			Block (nett)	...	3,48,214

			Loss	...	28,213
Total Rs.	...	4,71,098	Total Rs.	...	4,71,098

Extracts from Directors' Report:

The managing agents of the Borpukhuri Tea Company (Messrs. Williamson Magor and Company) submit the audited accounts for the year ended December 31, 1932. They regret to advise that during the year just closed very low prices were obtainable on the market both in London and Calcutta. Prices have fallen so heavily that the main producing countries have devised a scheme of controlling exports to London and other outports for a period of five years, with a view to restabilising the market. This company has agreed to the scheme which is now before the respective governments whose control is required as a provision for the scheme to be initiated and continued for the period of five years. They append a summary of the season's working:—Receipts:—Nett proceeds of 307,378 lbs. tea sold and partly estimated, Rs. 1,24,768. miscellaneous receipts, Rs. 624. Expenditure:—On garden Rs. 1,01,836; in Calcutta Rs. 55,952; loss Rs. 32,396. After adjustment and transferring the above loss, the profit and loss account shows a balance at debit of Rs. 28,213. As the shareholders were advised in their circular letter of January 9 last, it was found necessary to raise an issue of debentures to cover the deficit in the balance-sheet and to provide finance for the coming season's working. The issue is not fully subscribed, and it is hoped the shareholders who have not agreed to take up their quota will do so to enable the company to be carried on. On the assumption that the schemes for restriction of crop are agreed to, the estimates for 1933 provide for a crop of 264,000 lbs. at a cost of Rs. 1,25,700 at 7 annas 7¼ pies per lb.

BAREILLY ELECTRICITY SUPPLY COMPANY.

INCORPORATED IN BENGAL IN 1919

LATEST TESTIMONIAL

"I am highly thankful to the Company for the prompt disposal of my claim within a very short time, which I did hardly expect, and for this I offer my sincere thanks.

I have been highly pleased with the dealings of the Company, and it being a purely Indian concern deserves encouragement by the people of the land."

WORLD OF INDIAN FINANCE

Saturday, May 13.

With a reduction in the weekly offer of Treasury Bills and with the purchase by the Controller of the Currency of £2 million on the sterling tender days in the last two weeks, it was to be expected that credits should be in less restricted supply in banking circles. The stringency that arose in connection with the cash loan has relaxed in some measure. The quotable rate for interbank call money is now 1½ per cent., with lenders not so scarce nor borrowers so avid. It would also appear that such congestion as was caused by the special factors connected with the cash loan was relieved by the emergence of investors on the market at the low giltedge levels reached this week, and by the lightening of the load carried by operators. Till a week ago, the market was over-bought. In the tremendous landslide that took place in the past few days, weak holders have been eliminated; and some of the bulls have also liquidated a good portion of their holdings. At the same time, a good few professional operators would appear to have made fairly heavy sales. It would, therefore, mean, on the one hand, that the over-bought position has been, in some degree, reduced; and that, in some quarters, an over-sold position has been built up. The exact position in this regard would be revealed at the Bombay Stock Exchange settlement for giltedge, which comes off on May 15. If the *budlee* payable by bulls proves cheaper than on the last two occasions, it should be inferred that there has been an appreciable rectification of the over-bought position. Be this as it may, it is clear that the demand on banks for loans against Government securities is tending to show a good falling-off. This is one of the important factors that accounts for the easier monetary conditions.

Early this week, money kept in demand at 3½ per cent. In the middle of the week, the rate had fallen to 2½ per cent. Towards the finish, business was reported at as low a level as 1½ per cent. Let it not be forgotten that Friday is, as a rule, an occasion for a more than ordinary pressure for money. It is the day immediately following the Foreign Mail. Payments in respect of accepted Treasury Bills are also due to be made on Friday. For these reasons, the money rates at the close have always tended to be firmer. On the present occasion, however, an exactly opposite phenomenon has occurred. This week's "Friday" feeling has been one of appreciable slackness.

In this connection, it is necessary to recall to mind the return of Rs. 4.18 crores in respect of the unconverted portion of 5 per cent. 1929-47 loan. The inflow of funds of this volume on May 15 should certainly remove all signs of steadiness in the money market. The middle of May is the time of the year when the monsoon months finance or the slack season may be said to begin. The slack season of this year may, therefore, come to be firmly and fully introduced by the repayment of the 1929-47 loan. Nor do we see any special reason why the progress towards cheap money should be or could be arrested. Thanks to the excess of the last cash loan over the budgetted figure, the total of floating debt should not exceed the higher limit of Rs. 28 crores assumed in the ways and means budget. This is an amount which is entirely within the capacity of the market to put up, without any inconvenience or embarassment. As a matter of fact, our own view is that the total outstanding of Treasury Bills should, over the coming weeks, be lower than Rs. 28 crores. From the point of view of fresh sales of Treasuries, the Government would not have to borrow from the market more than it can conveniently spare. Moreover, the cash position of the Secretary of State is now so strong that, at a pinch, surplus sterling assets can be lodged in the London branch of the Paper Currency Reserve, thereby enabling the Government to increase their cash balance in India. The Imperial Bank is also in a position to make advances on ways and means account for all likely requirements. From all of which, it would be seen that there would be no need for the Treasury to seek more short term accommodation from the market than it is in a position to spare. It follows that from the point of Government's Treasury Bills operations, nothing can happen to create any stringency.

At this point, however, it is necessary to refer to two important circumstances. The first is that in the Imperial Bank's statement for the week ended May 5, Public Deposits show a sharp decline by Rs. 5.58 crores to Rs. 6.92 crores. The second

factor is connected with such credit control as the authorities might consider it necessary to exercise. So far as the Treasury's cash balance with the Bank is concerned, a shrinkage in the first week of the month is not an unusual phenomenon. Of the Rs. 5.58 crores by which cash has declined, Rs. 2 crores is, perhaps, accounted for by the usual month-early requirements of the Government. Rs. 1¼ crores must be put against payments in respect of the sterling purchases. The balance represents, presumably, excess of Treasury Bills Maturities over renewals. The sharp decline in Public Deposits is not so serious as the reduction of the figure for Public Deposits to below Rs. 7 crores. With the balance reduced to so low a level, how are the Government to meet the liability of Rs. 4.17 crores in respect of the 1929-47 loan? It is quite on the cards that recourse to ways and means advances from the Bank would be had for this purpose.

From the point of view of credit control, it seems to us that the Government can well afford to let the money market find its own level without any interference in the interest of exchange. Since the exports of gold from India began on a considerable scale as from September, 1931, the tenor of the rupee-rate has been more or less independent of the season. Under ordinary conditions, exchange would be steady to firm in the busy season and quiet to weak in the slack. But as gold shipments have been a persistent feature through all the months of the year, a kind of steadiness has come to prevail, in the exchange market. It would therefore, be unnecessary that to exercise any credit control with a view to prop up exchange. Even if the rupee-rate lost a few points, there is no danger of its reaching a level at which there should be cause for concern. It is only from the point of view of Government's remittance that a decline in exchange need occasion any anxiety. But even in this regard, the Government are now placed most comfortably. The cash balance as on April 1, 1933 was £13.4 million; purchase of sterling up to date came to £4.6 million; the proceeds of this week's sterling loan would come to £12 million. The total sterling resources thus placed at the disposal of the Secretary of the State would aggregate £30 million. Allowing for the redemption of sterling loan, the balance is still sufficient to enable the Secretary of State to provide for all his commitments right up to the early part of the busy season. If, therefore, the rupee-rate slips away and reaches a level when the market is not keen on selling sterling to the Controller of the Currency, the Government can well afford to keep off the market. We should, for these reasons, look forward to a spell of really easy money in the coming slack season.

Except from the point of view of the misguided operations of the Government in regard to giltedge, the future of Government securities could be made extremely bright. We are in for a fairly longish period of cheap money. The position of Government finances, from the point of view of their borrowing activities, is on the soundest basis for the next thirty-six months. There can be no cash loan nor even any considerable conversion loan during this period. On the other hand, there is bound to be a substantial accumulation of savings which are, so to say, earmarked for investment in giltedge. Some of the big investors in sterling securities have no longer any inducement in keeping their funds so invested in London. One of the attractions enjoyed by sterling stocks till recently is in regard to the income tax. The legislation passed at the last session of the Assembly has put an end to this element of attractiveness in sterling securities. There should, therefore be a gradual and steady transfer of investment from sterling stocks to rupee stocks. Mahatma Gandhi has been released. And he has called off—though only temporarily, for the time being—the Civil Disobedience campaign. Financial, economic and political factors are all in favour of healthier giltedge in the future. But as this is a market in which sentiment plays a large part, and psychological factors count a great deal, such health for its permanence is entirely dependent upon the way in which the authorities shape their credit policy and carry out their credit operations. We have, at the present moment, a most painful example of how by wrong handling, a market which was in a fit condition for consolidation was seriously and suddenly disrupted. We hope that the Finance Member realises the serious dis-service that he has done to all those who trusted him in the case of the last loan. We do not think we are using any strong language when we say that everyone feels that he has forfeited the confidence of Indian investors. If he understands the gravity of the errors of this misfortune it is up to him to take all those measures that are necessary for the repairing of the damage done. The sterling loan was responsible for 3½ per cent. paper receding in one headlong fall to Rs. 83-4; and the 3½ per cent. 1947-50 New Loan receded to Rs. 92-8; that is Rs. 3-8 below the issue price. The news of over-subscription was, however, responsible for a fairly substantial recovery. 3½ per cent. improved to Rs. 85-10 and the New Loan to Rs. 93-8. The new sterling loan went to a premium of up to 25s; but there was a severe setback in the London market on Thursday. This led, in its turn, to Rupee securities giving way fairly sharply. At the time of writing 3½ per cent. is quoting Rs. 83-14 and the New Loan Rs. 92-12. Much will depend upon the state of affairs disclosed on the Bombay settlement on May 15. Meantime we do feel strongly that the Government should not let their face be blackened as badly as has been the case by letting a new loan drop to more than 3 per cent. discount below issue price.

The exchange market has been steady, due to monetary stringency in the early part of the week and due to the emergence of a few export bills taken on jute and hessian account in the later part. For this reason Calcutta has reported steadier conditions than Bombay. On the weekly sterling tender day tenders to the amount of £75,000 at 1s. 6 3/32d., were received and allotted in full. Tenders for £34,525,000 at 1s. 6 1/16d., were also received and alloted approximately 2⅔ percent.

The closing rates were 1s. 6 5/64d., Ready T.T.; 1s. 6 1/16d., June T.T.; 1s. 6 1/32d., July-September T.T.; 1s. 6d., October-December 15 T.T. and 1s. 5 31/32d., December-January T.T.

(*Continued on page 841.*)

(*Continued from page 819*)

will not be permanent unless we get a return to prosperity throughout the world". He emphasised that the conversations with foreign envoys were conducted with four great objectives:

Firstly, a general reduction of armaments in order to remove the fear of invasion and help in balancing budgets and reducing taxation;

Secondly, the cutting down of trade barriers;

Thirdly, the stabilization of currencies; and

Fourthly, the re-establishment of friendly relations with a greater international confidence.

Even if a large allowance is made for the exaggerations of politicians it seems fairly certain that the World Economic Conference will meet on June 12 under far more favourable auspices than any international conference ever had till now. It is well to remember that the outcome of the Conference is of interest not only to the bigger nations but to all the countries in the world and that from the humblest individual in the poorest country, all men depend even for a fair measure of personal happiness on how the representatives of the nations are able to face the problems that await their attention.

FINANCE ABROAD.

The instability of currencies and abnormal fluctuations in exchanges have become the normal happenings in international finance. During the week, the London-New York cross rate has had more than the usual fluctuations. Saturday last saw the rate mount up to the level of 4.06; and it is important that it was the first occasion since Britain abandoned the gold standard that sterling touched the level of more than 4 dollars. With our knowledge of Britain's anxiety for low sterling, it is understandable that there is little satisfaction felt at the way in which sterling is rising as against the dollar. In fact, the effect of these developments is rather to confirm the general distrust in world's currencies and to emphasise and strengthen the demand for gold. Towards the close of last week, the price of gold in the London market was found to shoot up. According to some reports buyers were prepared to pay as much as 10d. more than the sterling equivalent of the price of gold in franc. The silver market also showed great activity. There can be no doubt that speculators had, as a rule, banked much on the reports of President Roosevelt's determination to include in any scheme of the World Economic Conference measures for the rehabilitation of the white metal. The price of silver on Monday last touched 20½d. But it was obvious, then, that silver had been overdone and that before long a reverse would take place, if only because of the technical position of the market. The week-end saw a sharp drop in silver futures by as much as 105 to 130 points in New York. The London quotation on May 10, was 18 15/16d. The setback has also occured in the price of gold though for a different reason, namely, the recovery of dollar against sterling. The cross-rate is quoted 3.96¾ on May 11.

The decline in the cross-rate may perhaps, be attributed to the revival of confidence in the ability of the British Government to maintain the exchange value of sterling according to their notions of what it should be. Such revival must necessarily follow the report of Mr. Chamberlain's motion in the House of Commons authorising an increase in the Exchange Equalisation Fund from £150 million to £350 million. Though such an increase was foreshadowed in Mr. Chamberlain's speech on the budget, there was little indication of the extent to which the Fund would be increased. The markets had, doubtless, some idea of the Government's new requirements in this regard. For, the last two or three months had been a period of excessive upward pressure on sterling, the prime cause of such pressure being the lack of confidence in the dollar. There was also a general weakening of faith in the stability of other currencies. In fact, the flight of what Mr. Chamberlain has aptly called "refugee funds" to London has been a feature of international finance for nearly 4 months. During all the period, the control had been faced with the task of relieving the pressure by piling up foreign currencies and in certain cases of setting in motion forces which would tend to put up the value of francs and dollars. The "control" had thus a trying time of it; and on the whole, it has come out with flying colours. But all this has meant that the resources of the Fund have to be increased. Considering that the period of instability is by no means at an end, despite the general supposition that the talks at Washington have been unsually fruitful, it is no wonder that the British Government have decided to fortify themselves with such a large amount as 350 million dollars.

The establishment of a similar Exchange Equalisation Fund in America and the increase in the amount in England may perhaps, be thought to presage a period of somewhat bitter exchange war between the two English-speaking peoples. Apprehensions in this regard have been widely felt and adequately expressed in certain quarters in both countries. It is not yet certain whether this question forms one of those discussed between Mr. Roosevelt and Mr. MacDonald. But it is obvious that if the two funds are to operate without any agreement between them it would be a case, on the part of each of them, of digging holes and filling them. This question is discussed at greater length in our overseas columns and here we may be content to express the hope that the obscurity in this regard will be cleared up before long.

On the two sides of the Atlantic, President Roosevelt and Premier MacDonald have been proclaiming the results of their recent talks. The latter declared in a broadcast speech that as a result of the Washington discussions England and America would be going into the World Economic Conference with their hands united. In a later speech he summed up the results as below:

> "The final decision to open the international Conference on June 12:
>
> A preliminary mutual examination of the causes of the world crisis and the means of overcoming them, so that we might co-operate together and with other nations in procuring good results from the Economic Conference:
>
> A personal exchange of information regarding War Debts and an agreement that on their settlement depended the success of the work of the Conference as both Britain and America are pledged to leave no stone unturned to make the Conference a success:
>
> An understanding on how to co-operate in trying to bring the Disarmament Conference to a successful issue; and a general improvement of the friendly relation and mutual esteem of the two countries, so that influences making for peace, confidence, and appeasement of the world had been undoubtedly strengthened."

President Roosevelt has also been doing his best to create an atmosphere of optimism in regard to the outcome of the World Economic Conference. He related the crisis at home and the measures he had take to restore normal conditions with the task of making the World Economic Conference a success. But like the true international that he is, Mr. Roosevelt has taken care not to let American opinion persuade itself that America has less interest in a concerted international programme for revival than the rest of the world. "We can most probably", declared the President, "get a fair measure of prosperity to return again in the United States; but it

(*Continued on page 818*)

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1 crore of three months Treasury Bills were opened on Tuesday, May 9. The total amount offered was Rs. 1,30,00,000. Tenders at Rs. 99-11-3 and above were accepted in full and those at Rs. 99-11 were allotted approximately 71 per cent. The total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 1-3 per annum.

Tenders for Rs. 1 crore of three months Treasury Bills will be received on Tuesday, May 16. Successful tenderers should make payment on Friday, May 19. Other conditions are as usual.

STERLING TENDERS.

The Controller of the Currency notifies that yesterday, tenders to the amount of £75,000 at 1s. 6 3/32d. were received and allotted in full. Tenders for £34,525,000 at 1s. 6 1/16d. were also received and allotted approximately 2⅔ per cent.

On Wednesday, May 17, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 31st March, 1933, amounted to £40,000,000 and was held in the following form:—

	£
1. Cash at short notice at the Bank of England	897
2. British Treasury Bills	16,251,612
3. Other British and Dominion Government Securities	9,969,157
4. Gold—	
In England	2,152,334
In India	11,626,000

Pig Iron, Blooms, Billets, Rails, Fishplates, Tie Bars, Sleepers, Joists, Angles, Channels, Tees, Rounds, Squares, Flats Octagons, Plates, Black Sheets, Galvanised Plain and Corrugated Sheets, Agricultural Implements and Hardware Tools.

Agents & Stockyards throughout India :

THE TATA IRON & STEEL CO., LTD.

Sales Office : 100, CLIVE STREET, CALCUTTA.

Telegrams :— "IRONCO

CALCUTTA SHARE MARKET.

Jute.—Conditions were dull in this section during the period under review. The recent activity in bigger denominations was not so noticeable while speculative counters were fairly steady. Howrahs opened at Rs. 47-12, improved As. 8 to Rs. 48-4 and were dealt ex-dividend at Rs. 46-10. Kamarhattys after touching Rs. 466 receded to Rs. 460. The hessian market was quiet but steady on Monday but subsequently steadied up on renewed interest in 11 porters, and some near covering activity. Owing to satisfactory growth of plants in jute growing areas, raw jute was unchanged round about Rs. 29-8 and among bigger denominations, Anglo-Indias were steady at Rs. 328, Aucklands were lower at Rs. 188, Barnagores were popular at Rs. 140, while Ballys opening at Rs. 140 improved to Rs. 145 but again declined to Rs. 142. Clives on rumours of As. 4 dividend were quiet but steady at Rs. 26-4. Dalhousies were placed at Rs. 375, Empires had sellers at Rs. 37-8, without many buyers. Kardahs came to business at Rs. 442, and later at Rs. 447, Kanknarrahs had sellers and they were dealt at Rs. 330 and later at Rs. 325. Reliance was wanted at Rs. 71, and were dealt at Rs. 68-8 ex-dividend. Cheviots had sellers at Rs. 225 while Lothians were placed at Rs. 273, Fort William on report of Rs. 5 dividend were dealt at Rs. 253, while Hukumchand had plenty of sellers at Rs. 17-12. Nationals were steady at Rs. 22-8, while Presidencys were quiet at Rs. 5-12. With the prevailing price of hessians and raw jute, the margin of profit to the mills is fairly good and the position of the industry is sound.

Cotton.—After the recent spurt this section was again quiet and prices gave way. Kesorams slipped back to Rs. 3-10 while there were sellers of Bengal Nagpurs at Rs. 22-8 without attracting buyers. A solitary deal took place in Muir Mills at Rs. 242-8 and in New Rings at Rs. 68. Elgin Mills (Pref.) 8% were placed at Rs. 100.

Coal.—More activity has been noticeable in this section and some investors are taking advantage of lower prices. A fair turnover resulted in Burrakur coal roundabout Rs. 10-8, while Bengals were lower at Rs. 218. Bengal Bhatdees came to business after a long time at Re. 1-4 while Bengal Giridihs were dealt at Rs. 1-4. Equitables had sellers at Rs. 17 while Raneegunge improved to Rs. 32. Seebpores were wanted at Rs. 12-8 premium without many sellers, East Indians were dealt at Rs. 12-10, North Damudas Rs. 3-4, Talchers Rs. 1-8, Rewas Rs. 7-4, while Standards were lower at Rs. 22-14. Amalgamateds were wanted at Rs. 13-10 on rumours of improved dividend.

Miscellaneous.—This section was more popular and a fairly large turnover resulted. Among mining shares Tavoy tins were dealt at Rs. 3-12 while Burma Corporation were steady roundabout Rs. 8-6, Karanpura development were placed at Rs. 8, Bengal Aerating Gas was wanted at Rs. 66-8, while Bengal Chemicals were firm at Rs. 296. Among Electric shares, there was good enquiry for Agras at Rs. 91, Benares at Rs. 12, Patnas Rs. 13-2, Daccas Rs. 15-2, Muzuffarpores and Muttras came to business at Rs. 9-8 and Rs. 8-2 respectively. Bengal Telephone had buyers at Rs. 14-14. Indian Irons were steady at Rs. 5-10, while Hooghly flours were wanted at Rs. 14-8, without any sellers. Triton Insurance were wanted at Rs. 169 without many sellers, B.I.C. (Ordy.) were easy at Rs. 13-1, while Calcutta Ice Association were dealt at Rs. 7. A parcel of India Generals changed hands at Rs. 92 while Port Shipping had buyers at Rs. 11-4. British Ceylon changed hands at Rs. 7. Among sugar shares, prices were well maintained. Balarampurs were wanted at Rs. 11-10, Champarans, Cawnpores, New Savans and Samastipores were steady at last week's levels.

Banks & Railways.—Very few deals took place in Light Railways during this week. Bukhtiarpur-Behar Light Railway were dealt at Rs. 75 while Shadara (Delhi)-Saharanpur came to business at Rs. 110. Katakhal Lalbazar were placed at Rs. 75 and Mymensingh Bhairabbazar guaranteed at Rs. 84. Central Banks were dealt at Rs. 22-4, Imperial Banks fully paids and Contributories were steady at Rs. 1,235 and Rs. 298-8.

Government Securities.—The price of 3½% G. P. Notes heavily dropped during the course of this week. In the earlier part of the week, lack of support and heavy bear sales brought down prices to Rs. 85-6 but at the close on Monday there was some recovery and prices improved to Rs. 85-12. 1960-70 eased to Rs. 97-4, while the New Loan was dealt at Rs. 94-4. On Bombay advices prices gave way further and opening at Rs. 85 on Tuesday prices advanced to Rs. 85-12, but again relapsed to Rs. 85. On Wednesday the announcement of 4% Sterling Loan at £97-10 for £12 millions had a most depressing effect on the market and 3½% depressed to Rs. 83-6, New Loan to Rs. 92-4 and 1960-70 to Rs. 95 but a sharp recovery took place at the close and prices improved to Rs. 85-8, Rs. 93-8 and Rs. 96-8. The £12 million Sterling Loan was oversubscribed after the opening of the list within half an hour. This will have a steadying effect on the local market also and with the money shortly to be released by payment of 1929-47 loan which will seek reinvestment, high prices are likely.

Tea.—This section was fairly steady and business appears to be expanding at increasing prices. Bishnauths were placed at Rs. 20-4, Dauracharas at Rs. 7, Dufflagurs at Rs. 10-12, East Indias Rs. 11-4, Hathikhiras Rs. 12-8, Moheemas Rs. 11-6, Teesta Valley at Rs. 30, Tumsong Rs. 21-2, Choonabutti Rs. 373, Huldibari Rs. 18-4, Jaybirpara Rs. 16, Tengpani Rs. 12-4, and Dimakusi Rs. 18-4. The closing tone of the market was steady.

JUTE AND JUTE GOODS.

JUTE.

The jute market during the week under review has remained steady with shippers showing moderate interest at improved rates. Business for Ready Firsts was put through for a large number of bales at prices ranging between Rs. 28-12 to Rs. 29-12. Sowing reports are on the whole favourable and the condition of the crop is reported to be fairly good. Some damage has however been caused at Dinajpur by heavy hail storm. Sowings which are reported to have been practically completed are in the vicinity of 17 annas as compared to 16 annas of the last season. The Futures Market has also fully reflected the strength of the shippers market and prices ruled between Rs. 29 and Rs. 30-8. Balers have covered a considerable quantity of their sales on the Futures, and the market looks anything but weak. Due to the steadiness in the manufactures section, speculators are holding firmly to their purchases inspite of the very near approach of the delivery time. But for the probability of a slight set-back on the eve of the delivery time, the market seems to be very healthy and likely to improve after the May deliveries on the Futures Market are over.

HESSIANS.

The Hessians market during the week under review has again been very steady and the rates show a slight improvement over those of last week. There has been a steady demand from the consuming centres and shippers have been free buyers for both ready and forward positions, with mills only selling in small quantities now and then. The strength of the Cotton market in America and the bullish sentiment prevailing there due to the inflation polcy of the Government has imparted, further strength to the speculators who are taking considerable interest in this section. The only weak spot on the position is the lack of demand for bags, which factor may at any time cause uneasiness and bring about an unexpected fall in the price of Hessians which otherwise should continue to remain steady. At any rate taking every thing into consideration, the statistical position of Hessian is fairly sound and prices are likely to improve slowly but steadily as business in America expands. The highest rate of 40″×8 oz. Hessians for August on Hessian Exchange during teh week was Rs. 9-11 and the lowest Rs. 9-5.

JUTE.

Crop Statistics:—

	Season 1932-33	Season 1931-32	Increase or Decrease

JUTE CROP.

Messrs. Sinclair Murray & Co., in their jute crop report for the week ended May 6, say:—

General.—Weather conditions have been favourable and sowings in Eastern Bengal have been completed and are estimated overhead to be approximately 17 annas as against 10 annas last year. Condition of plants satisfactory. Weeding going on freely as required.

Narayanganj.—Sowings 16 annas completed. Weather has continued favourable and apart from a certain amount of irregular growth on the lowlands the crop is in good condition. Plants range in height up to 3 ft. 6 ins. River is about 1½ ft. lower than at this date last year.

Chandpur.—Sowings 18 annas completed. Conditions have been favourable and the crop has made good progress. Plants are healthy and range in height up to 3 ft. 9 ins. River is slightly lower than at this date last year.

Chaumuhani.—Sowings 18 annas completed. Weather has been favourable and conditions are satisfactory. Plants range in height up to 4 ft.

Akhaura.—Sowing 17 annas completed. Weather conditions have been satisfactory. Plants are healthy and range in height up to 2 ft. 3 ins. River is slightly lower than at this date last year.

Niklidampara.—Sowings 15 annas completed. Favourable weather conditions have prevailed during the week. Plants are healthy and range in height up to 1 ft. 6 ins. River has fallen during the week and is now estimated to be 3 ft. lower than at this date last year.

Sarishabari.—Sowings 17 annas completed. Conditions have been satisfactory and plants range in height up to 3 ft. River is about 1 ft. lower than at this date last year.

Mymensingh.—Sowings 17 annas completed. Weather has been favourable. Condition of plants satisfactory and they range in height up to 3 ft.

Serajgunge.—Sowings 18 annas completed. Weather has been favourable and the condition of the crop is satisfactory. Plants range in height up to 2 ft. 6 ins. River is about 1½ ft. lower than at this date last year.

Bhangora.—Sowings to date 14 annas. Weather has been favourable. Condition of plants satisfactory and they range in height up to 2 ft. River is slightly higher than at this date last year.

Madaripore.—Sowings 16 annas (including Mesta) completed. Weather during the week has been favourable, conditions are satisfactory. Plants range in height up to 3 ft. 2 ins. Mesta up to 4 ft. 8 ins. River is slightly lower than at this date last year.

As a basis of comparison we take last season's crop as 16 annas.

COTTON AND COTTON GOODS

COTTON.

During the week under review, specially towards the close of the week, the cotton market in Bombay has ruled very steady with a sharp advance in price. The reports about the passage of the Farm relief Bill in the Senate and the following trade demand had had a very healthy effect on the market. Broach April-May, 1934, has gone up to Rs. 221 while the July-August quotations have touched Rs. 205.

The reaction in the markets has proved short-lived, good demand appearing at every decline. Support is lent to the market by the bullish sentiment prevailing in America that the Relief Bill intends curtailing of planted and unplanted acreage. The liquidation is fully absorbed by trade and outside buying. On the top of it there has been heavy trade buying due to the better offtake of dry goods in America. Crop preparations are delayed and the general bull sentiment prevailing in the American markets, have brought out new buyers. The market is responding favourably to bull sentiment and shows a clearly healthy indication for future. The opinion of the experts in the trade is for a higher market still and buying at all reactions is advised.

The following are the latest prices available :—

PIECEGOODS.

After a comparatively more active week, the week under review has been again dull with an easier feeling in the market. The activity that was noticeable during the previous week on account of the steadier condition of cotton all over, was followed by a better offtake. The improvement in the offtake was due to no special features but merely on account of the fact that dealers are carrying small stocks everywhere and now and again they need to replenish them. The activity noticeable from time to time is only a temporary one since the actual results it brings is only a purchase for absolutely minimum requirements. Small fresh business has been reported in Lancashire whites and dhooties ; there being practically no new business to report in Japanese or Indian goods. The demand for spot Japanese goods is comparatively better mainly due to its cheapness and the values for spot being lower than the import parity.

Bombay.

The conditions in Bombay market could be summed up in the phrase that the trade is at a standstill. There has been very little business in Indian piecegoods. Fresh business in Japanese piecegoods has been recently negotiated in spite of a slightly rising exchange.

Yarn.

Due to the passing of the Farm Relief Bill in U.S.A. the cotton prices have gone up. In sympathy with cotton the yarn markets in Calcutta, Bombay and Ahmedabad have also gone up. The enhancement in price has made the mills unwilling to make sales at old rates, but the enquiries from the consuming centres are very poor. The poor sales of piecegoods, mill-made or hand-woven is very poor, and most of the weavers are leaving their jobs and taking to new ones. Stocks of Indian yarn are considerably larger than what they were sometime ago. There has not been much change either in the price or demand of English and Japanese yarns. The price in Japan are slightly higher than the import parity.

BULLION

Gold.—There have been fairly wide fluctuations in the local gold market prices ranging between Rs. 30-12 and Rs. 30-4. The fluctuations have been mainly caused by and in proportion to those in the London-Paris cross-rate. With every rise in the price of Gold the arrivals of distress gold show an improvement. The exports per S. S. "Mooltan" have come up to near Rs. 1 crore. Stocks in Bombay market are estimated at about three lakhs of tolas with a daily average of about 2,000 tolas.

London.—During the Air Mail week the market in London was steady, prices ranging between 119 sh. 3d. and 121sh. per fine ounce. The daily amounts of gold offering in the open market were very small. £1 million was taken for a destination not disclosed, other small quantities being absorbed on Continental account.

The Bank of England gold reserves against notes amounted to £186,900,000 on the 3rd May, as agoinst £186,800,000 on the previous Wednesday, showing an increase of £100,000 during the week.

The opinion of informed people in London has been that the fears of the value of gold falling down are unfounded. There is and will always be a demand for gold and the price of gold is more likely to go up than down.

The price of gold per fine ounce during the week was as follows:—

May 5	...	124sh. 8d.
May 6	...	124sh. 1d.
May 8	...	124sh. 1d.
May 9	...	123sh. 4d.
May 10	...	123sh. 4d.
May 11	...	123sh. 6d.

The quotations for Mint Gold Ready at Bombay during the week were:—

	Rs.	A.	P.
May 5 ...	30	11	9
May 9 ...	30	7	0
May 10 ...	30	8	0
May 11 ...	30	8	3

The following were the United Kingdom imports and exports of gold registered from mid-day on the 15th instant to mid-day on the 24th instant:—

Imports.

	£
Germany	4,803,276
British South Africa	1,060,973
British West Africa	62,843
British India	898,954
British Malaya	49,431
Hong Kong	12,880
Netherlands	64,624
France	410,496

Netherlands	462,850
France	626,986
Switzerland	169,039
Austria	13,465
Czechoslovakia	18,560
Other countries	6,576
Total ...	1,297,476

SILVER.

During the week under review the market has ruled quieter and easy in absence of fresh buying support. Values in the London market have dropped from 19⅜d., to 18 15/16d., per oz. The latest New York price available was 34⅛ cents. Continent has again sold heavily, American and Chinese speculators having bought at the decline. Local prices have fallen by a rupee and are below the import parity again. The holders of silver both in America and India are very firm in their ideas at the moment. They are fully confident that before or during the meeting of the World Economic Conference next week, in London, the question of silver stabilisation will be finally settled. On this hope they are carrying long, and instead of becoming nervous at declines, and unloading their holdings, they came out as buyers at every decline. But unless a real support is immediately given to the market, the holders will not be able to carry long and in the latter case an undesirable reaction may set in. But the latest reports that are available from U.S.A. regarding the passage of the Farm Relief Bill, and the consequent rise in the price of commodities there, and the healthy gesture about the Moratorium on War Debts have lent a fresh strength to the Silver markets, both in London as well as in Calcutta. It appears therefore that the silver market at the moment can carry on very well, and buying at every crash will be desirable.

Quotations for bar silver ready at Bombay during the week were as follows:—

	Rs.	A.	P.
May 5	58	3	0
,, 9	58	1	0
,, 10	57	14	0
,, 11	58	4	0

In the Local market the price of Silver had fallen to Rs. 58-4 during the middle of the week, but has since recovered and stands at Rs. 59. The adverse effect of the rise, is already showing itself prominently. Distress Silver is again appearing in the market in fairly large quantities. Daily offtake has dwindled down to about 20 bars, and stocks are accumulating in both Bombay and Calcutta markets. Imports of Silver continue to remain very poor, while exports are once again active. According to the return of the Bombay Chamber of Commerce silver of about Rs. 23 lakhs has been exported during the week ending May 4.

London.—During the Air Mail Week the Silver market in London was subjected to severe pressure from U.S.A. Further reports as to the legislative measures authorising the acceptance of Silver in payment of War debts served to accentuate the demand and a general speculatice interest was created and a good demand from America and speculators has followed.

Quotations rose sharply to 20½d., later reaching to 18⅝d. China exchanges have consistently failed to respond to the successive rise in silver prices and sales from this quarter have consisted in the main of profit-taking transactions. The Indian bazaar also resold, whilst moderate sales were effected by the Continent also. The important feature of the Week was the extensive exports of Silver to New York weighing about three and a quarter million ounces.

The following were the exports and Imports of Silver in London between April 15 and 24.

Imports.

	£
Germany	24,264
Belgium	2,300

TEA AND COFFEE

TEA.

There was no sale in Calcutta in this week.

LONDON TEA SALES.

London.—At the London auctions on May 4, 12,900 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition. The demand for Tippy teas, except for poorer liquoring Tippys and commons was steady. Fannings and Orange Pekoe teas showed some irregularity.

The following are the lowest prices fetched during the day's auction:—

Common Pekoe last auction 5¾d., to-day's auction 5¾d. lb.; Common Broken Pekoe last auction 5½d., to-day's auction 4¾d. lb.; Common Orange Pekoe last auction 6½d., to-day's auction 6½d. lb.; Common Broken Orange Pekoe last auction 6d., to-day's auction 6¼d. lb.; Common Broken Pekoe Souchong last auction 5¾d., to-day's auction 5¾d. lb. The following are the value prices:—Clean Common Pekoe last auction 6d., to-day's auction 6d. lb.; Clean Common Broken Pekoe last auction 5⅞d., to-day's auction 5⅞d. lb.; Clean Common Orange Pekoe last auction 6⅜d., to-day's auction 6⅜d. lb.; Clean Common Broken Orange Pekoe last auction 6¼d., to-day's auction 6¼d. lb.; Clean Common Broken Pekoe Souchong last auction 5¾d., to-day's auction 5¾d. lb.

Indian Tea (Northern) last week 9.56d., this week 9.43d. lb.; Indian Tea (Southern) last week 10.37d., this week 11.22d. lb.; Ceylon Tea last week 11.47d., this week 11.35d. lb.; Java Tea last week 7.73d., this week 7.10d. lb.; Sumatra Tea last week 6.45d., this week 6.38d. lb.

Tea Quantities for Sale this Week.—Indian; 51,400 packages of which 49,300 are on garden account; Ceylon 27,500 packages of which 27,200 are on garden account. 15,600 packages of Java and Sumatra tea will be offered for sale next week.

At the London Auctions this week, common Indian Tea seems to have fallen in the favour of the market. Prices for those kinds have gone down to the lowest levels possible. Medium varieties showed very little change, and good tea was in fair demand, the quantity on offer of the latter being limited.

The weekly sale of tea on May 8, comprised 51,396 packages of Indian 27,472 packages of Ceylon and 15,592 packages of Java teas.

At the London auctions 23,700 packages of Indian tea were submitted for sale.

Demand was rather better with the tone firm but there was little change in values.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	7½d.	7¾d.
,, Broken Pekoe	7½d.	7¾d.
,, Orange Pekoe	7½d.	8d.
,, Broken Orange Pekoe ...	7½d.	7¾d.
,, B. P. Souchong	7¾d.	7¾d.
The following are the value prices:—		
Clean Common Pekoe	7¾d.	7¾d.
,, ,, Broken Pekoe ...	8d.	8d.
,, ,, Orange Pekoe ...	8d.	8d.
,, ,, B. O. Pekoe ...	8¼d.	8¼d.
,, ,, B. P. Souchong ...	8d.	8d.

COFFEE.

Mangalore.

According to the reports available the market was slightly easy during the week under review. Plantations assortment was sold at Rs. 46-4, Triage at Rs. 35 and Peaberry at Rs. 56-8.

London.

The market in New York has been a shade firmer during the Air Mail week. At the London auctions finer qualities were readily sold, other grades being irregular. Stocks in London were:

SUGAR

The market during the week under review has ruled steadier, without any change in quotations. Offers and stocks are getting small and this has been mainly responsible for the steadier feeling prevalent in the market. It is believed that imports of Java sugar may show an improvement in the following months. The local price of Java sugar is below the import parity. Java sellers in view of the rise in sugar prices in other parts of the globe are unwilling to lower their selling units. Should the Indian sugar offers continue poor as they are at the moment, and if the exchange does not move in favour of Java, the Indian price of Java sugar may go up in the course of the next few months. There is one fact which we cannot lose sight of and that is that stocks in Java are over 2.5 million tons against 1.6 millions this time last year. But it can be counterbalanced by the fact that the estimates of the next crop are only 1.3 million tons which is much smaller when compared with the previous years.

London.

There was a slight setback in the London market during the Air Mail week. The latest quotations are

London Fine White Java C. and F. Calcutta	...	7sh.	6d.
Calcutta Java White Ready	... Rs.	10	4 0
,, Indian	... ,,	10	1 0

Stocks are estimated at 239 thousand tons against 87 thousand tons a year ago.

Bombay.

The tone of the market was weak in the earlier part of the week, later on steadying towards the close. The weakness in the earlier part was due to the forced sales of goods to arrives. The tendency of the market is to rule steady for near arrivals, as well as for forwards. The only disturbing factor in the market is the uncertainty of exchange.

Cawnpore.

The conditions in the Cawnpore market were steady, secondhand dealers offering an anna lower to get dispatching instructions. Some activity was displayed towards the close of the week for deliveries extending up to August next.

Java Exports

The total exports from Java during February, 1933, amounted to 85 thousand tons as against 138 thousand tons in the same month 1932. The shipment to India was 23,000 tons in February, 1933, against 54,000 during the same month in 1932.

World Consumption.

Although a larger reduction in the world consumption of sugar was anticipated, the actual reduction has been only 7 per cent. in 1931. The consumption of U.S.A. showing a decrease of 4.7 per cent. only. The total world consumption during 1932 is thus estimated at 24.5 million tons as against 26.4 in 1931. The consumption of 1933 may show a further decline compared with 1932 but it must also be borne in mind that the production of 1933 is also less by 4 million tons as compared with the peak years.

(*a*) *Despatches*—

,, 1932	170,497	...	61	625	171,183

(*Continued on page 835*).

GRAIN AND SEEDS

WHEAT.

During the week under review the market has ruled steady, the change in rates being almost negligible. The continued showers of rain in the Punjab and U.P. have done damage to the harvested crop, and values in all interior centres have shown improvement, with more unwillingness on the part of the holders to sell holdings. The recent rise in the price of wheat in U.S.A. and that of grains in general in Europe had had a very healthy effect on the local price of wheat. The disparity between the world wheat prices and those ruling in India has considerably narrowed down, and 5 to 6 per cent. further rise in the values of wheat in U.K. will make exports from India possible, thus lending further strength to the market.

As previously reported in these columns, the condition of the winter wheat crop in U.S.A. was quite unsatisfactory and the sowings were also poor. Now the reports so far available for spring wheat go to show that weather conditions are far from satisfactory and this crop is also estimated to be poor. Canada and Australia have already marketed a major portion of their exportable surplus and are thus not considered depressing factors at the moment. Russia which used to export in former years is believed to be an importer this season. Taking all these factors into consideration the prospects for wheat are quite good and buyers at declines can be assured of small profits every time. The position of spot is also satisfactory, the offtake of the flour showing an improvement recently.

Foreign.

During the Air Mail week, the international wheat markets have again ruled steady. The policy of U.S.A. Government, designed to raise prices, was reflected in a further advance of wheat quotations in that country. Values in Chicago and Liverpool have shown an increase over the previous week. Shipments of both wheat and flour are better during the week under review as compared with the previous week. The markets for Barley, Oats and Maize have shown a better tendency with a better trade enquiry and better offtake.

The visible supply of wheat in Canada is 93 million bushels or 4 million less than the previous week. Supplies a year ago stood at 71 million bushels.

The latest quotations are:—

Chicago (May) per Bushel ...		$0.69⅝
Liverpool:		
Rosafe		22s. 9d.
Baruso		22s. 7½d.
Australian (South) ...		25s. 3d.
Calcutta:		
Cawnpore & Punjab Ready ...	Rs.	3 9 0
May Beta	,,	3 9 0
Indian crop in 1932-33 ...		9,120,000 tons.
Imports into India of foreign Wheat during week ending May 6, 1933		Nil.
Exports from India during week ending May 6, 1933 ...		17 tons.
Exports from India during corresponding week of 1932		38 tons.

RICE.

The market in Rangoon during the period under review has ruled steady with a general improvement in prices. The bears have come out to cover on better enquiries from Hongkong markets. Following the lead of Rangoon the values in the local market have also improved by about four annas per maund.

The quotations are:—

Big Mill Specials ...	... Rs.	165 to 167-8
Small Mills ...	... ,,	177 to 180-0
Meedone ...	... ,,	190 to 192-8
Boiled Rice ...	... ,,	207 to 217-8
Paddy ...	... ,,	62 to 65-0

London.

The position in the London market was much healthier during the Air Mail week. There was not much change in spot quotations, forward positions being slightly higher. Spot prices are at 7s. 3d., against 7s. 4½d., a week ago. Forwards are, however, quoting 6s. 8d., against 6s. 5d., a week ego. Stocks in London are estimated at about 2,400 tons against 1,300 tons a year ago.

OTHER MARKETS

FREIGHT.

The market during the week under review has ruled quiet without any change in quotations at the U.K. liners conference.

Quotations are:

AN OMNIBUS EDITION!

MAHATMA GANDHI'S

SPEECHES AND WRITINGS

The volume begins with the South African Indian question and contains besides his jail experiences in South Africa and India, his *Young India* and *Nava Jivan* articles on *Satyagraha* and the Non-Co-operation Movements. It also includes Mahatma Gandhi's famous Letters to successive Viceroys, his historic Statement before the Court at the great trial, his Congress Presidential Address and other public utterances, his Speeches and Messages during his great march to the Salt pans of Dandi, the full text of his Agreement with Lord Irwin and the Speeches implementing the Pact. Then there are his Speeches at the Round Table Conference followed by the Willingdom-Gandhi correspondence, the Hindu-Muslim question, as also the Statements on the Problem of Untouchability following the Epic Fast. Yet another Section gives his reminiscences of great Indians like Gokhale, Mehta, Tilak, Das, Nehru, etc. The last Section contains chapters on subjects of miscellaneous interest ending with his famous gramophone record on God.

With numerous Illustrations and an Index.

CLOTH BOUND. OVER 1000 PAGES.

Rs. 4. To Subs. of the *"I. R."* Rs. 3-8 as.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

A MISERABLE BUSINESS.

As we survey the events of the past fortnight in the giltedge market, especially in the light of the optimistic comments that we made in the Special Supplement issued on the eve of the last Rupee Loan, we are filled with chagrin not unmixed with profound humiliation. We were foolhardy enough to suggest that the then-assured success of the cash section of the loan would inaugurate a new and striking era in the Indian giltedge market. We examined the technical position as regards the ways and means problems of the Treasury over the next three years and came to the view that if both the cash and conversion loans proved overwhelming successes—and there was every indication that they would prove overwhelming successes—this should lead to a final and triumphant phase of the conversion plan, there being, as a consequence, no need for any cash loan or even a conversion loan right up to the end of 1935-36. On this interpretation of the ways and means problems confronting the Government, we drew the conclusion that, over the next three years, there should prevail a definite and continued buoyancy in Rupee giltedge securities. In our vision of the future, we were carried so far as to believe that 3½ per cent. Rupee Paper might well come near par in the not distant future. Our forecast of a new and glorious era looks ludicrous in the light of the devastation and disruption that has taken place since the last month-end. Our imagination inspired hope of 3½ per cent. Rupee Paper touching par stands out in cruel contrast to the hard and unpalatable fact of that very paper losing over five points in less than five days. Whatever may be the ultimate trend and tenor of giltedge in the three-year period covered by our analysis, the events in the days immediately following our foolhardy prophecy are calculated to mock and taunt us with a total lack of moderation in our comments on the New Loan and its prospects and its effects.

* * *

Our humiliation at this disastrous turn of events is profound but our pain that a large body of our readers have suffered as a result of the lead given by us is even more intense. We ourselves had no idea that the views and opinions advanced in these columns as regards giltedge had come to be accepted as a reliable guide to such an extent that a large number of operators, professionals and amateurs, had entered into commitments in the full confidence that developments would plan out as forecasted by *Indian Finance*. So long as the market was advancing from strength to strength, exactly as *Indian Finance* had indicated in all the sixteen months prior to May, we had no occasion to know that there was such a large following behind *Indian Finance* amongst operators in the market. In the last few days, when the reverses were sharp and sudden and heavy, we have been pulled up by countless readers partly with a view to enquire whether our view still held good and partly to admonish us for the mess into which the lead we gave had got them into. We have, ever, realised that a special responsibility rests on a financial paper. We have always tried to examine each question in all its aspects; to come to our conclusions only after a proper scrutiny of all relevant factors; and to put forward our conclusions as dependent on the main assumption that the policy and operations of the authorities concerned are scientific and in accordance with time, place, circumstance and sentiment. Fully conscious of our responsibility in this behalf, we would not have indulged in a rosy vision of the future except that we were thoroughly convinced that every condition was propitious for the materialisation of such bright hopes. May we urge that in whatever analysis we furnished as regards the technical position of the giltedge market, now or hereafter, we have stated the full facts of the situation without any reserve; that on such an analysis, there can be no two opinions as regards assured bright prospects for giltedge in India; and that the setback that has taken place is due to factors outside and beyond that analysis?

* * *

The factors that brought about the present disruption are, in the first instance, the bungle of the Government in giving full allotment to the applications paid in cash in respect of the cash section of the 3½ per cent. 1947-50 loan; and, in the second place, the breach of faith on the part of the authorities towards Indian investors involved in their coming out with a 4 per cent. loan at Rs. 97½ in London within ten days of a 3½ per cent. loan at Rs. 96 in India. We maintain that but for this bungle and but for this letting down of the Indian investors—actions for which the entire responsibility is with the Government—the tenor of giltedge to-day should be more or less on the lines suggested by us on the eve of the Rupee Loan. The mistake we committed was not in respect of our analysis of the giltedge situation, but in our facile faith that the Government could be relied on for a consistent pursuit of a correct and scientific credit policy. The policy of the authorities in the past few months was such as to win our approbation. This policy had resulted in the consolidation of the Indian giltedge market. This policy had re-established the confidence of investors in government securities. We made the assumption that there would be no departure from such a policy. We regret that this assumption has proved wrong. If we are blameworthy, the main blame on our part is that we forgot the record of this Government over the past four years in our enthusiasm of the resplendent record of a few brief months.

* * *

Our good friend, Mr. H. P. Bagaria, whose letter on this topic appears elsewhere in this issue, has deemed it necessary to chide us in the following words:

> "Now, Sir, a few words about yourself. For some time past, you have constituted yourself into a sort of publicity agent for the Finance Department of the Government of India. I must congratulate the Finance Member on his having been able to secure your services, because no press agent of any star in Hollywood has been able to do his job more efficiently than you. The Hollywood star has to pay a very stiff fee for the publicity that she or he gets; but though unkind critics may say otherwise, Sir George Schuster has been lucky in getting an accomplished publicist like you at the price of a few sweet words of which the Finance Member has an inexhaustible supply".

In the same letter Mr. Bagaria states that many people, following our advice, "find themselves saddled with a security the price of which to-day is at a considerable discount, for which they must be surely cursing you in their hearts." It is our extreme hard luck that while we set out to create a proper atmosphere for the new loans only because we believed *bonafide* that the resultant reduction in the borrowing rate of the Treasury would be of incalculable benefit to the country, we are now the recipient, not of the thanks of the Government, but of the curses of those who believed in the point of view taken by *Indian Finance*.

* * *

We owe it to ourselves to examine the attitude and actions of the Government in greater detail. At

least three weeks prior to the publication of the Rupee Loan prospectus, *Indian Finance* gave a true and complete account of the technical position of the giltedge market in India at that time. We showed that most operators had bought heavily ; that, as a consequence, prices had risen in a hectic fashion ; and that the maintenance of the top levels was dependent upon the digesting capacity of the market. We never concealed our apprehensions that the position in this regard was somewhat unhealthy. The Government knew this only too well. Knowing this, they should have had no difficulty whatsoever in realising that if, at a time when the market was anticipating a pro-rata allotment on the cash applications, full allotment were given, the over-bought position would reach unhealthy proportions. It is useless to argue that according to the strict terms of the prospectus, the Government were bound to close the list as soon as the approximate total of Rs. 15 crores was reached. In London, too, the list was open only for a few minutes. The limit of the last sterling loan was also fixed. Yet, the lists were kept sufficiently long to allow of such over-subscription as to necessitate a pro-rata allotment on so low a basis as 25 per cent. Those in charge of the loan operations in London knew and understood the tactics suited for the creation of the best impression in the market. What the authorities in India aimed at was histrionics. They wished to be able to lay claim to the proud record of having secured Rs. 15 crores in less than half an hour. In their absorption on the theatrical effect, they forgot the strategy of the game.

* * *

In the first place, the market was already overbought. If the Government had been wise, they should have come into the market with the New Loan only after the technical position had been rectified. Having entered the market in such a delicate situation, they should have been all the more careful that their New Loan operation was carried out in a manner that would not intensify, but remedy, the errors and misfits in the technical position. Their action from this point of view was exactly the opposite of what it should have been. Having caused further disruption by bad tactics, they should at least have been prepared to administer correctives. It is not an edifying spectacle for a new loan to sink to 3½ per cent. discount within a week of its issue. It does not speak well for the credit of the Government. While news were thus bad enough, a bombshell was thrown this mid-week by the announcement that the Indian Office had fixed up a 4 per cent. 1948-53 sterling loan at £97½. We challenge the authorities to find out one single man of note in the Indian financial world who has anything but the strongest condemnation for this step. In one week, they borrow in India on the basis of about 3¾ per cent. In the following week, they come out with another loan in London on the basis of 4½ per cent. What has happened in the space of a few days to necessitate this pushing up of the borrowing rate? Was there any special emergency, to provide for which this sterling loan was necessary? Or was there any reason to think that if the Government had waited, they would have missed a golden opportunity? A more ill-timed, ill-planned and ill-motived loan it has not been our misfortune to come across.

* * *

Sterling resources in the Home Treasury were ample. The opening balance at the beginning of this financial year was £13.4 million. Up to date, sterling purchases amount to £4.6 million. The resources with the Secretary of State are, thus, £18 million. His requirements for ordinary needs are only £21 million for the current year. There are yet ten and a half months in which the Government should be able to buy considerable quantities of sterling. It is quite conceivable that the exchange market in India would remain sufficiently strong to enable the Controller of the Currency to make remittances on a scale adequate for the entire normal requirements as well as for the extraordinary needs connected with the repayment of the maturing sterling loans. In any case, there was no shortage of any kind so far as the cash position of the India Office was concerned. Why, then, was the sterling loan issued, especially as the authorities should have realised, easily enough, that it would have a most disruptive influence on the Indian market? We may be told that this measure was taken entirely on the responsibility of the Secretary of State ; and that the Finance Member in India was not a party to it. But pushing the logic further, we may also be told that the Secretary of State had not much of a voice in this matter and that the loan was the outcome of the advice of the Bank of England authorities, whose opinions have come to be sacrosanct with the Government.

* * *

The Finance Member may try to escape responsibility by shoving it on the Secretary of State and the Secretary of State may likewise throw the responsibility on the Bank of England. But the fact is that investors, who trusted the Government in the last loan to the extent of Rs. 30 crores, have been made to lose Rs. 1½ crores as a result of an operation the ultimate responsibility for which is not a serious concern with them. The investors, who have lost all this money, have also lost faith in the ability of the Finance member to protect them against misguided operations of this kind. It was only in the last few months that, after a disastrous record of over four years, the confidence of investors in the credit policy and operations of the Government of India was revived. The events of the last fortnight have dealt a cruel deathblow to that confidence. It would not be an easy matter for the Finance Member to seduce investors in his next venture in the Indian market.

BRITISH BUDGET.

Our notes and comments on the British Budget in an earlier week were necessarily short and scrappy. With the fuller examination that is now possible on the receipt of the air mail papers it is possible to see that by the criteria, which are undoubtedly sound and valid during normal times, and which are now falling into discredit, Mr. Chamberlain's budget should be deemed a noteworthy and creditable performance. But considering that the month preceding the announcement of the budget was full of discussions as to the extent to which the Chancellor of the Exchequer should deviate from the orthodox canons of sound finance to meet the requirements of true economy, there can be little or no surprise that the achievements of Mr. Neville Chamberlain are looked askance even by the traditional guardians of orthodox finance. Under the stress of the abnormal conditions that rule today, principles of public finance are undergoing a radical change. There has been an insistent demand on the authority of the foremost British economists that there should be a deliberate unbalancing of the budget in order to help the recuperation of national economy. A less radical demand is that the state should decide in favour of a large scheme of capital expenditure financed by loans. As the guardian of the national finances, Mr. Chamberlain has cast his vote in favour of orthodox finance ; and if he can be judged by these standards, he is entitled to some measure of appreciation.

* * *

The salient features of the budget are easily summarised. The actual revenue receipts for the year now ended was £745 million as against the budget estimate of £765 million. Customs and excise had shown a gross deficit of more than £15 million. This deficit was, however, reduced to one

of 12 million by the increment of 2.5 million from the duties on the imports from the Irish Free State and 1.75 million from the additions to the general tariff made as a result of the Ottawa Agreement. Oil and tea had yielded substantial increases in revenue. But beer revenue fell £6 million short of estimate and the new tariff duties had shown a shortfall of 9 million from a budget estimate of 32 millions. Inland revenue, too, had nasty surprises for the Chancellor. Income tax was down by £8.5 million as arrears had fallen below the estimate by £7 million. The real index of the present hard times is the fall in the surtax. Not less than 12,000 persons who had formerly been subject to surtax were found to have dropped into lower levels of income. Death duties have done well, but stamps have been disappointing. On the expenditure side, though there was an increase on the original budget estimate of (447.2 million) of 21.6 million on account of the supplementary estimates, it was found only 13.5 million of the extra sum provided for unemployment had actually been spent and an additional 6 million had been saved in other supply heads. The actual expenditure, including fixed debt charges, on the payment of the war debt instalment to the United States Government, is £777 million. The actual revenue is £745 million leaving a budget deficit of £32 million. Mr. Chamerlain pointed out that under the Finance Act of 1930, the deficit would fall to be made good in 1933, but "I propose to follow the example of Lord Snowden who in the following year considered that it was unnecessary in the circumstances then existing to maintain so austere and exacting "standard of financial purity. Consequently the debt will be met by borrowing." He also drew attention to the fact that the deficit included a payment to the United States of £28.9 million. Without that the deficit would have been only £3.3 million. Moreover, there was a payment to the sinking fund of 17.25 million. "If we set off against that £2,256,000 already on account of interest on savings sertificates we find that we have a net reduction of debt of £14.6 million. On the other side of the account to the original issue of the supply service we have to add supplementary estimates amounting to 21.64 million." The great bulk of that extra charge of no less than £18 million must be laid at the door of unemployment. A sum of £4½ million was saved on unemployment, another 4½ million on the road fund and further economies extending to over a number of departments brought the total saving up to 10½ millions. That left the Government with a total net expenditure of £458¼ million. The rise in giltedge securities reduced by nearly half the statutory sinking fund of government, while the cost of interest was reduced by operations supplementary to the original conversion. By the beginning of December Government were in a position to forecast that the saving under these two heads would be 26 million which will be available for repayment of debt. But on December 15, it was found that the Government would be obliged to make provision for payment of 95 million dollars to the United States Government equivalent to 29 million sterling for which no provision has been made in the budget. As it was decided that this payment should be made out of the budget revenue, the whole of the savings were absorbed and in addition it became necessary to borrow 2.056 million on account of interest on national savings certificates. The final apportionment of the fixed debt charge apart from the American debt is: interest on management 266.50, sinking fund 17.250 making a total of 279.5 million, which added to the payment of 29 million to the United States brings the total to the statutory figure of 308.500 million.

* * *

Summarising the budget deficit, Mr. Chamberlain said, "We have a net shortage of revenue of £22 million, an increase of expenditure of 11 millions and a debt payment to the United States of £28.9 million. From that we can deduct the saving in interest on debt of £13.7 million and a redemption in sinking fund of 15.2 millions to 17¼ million making together 28.9 million. This leaving a deficit of £33 million or allowing for the estimated surplus of £800,000 a budget deficit of £32.2 million."

On the expenditure side, Mr. Chamberlain took credit for a prospective reduction of £52 million, as compared with last year's estimate, in respect of interest on national debt, but had to provide for 463 million against 447 million of supply outgoings. And in the former figure is included 22.5 million to cover unemployment supplementaries. Thus the total of ordinary expenditure for the budget year amounts to £36 million less than a year ago. By repeating the last year's procedure of leaving all receipts and payments on war debt account out of the budget and by declining to make any provision for sinking fund, he was able to reduce his requirements by 68 million in all to £697.5 millions. Thus on this basis there is a surplus of £50 million. After minor adjustments of taxes, fresh duties on road transport, reduction of 18sh. per cent. in the duty on new capital issues, imposition of 1d. per gallon duty on heavy hydrocarbon oils additional duties mainly on matches and lighters, this surplus is raised to £17 million to which should be added £10 million from the depreciation fund formerly attached to the 5 per cent. war loan and now no longer required. With £27 million at his disposal, the Chancellor of the Exchequer took a penny off the pint by a modification of the beer duties costing £14 million this year and to reinstate the system of paying income tax in equal halves in January and July. This left him with a surplus of just over £1 million.

* * *

As mentioned at the outset, there should be little or no comment to make on the budget if the Chancellor's fear of new doctrines should be accepted as sound. But there is no mistaking the force of the criticisms that have been made by such eminent economists as Mr. J. M. Keynes, Sir Josiah Stamp and Mr. J. A. Hobson that there is no peculiar virtue in a balanced budget when it can be demonstrated that it coincides with the most unbalanced state of the national economy. Perhaps, the aptest comment on Mr. Chamberlain's achievements is that of the *Economist* which points out "To achieve an arithmetical balance on paper to-day, without attempting to lay foundations which will stand the strain of to-morrow, is the part of a ledger-clerk, not of a statesman. To us the most disquieting aspect of Mr. Chamberlain's speech was the absence of any sign that the Government even now appreciates that, unless the national income expands, a balanced budget on a £700 million scale—and that, too, after realising all the possible savings from conversions and low interest rates—becomes a patent impossibility. The vital question is not whether the balance of this budget is meticulously secured, but whether the Government has a policy calculated to raise the taxpayers' resources to a level capable of sustaining next year's burden."

LOAN EXPENDITURE OR CREDIT EXPANSION?

At no time in economic history did the world stand in greater need of expert guidance than now. Equally, at no time did experts show sharper cleavages of opinion than at present. This is indeed, much to be regretted. But it is not to be supposed that, for that reason, the discussions that are now going on among the British economists are of little or no practical use to depressed world economy. For the careful student of contemporary opinion will find that the main differences regarding the causes of the depression have in large part been made up. At any rate, the differences are not such as to breed a multiplicity of cures or fundamentally different methods of hastening or

facilitating the revival. It may be pointed that the main point on which opinion has been divided is whether the depression is to be attributed to changes on the goods side or the money side of modern economy. The fact that, whatever the origin of our misfortunes, the most salient effect or rather the most arresting end of it is the chaos of currencies has forced a recognition that there had been more misfits on the money side than on the goods side. Thus few would to-day be disposed to question the wisdom or the expendiency of attempting to pave the way for a revival by the increased supply of the means of payment. On this even economists like Mr. J. A. Hobson who stand outside the arena, in which the monetary and the non-monetary theorists are engaged, can agree heartily. For if it is true, as they contend, that the depression was caused by the failure to broaden the basis of consumption, that omission can be made good only by measures which will increase employment and the purchasing power of the masses. A word may perhaps, be said of the fatalists who believe that, given, the chance the forces of free competition would still succeed in setting the economic world on its feet again. In other words, they believe "in bigger and better bankruptcies." The world has to-day little patience for them. The bones of trade and commerce will be bleached dry before they have a chance of proving their beliefs or accepting their disillusionment. Likewise, the overproductionists, if we may so call them, can have no place in a World Economic Conference on account of the obvious difficulties of carrying out an all-embracing policy of restriction. Restriction to-day may be likened to the attempt of a man who is caught in quicksands trying to save himself by merely jumping up.

* * *

There is on the most careful analysis no alternative to-day to reflation as a means of stimulating demand, bringing about a rise in prices and restoring solvency to all productive enterprise all over the world. It is therefore, regrettable, as Mr. Hawtrey observed in a lecture before the Royal Statistical Society in Air Mail week, that there should be differences of opinion among the reflationists, Mr. Hawtrey for his part, favours purchases of securities on a sufficient scale by central banks as the best chance of raising prices.

* * *

To decide between the various methods of reflation that have till now been suggested it is necessary to bear in mind why such reflation has become necessary and what is its objective, immediate and remote. It stands to reason that in explaining this we should adopt the monetary view of the causes of the depression. In this view the fall in prices was caused by deflation, in whatever way it may have itself been brought about. Once the fall in prices occurs and gathers momentum, confidence is shattered, activity is restricted, purchasing power contracts and a number of mutually aggravating forces of an adverse character are in play. Thus the two main purposes, if we insist on keeping them apart, are revival of confidence and amplification of the volume of purchasing power. Strictly speaking, the former should come in the wake of the latter unless the business community all over the world should exhibit resources of daring and courage of which it has so far remained unsuspected. The experience of the last four years would not warrant the assumption that confidence is easily revived or that funds are easily forced into the markets by reductions in the rate of interest.

* * *

In his address at the Royal Statistical Society referred to above, Mr. Hawtrey is reported to have expressed the view that credit expansion is the more potent than public expenditure as a method of raising prices. For, loan expenditure by the Government could be financed either by diversion of funds from private investment or the creation of new credit. In the former case, the volume of purchasing power would not be increased and in the latter, Mr. Hawtrey argues, we should be organising recovery by the costly and dilatory method of government borrowing in preference to a cheaper and easier policy. There is an element of *petitio principii* in the latter which would probably disappear on a perusal of the full text.

* * *

But there can be no doubt that Mr. Hawtrey has either overlooked or underestimated a very important factor, namely, the persistent reluctance of private investors to put out their funds in productive investment and thus converting them from inert deposits into active purchasing power. Mr. Hawtrey takes the somewhat facile view that the idle money in the banks does not represent long accumulated savings awaiting long-term investment but money held by dealers who are too timid to invest them in stocks. Granted that money in banks is such, it proves all the more the need for an actual rise in prices for inducing private funds to venture out on productive investment. Mr. Hawtrey argues that a low rate of interest would fail toru funds towards the purchase of stocks only when everyone was expecting a fall in prices. This he says is an impossibility, since the expected fall would at once become a fact, and a new price level being thus reached would again become profitable. This is the equilibrium economics which is becoming more and more inapplicable to modern conditions. And for our part, we must argue that the escape from the deadlock through this new price level is barred by the difficulties of international trade of which every country is becoming increasingly conscious. If we circumscribe the limits of our discussion we deem it necessary to point out that to raise prices merely by diverting funds into the purchase of commodities seems to us far too simple a remedy which is too late in the day to urge. The object of reflation rightly conceived is to enlarge the purchasing power in the hands of the masses. And if the rise is brought about by methods suggested by Mr. Hawtrey it would only end in filling the pockets of a few speculators. If the depression is due to a crisis of consumption any measure which does not directly increase the amount given out to the working classes must fail to influence prices or otherwise promote the recovery. And so long as private business will not catch a new spirit of pessimism, the role of entreprenur in a period of unprecedented depression must perforce fall to the State and the Government.

NO MORE EXPERTS!

In the position revealed by the last two Railway budgets, the Pope Committee was naturally regarded by the country not only with a unique importance but with some feelings of hope. For in his speech on the last budget Sir Joseph seemed to imply by a process of coercive logic that before the Railways again become a fruitful source of revenue to the central exchequer as before, economies of a highly technical naturc will have to be secured by experts. This idea was by no means new to us; for the Railway Retrenchment Committee had nearly thrown up its hands in despair and issued panic-stricken S. O. S. to experts to save them from a task which was wellnigh impossible for them.

* * *

The Pope Committee was the result of such a recommendation and as we pointed out at the outset circumstances combined to invest the Committee with a great deal of importance. Mr. Pope himself came from a British railway which had just a while ago an impressive achievement to its credit. And the Indian public was ready to believe that here

was perhaps the only case in which the import of an expert from abroad was truly justified.

* * *

But we must urge that ultimately the results have proved disappointing. Mr. Pope frankly asks us to pin our hopes to the accumulated effect of countless changes devised and carried out by incessant toil. We are loathe to recount here what to the Committee appear to be major lines of enquiry and to us the minutiæ of departmental administration. If the only hope of economy in the Railways lies in the unflagging vigilance of the daily administration we confess we see little reason for the import of an expert abroad. Mr. Pope for his part has justified his appointment if only by his insistence that there is no need for any further import of foreign experts and that if any experts should be required, his colleagues on the Committee should do better them any from abroad.

* * *

This finding of Mr. Pope and the lack of any immediate or practical value in the report of his Committee point to some useful inferences and conclusions. If foreign experts could do little in the matter of exploring the avenues of economy we are thrown on the mercy, so to say, of the local experts who are in charge of the daily administration. While from one point of view it is encouraging to learn India is self-sufficient in the matter of expert guidance, on the other it is disquieting that no economy campaign can be conducted except with the co-operation of those who are likely to be the victims of such a campaign. We affirm that the escape from this position can be secured only by a greater measure of self-confidence and assertiveness on the part of the laymen in whose hands lies the direction of railway policy. After this debacle of the Pope Committee we believe we shall be appreciated better if we suggest that the Assembly Committee on Railway Retrenchment should not have been so frightened by the first semblance of technicality in the questions that came up before them. Democratic government would be an impossibility if the intelligent layman is to be easily cowed by the departmental expert. If we accept the position that the local heads of departments are experts in their line we must also insist that committees of the Assembly and the ministers of the future should insist that such experts should substantiate their cases by helping the former to understand the issues involved, however technical or intricate they may be. We can well imagine the experts pleading that the issues are too technical. And in answer we can only recall here the retort which Dr. Nair, the famous South Indian Non-Brahmin leader, made to a University Professor who declined on the same ground to acquaint the Senate with the results of his research: "Sir, if the findings of a science cannot be expounded to a body like the Senate of this University, either the science is a fraud or its Professor an impostor."

INVESTOR'S INDIA YEAR-BOOK.

The best compliment we can pay the *Investor's India Year-Book 1932-33* is to say that we would be content if the *Indian Finance Year-Book* attains in its field as notable a success and wins as deserved a reputation as the *Investor's Year-Book* has done in its special section. For us, to whom the preparation and compilation of a Year-Book is an experience within our own knowledge, there can be no difficulty in appreciating the stupendous volume of work that this publication entails. The references have to be kept trim and complete; a well-trained and eager staff is needed; utmost care in the checking of the littlest addition or subtraction in figures and in the scrutiny of the tiniest comma in proof-reading is essential. Vigilance, expedition, energy, comprehensive information, and first-rate organisation—these have contributed to the universal recognition of this annual publication of Messrs. Place Siddons and Gough, as the most reliable and most complete book of reference to investors, big and small, professional and otherwise. We, in our office, use it only less frequently than the *Dictionary*. It stands supreme over all other reference books. Place, Siddons and Gough have been rendering a great service not only to the investing public, but to those who are interested in the classification and enlargement of economic statistics in India. Priced at Rs. 15, the *Investor's India Year-Book* is a priceless contribution, entitled to recognition alike from individual investors who consult it frequently, and the State in whose task of improving economic statistics, this handy volume will be found of invaluable help.

NEW FINANCIAL STARS.

Eavesdropper writes:

I regret this belated reference to the advent of two new stars in the firmament of Indian financial journalism. Mr. C. B. Mehta has converted his monthly *Cotton and Finance* into a weekly styled *The Financial News*. Mr. Mehta has intimate knowledge of cotton and bullion in their domestic and international bearings. He has also authoritative correspondents in foreign centres. He should certainly be able to make *The Financial News* a valuable journal, especially to those who are interested in cotton and bullion. He has resources and resourcefulness. He has enterprise and experience. The other entrant is the *Indian Economist* under the Chief Editorship of Dr. M. M. Roy. Dr. Roy is versatile and has the rare advantage of being equally well-versed in the theory of economics and the practice of business. Professor J. P. Neogy is the economic advisor. I have every confidence that the *Indian Economist* will present its readers with an unbiased and impartial study of, and comment on, current financial events.

TRADE BETWEEN CEYLON & INDIA

By the Hon. Mr. Peri Sundaram,
Minister for Labour, Industry and Commerce, Ceylon

The trade connections between Ceylon and India are long standing, and have always assumed much importance principally on account of the dependence of Ceylon on India for the supply of the foodstuffs required by the population. The trade in 1932 between these two countries is, however, of special interest as the year witnessed a very large increase in the exports from Ceylon to India, which consisted mainly of coconut produce.

The value of imports into Ceylon from India amounted to Rs. 80,588,000 in 1932 and, compared with 1931, represented a decline of Rs. 10,359,000. Nevertheless, the proportion of imports into Ceylon from India to imports from all countries, or, in other words, the Indian share of the Ceylon import trade, declined from 46.2 per cent. in 1931 to only 41.2 per cent. in 1932.

Imports from India classified into the main classes were as follows:

	(In thousands of Rupees) 1931	1932
	Rs.	Rs.
1. Food, drink and tobacco ...	68,485	63,993
2. Raw materials ...	11,544	8,265
3. Manufactures ...	10,878	8,330
4. Animals not for food ...	40	...
	90,947	80,588

There was a decrease in the value of Food, Drink and Tobacco imported from India, and decreases also occurred in the imports of Raw Materials and Manufactures ; but they were not peculiar to the commodities from India, there being reductions in the imports from other countries as well.

The chief articles of food, drink and tobacco imported from India were the following:

	Quantity. 1931.	1932.	Value. 1931.	1932.
			Rs.	Rs.
Gram cwt. ...	84,500	97,000	676,000	579,000
Paddy ,, ...	352,000	411,500	1,771,000	1,646,000
Pulses ,, ...	234,700	271,900	1,644,000	1,723,000
Rice ,, ...	7,972,400	7,820,800	47,119,000	44,678,000
Chillies ,, ...	146,100	154,600	2,789,000	1,983,000
Coriander seed ,, ...	2,900	22,800	31,000	300,000
Cumin ,, ...	6,700	400	167,000	7,000
Tamarind ,, ...	33,800	35,400	205,000	231,000
Turmeric ,, ...	11,800	11,900	120,000	153,000
Dried fish ,, ...	306,300	308,100	6,810,000	6,162,000
Ghee ,, ...	1,900	1,600	145,000	113,000
Onions ,, ...	491,600	502,500	1,162,000	1,647,000
Potatoes ,, ...	47,500	72,100	166,000	395,000
			62,805,000	59,617,000

Of foodstuffs, fish valued at Rs. 6,162,000, chillies at Rs. 1,983,000, onions at Rs. 1,647,000 and pulses at Rs. 1,723,000 in addition to rice, were the principal items of import. Compared with 1931, the imported quantities of all these articles, excluding rice, were slightly more in 1932, but their value was much less. The quantity of rice from India decreased from 7,973,000 cwt, in 1931 to 7,821,000 cwt, in 1932 although the imports from all sources increased from 8,733,000 cwt, to 8,839,000 cwt. The raw materials from India amounted to Rs. 8,265,000 in 1932 and represented a decrease of Rs. 3,279,000 as against the preceding year. The principal articles of import were coal, fertilisers and raw cotton, and the fall in the value of the first two largely accounted for the decrease under raw materials. Coal from India which amounted to 233,000 tons in 1932 was lower than in the preceding year by 65,000 tons, and was valued at Rs. 4,171,000 as against Rs. 5,969,000 in 1931. The decrease in the quantity imported was due to smaller supplies of coal to steamers. Imports of fertilisers declined from 899,000 cwt, to 753,600 cwt, in quantity and from Rs. 3,935,000 to Rs. 2,912,000 in value. The decline must, of course, be attributed to less manuring of tea, rubber and coconut estates. The following are the kinds of fertilisers imported from India:

	Quantity. 1931.	1932.	Value. 1931.	1932.
	cwt.	cwt.	Rs.	Rs.
Bloodmeal ...	13,900	8,300	163,000	61,000
Bonemeal ...	254,000	219,300	948,000	690,000
Fish manure ...	56,300	70,100	282,000	275,000
Fish Guano ...	2,800	1,300	22,000	7,000
Castor seed poonac ...	20,100	35,300	64,000	84,000
Groundnut ,, ...	391,300	348,800	1,437,000	1,440,000
Saltpetre ...	57,900	39,500	421,000	226,000
Ammonia ...	57,000	8,000	314,000	34,000
Others ...	45,700	23,000	284,000	95,000
	899,000	753,600	3,935,000	2,912,000

As usual, groundnut poonac and bonemeal, followed by saltpetre and fish manure, were the most important items. In these articles, India has virtually a monopoly in Ceylon. The other commodity worthy of note was raw cotton, the imports of which amounted to Rs. 595,000 in 1932, an increase of Rs. 143,000 on the preceding year. The higher value was due to larger shipments, the quantity in 1932 increasing by 1,800 cwt to 16,900 cwt.

Imports of manufactured articles from India were valued at Rs. 8,330,000 in 1931 as against Rs. 10,878,000 in 1931. Of the sum, textile imports consisting of cotton, woollen, silk manufactures, mixed materials and other textile manufactures accounted for Rs. 5,039,000, and compared with 1931 were lower by Rs. 1,614,000. Earthenware of a value of Rs. 294,000, chemicals and drugs at Rs. 298,000 and miscellaneous manufactures at Rs. 967,000 were the other principal groups of commodities.

Of the textile group, cotton yarn and twist from India were reckoned at Rs. 88,000, an increase of Rs. 22,000 over 1931, and the quantity imported was 161,000 lbs. or 28,000 lbs. more than in 1931. The imports of cotton piecegoods from all sources increased from 55,000,000 yards to 68,500,000 yards in 1932, but there was a fall in the quantity from India from 12,214,000 yards or 22.2 per cent. of the total imports under this head in 1931, to 11,168,000 yards or 16.3 per cent. in 1932 as a result of competition from Japan, imports from which source amounted to 40,366,000 yards, an increase of 16,640,000 yards in 1931. Of the imports from India, dyed piecegoods as usual formed the largest item with 10,987,000 yards which were valued at Rs. 2,595,000, and, compared with 1931, showed a decrease of 798,000 yards in quantity and Rs. 643,000 in value. Dyed piecegoods from Japan, on the other hand, increased to 10,785,000 yards or 6,022,000 yards more than in 1931 ; but their value was Rs. 1,800,000 or only Rs. 978,000 more than in 1931. The abnormal increase in the imports of Japanese dyed piecegoods

FURTHER BIG REDUCTIONS IN RATES FOR HIGH TENSION ELECTRICITY

FOR

INDUSTRIAL PURPOSES

In additions to the large reductions in rates for Electricity for consumers of over 50 H.P. announced in November 1932, a further reduction of 5% to 15% (according to load) will be available from June 1st.

For industrial purposes, Electricity is cheaper in Calcutta than in any other industrial centre in the world.

HEI

was due to low prices, as a result of the rapid depreciation of the yen, the averge declared value in 1932 of the Japanese material being 17 cents per yard as against 24 cents for those from India.

Excluding jute manufactures, imports of which from India amounted to Rs. 626,000 in 1932, the other textiles of importance were silk and artificial silk. As a result of larger importations of broadstuff, India's share in silk manufactures improved from 4.5 per cent. to 15.5 per cent. In 1932, 105,000 yards of broadstuff valued at Rs. 59,000 were imported from this source as against 5,800 yards at a value of Rs. 4,000 in the preceding year. Purchases from India of other silk manufactures also rose from Rs. 92,000 to Rs. 325,000 in 1932. In spite of Japanese competition, there was an increase in artificial silk from India, 761,000 yards being imported as against 29,000 yards in 1931, the respective values of which were Rs. 227,000 and Rs. 8,000.

Of the other manufactures from India, tiles which were valued at Rs. 221,000, miscellaneous manufactures of brass and copper at Rs. 261,000, pig lead at Rs. 367,000, and tea lead at Rs. 269,000 were the chief articles. Compared with 1931, the imports of all these articles were less both in value and volume.

While the imports from India into Ceylon in 1932 compared with 1931 did not record any changes of special importance, the exports from Ceylon into India were especially significant for the reason that they increased in value from Rs. 8,656,000 in 1931 to Rs. 15,329,000 in the following year. The share of India in the export trade of Ceylon accordingly rose from 4.1 per cent. in 1931 to 9.2 per cent. in 1932. The export to India, classified into the main classes, were as follows:

(In thousands of rupees)

	Rs. 1931	Rs. 1932
Food, drink and tobacco ...	4,677	3,759
Raw materials	3,456	11,490
Manufactures	123	80
	8,656	15,329

The very considerable increase in the exports in 1932 was due to better prices secured for coconut produce and to larger shipments as a result of a shortage of the South Indian coconut crop. The value of copra, coconut oil, and fresh coconuts increased from Rs. 2,651,000 in 1931 to Rs. 11,363,000 in 1932 but it is significant to note in 1933 that there has been so far a decline compared with the corresponding period for the previous year. The other commodities of note were betelnuts valued at Rs. 1,236,000 and tobacco of a value of Rs. 988,000.

I have received a copy of Mr. Shamdasani's speech delivered at a recent meeting of the Central Bank as well as a pamphlet giving "a bird's-eye-view," from his well-known standpoint, "of the realities of the situation." I notice that in pursuit of his self-inflicted task to bring various legal proceedings against those connected with the Central Bank, he has shown so much zeal as to print 10,000 copies of the pamphlet and broadcast them amongst all and sundry. But for this fact, the effusions of this frenzied shareholder would have been beneath my notice. As, presumably, he has taken steps to ensure publicity for his exaggerated and distorted version of the Central Bank's affairs, I deem it my duty, in the interests of a bank on whose uninterrupted prosperity depends the prosperity and growth of Indian banking, to expose the motives and manouvres of a man who has been relentlessly persecuting the Bank for over a decade. So far as Shamdasani is concerned, all this persecution of the Bank has been in the nature of a hobby to him. But so far as the Bank itself is concerned, it has had to spend large sums, year after year, and spare the senior officials for this legal work, time after time. It would be no exaggeration to say that the vexatious legal proceedings sponsored by Shamdasani should have cost the Bank at least Rs. 1 lakh per year for nearly twelve years. If Shamdasani loses the case, he loses nothing. The Bank, however, could not afford to take any chances. It has to prepare its defence in the most thorough fashion. Shamdasani is his own counsel and his own solicitor; and the simple man he is, this hobby of persecuting the Bank has cost him practically nothing. But the Bank has to employ solicitors and lawyers; and modern litigation is quite an expensive business.

* * *

Shamdasani claims grave solicitude for the interests of shareholders and protests that he has made the cause of the shareholders his own "for the safety of the Company and for the protection of the interest of the Company." This claim has merely to be judged in relation to the definite and concrete fact that the interests of the Company have been suffering to the extent of Rs. 1 lakh per year on account of the legal proceedings into which the Bank has been drawn by him.

* * *

In the present Assembly, there are certain members whose occupation would be described as no more and no less than "membership of the Assembly." Mr. Shamdasani's occupation and profession may also be described as "the launching of suits against the Central Bank and making of speeches at Central Bank meetings." I have known Shamdasani from the day he blossomed into a stalwart fighter at shareholder's meetings. If I remember aright, he was the agent of one of the sub-branches of the Tata Bank in Bombay City. He held one hundred shares of the Bank. In 1920 or 1921, the Bombay papers published the questions that were to be put to the directors of the Tata Bank at the annual meeting. These questions were intended to elicit answers as regards the number of European officials employed by the Bank, the salaries, allowances and other emoluments drawn by them and a comparison of these figures with the corresponding figures for the Indian staff. The meeting in question, it was anticipated, would be a lively and even heated one. Shamdasani, who was, on the one hand, the agent of a sub-branch of the Tata Bank and who was, on the other, a shareholder of the Bank, asked for permission to attend the meeting. The permission was refused. If my memory does not fail me, I think Shamdasani defied the order and did attend the meeting. He was pulled up over this matter. The result of this episode was that his contact with the Bank was severed. Shamdasani, no longer a servant of the Bank, became a sworn foe of the Bank. When the Central Bank bought over the Tata Bank, one of the assets or liabilities—whatever we may choose to call it—was that the Central Bank also purchased the rancour and bitterness of Shamdasani. There being no Tata Bank against whom he could carry on the warfare, he transferred his affections and activities to the Central Bank and Mr. Pochkhanawalla.

* * *

Shamdasani suggests that the Central Bank made a grievous mistake in the matter of the amalgamation of the Tata Bank. But the most serious flaw in the amalgamation was that the Central Bank came to be the new target for Shamdasani's virulent campaign.

Those who originated the agitation at the Tata Bank meetings had no animosity of any kind. They had the feeling that for a bank of the size and volume of work of the Tata Bank, there were far too many Europeans drawing emoluments far too heavy. It was also felt that as this was, at that time, the most impressive institution amongst the indigenous banks, it owed a duty to the country to do all that was possible to train Indians in the banking profession and give Indians every encouragement and inducement. There were some who thought that by the importing of too large a number of European staff, the chances and prospects of the Indian staff were being seriously jeopardised. This was the main bone of contention in the early "agitation" meetings of the Bank. Since Shamdasani's advent on the scene, however, personal charges against officials and directors, bitter and rancorous speeches, and excited and hectic proceedings have become the order of the

day. I have myself attended a good few of the meetings of the Tata Bank and the Central Bank. I can say, without hesitation or qualification, that a prepondeating majority of the shareholders are sick and fed—up with Shamdasani's tactics and his way of making annual meetings unpleasant and trying to one and all. Shamdasani has a heavy, stodgy appearance. He has a loud and lusty voice. He has enough brass for all the shareholders put together. Once he is on his feet and starts haranguing, he simply will not sit. The whole body of shareholders may shout him down. The Chairman may pull him up and lay down his points of order. But Shamdasani, unmoved and unperturbed, will continue shouting at the top of all the yellings and screamings in the meeting. I have known occasions when shareholders got so disgusted that they would have liked to throw him out of the next window. But, as the saying has it, any dog can bark at the Sun. And there is nothing to prevent Shamdasani haranguing to his heart's content.

* * *

At this point, I should say that so far as the legal and technical aspect of the rights of shareholders is concerned, Mr. Shamdasani is easily the best-informed man in India. He knows what he is talking about. He is well-read and well-informed. He is laborious and painstaking. He knows company accounts from A to Z. He knows Company Law as few lawyers know it in this country. He has indefatigable energy. He has also sufficient resources of his own, so that he need do nothing for a living ; his hobby in the direction of persecuting the Central Bank causes him no inconvenience or embarassment. If only Shamdasani had been capable of a higher outlook and a sweeter disposition, he is the kind of man who has an all-round equipment for making an ideal defender of the rights of shareholders. It is a great pity that talents of this kind should have been used for so narrow and so dangerous a purpose as to bring a great banking institution into disrepute.

* * *

The kind of dis-service, which he has rendered to the Central Bank in particular and to the movement for the vindication of the rights of shareholders in general, is in marked contrast to the policy of constructive criticism which the Bombay Shareholders Association, under the able, adroit, tactful and well-informed leadership of Mr. J. J. Kapadia has adopted from the beginning. Those in charge of the Shareholders' Association have shown a like capacity for laborious work, correct and clear understanding of the fundamentals of the legal position and also a just appreciation of the needs and requirements of the particular businesses carried on by the respective joint stock concerns. The record of their work is substantial. They have tackled the affairs of quite a large number of companies. Their criticism has been without fear or favour. But the very victims have acknowledged the justness of the criticisms and the helpful attitude of the critics. In most of the cases taken up by the Shareholders' Association, there have ensued fruitful results. Rights of Shareholders have been greatly enlarged and strengthened by their advocacy. Important concessions have been secured as a result of their intervention. The record of Shamdasani is barren. That of the Bombay Shareholders' Association is impressive. Wherever Shamdasani has thrust his unwelcome presence, there has been only quarrel and bickering. In nine cases out of ten, the Bombay Shareholders' Association has intervened in a way that has resulted in a better understanding and livelier friendliness between the management and the shareholders. The most conspicuous instance from this point of view is the way in which the Association tackled the affairs of the Imperial Bank. They made out their case effectively. They took part in the discussions with intelligence and decorum. And the result is that the Chairman at last year's annual general meeting of the Bank deemed it fit and necessary to pay a tribute to the constructive manner in which the Bombay Shareholders' Association had helped the Bank with suggestions of great value and importance.

* * *

The obvious intention and purpose of Shamdasani is to excite a frenzy of panic amongst shareholders. The final peroration of the pamphlet is in fervent terms and in capital letters and runs as under :

> "Can the above state of affairs be viewed with equanimity ?
>
> When will the shareholders face the realities of the situation ?
>
> Unless the shareholders become masters in their own house, take saving measures including removing those responsible for the above appalling results, the future is indeed gloomy.
>
> The task of taking saving measures remains before the shareholders ever threatening, ever calling for attention and each day's delay in dealing with it only adds to the evil.
>
> Awake—Arise—or be for ever fallen."

This is not the first time that Shamdasani paints the picture in lurid colours. This is not his first appeal to shareholders to awake and arise nor his first warning that, if they fail to heed to his warning, they will be for ever fallen. The shareholders were content to dismiss his warning with the contempt it deserves ; and they have not "for ever fallen." On the other hand, they see that despite most strenuous and anxious days for all banks all over the world, the Central Bank has put up a brave fight and advanced from strength to strength. Shamdasani has been doing everything to cause alarm and consternation amongst the constituents of the Bank. The constituents have shown, on the contrary, an increasing measure of confidence ; the deposits have now exceeded the Rs. 20 crore limit. The Central Bank can claim to be the premier institution amongst Indian joint stock banks as to the size of capital, the size of combined capital and reserves and total deposits.

* * *

If after all this constant harrying and harassing at meetings and in courts, and the glaring publicity connected therewith, the Central Bank authorities have not only maintained their position but improved their standing with the public, it affords impressive testimony to the ability and trustiness of those at the helm of affairs. The Bank stands vindicated ; and Shamdasani's heroics have been of little avail. There is another way of looking at the matter. If the Bank officials had been free from all this vexation, worry and ever-present harassments; if the Bank had not to incur heavy sums on legal expenditure ; and if the Bank had not had to keep a liquid position all the time so as to be always prepared for any emergency which these legal performances might precipitate, what might not the progress of the Central Bank have been?

The progress attained is a matter for gratification, especially in view of the heavy odds. But the Bank's state of affairs, avers Shamdasani, cannot be viewed with equanimity ; and what disturbs his equanimity is, thus, described by him :

ICE
THE CALCUTTA ICE ASSOCIATION, LTD.
for Pure, Hard, Clear Ice
Rates and Particulars from—
Balmer Lawrie & Co., Ltd.
103, Clive Street, Calcutta.

The Bank's holdings in government securities in 1931 was Rs. 6½ crores and in 1932 Rs. 7 crores.

Depreciation as at December 31, was Rs. 81 lakhs.

Appreciation at December 31, Rs. 1 crore.

Net profit as at December 31, Rs. 19 lakhs.

The Bank has granted loans and advances to the tune of about Rs. 1 crore for which the Bank holds no security other than the Debtor's Personal Security.

The Bank's holdings in lands, and buildings exceed over a crore of rupees.

The depreciation therein is estimated at Rs. 50 lakhs.

The Bank is engaged in obviously hazardous business of the above nature.

* * *

Is there any crime in keeping a giltedge portfolio of Rs. 7 crores, when the total resources of the Bank are over Rs. 22½ crores. The Imperial Bank's holdings of giltedge as on April 28, were Rs. 40 crores against total resources of Rs. 97⅓ crores. If the Central Bank had a heavy depreciation in giltedge in 1931, every bank in India and Britain had a no less disastrous experience. Anyway, why grumble about it when Shamdasani himself records the appreciation of Rs. 1 crore in the following year?

* * *

What is wrong with loans on personal security? Does Shamdasani mean to suggest that every loan or advance by a bank is or should be a fully secured loan. The Imperial Bank cannot, under the Statute, lend on an immoveable property; but a two-signature document like a *hundi* or joint pronote is a recognised security. In these days when everyone, who has thought of the future of banking in India, bemoans the lack of a bill market and longingly looks forward to the emergence of a substantial volume of bills, that is to say, when the two-signature, unsecured document in the shape of a *hundi* is the ideal that is kept in view, it is ludicrous that Shamdasani should make a serious point of the Central Bank having given Rs. 1 crore on personal security. This is as good a business as any the soundest bank might feel proud of having in its books. Shamdasani italicises this point as if it were a grave scandal. *I might as well italicise this sentence where I should declare that if this is all the knowledge of banking practice that Shamdasani has, he has but a poor claim to discuss bank accounts and bank affairs.*

* * *

Another charge of Shamdasani is that the Central Bank has invested over Rs. 1 crore in lands and buildings. It may readily be admitted that this investment errs on the wrong side so far as its bulk is concerned. But there are important considerations to be borne in mind in this connection. In the first place, the buildings now owned by the Central Bank are the result of its own purchases for its own needs in the pre-amalgamation period and the purchases of Tata Bank for its needs. In centres like Bombay, there has accordingly been duplication. But it is satisfactory that suitable depreciation is being provided from out of profits every year. In the second place, the buildings do yield a fairly satisfactory return. I do not know the exact figure; but I remember that in one of the earlier years, it was pointed out by the Bank that the yield from rents woked out to about 5 per cent. When government securities have come to yield less than 4 per cent., a return of 5 per cent. on buildings must not be considered unsatisfactory. At any rate, there can be no doubt that the Bank authorities are making the most of a bad bargain. In the third place, the value, from the advertising point of view, of having imposing buildings in the various centres where the Bank has branches cannot be over-estimated. If you ask any insurance company, you will know that the moment the company in question sets up a new building in any centre, the confidence inspired by this fact amongst the insuring public is so great that the business gets to be doubled as a result. The National Insurance Company has been able to push its new business records by leaps and bounds after it put up its imposing structure in Council House Street. Ditto with banks. If the Central Bank has been able to exel all its rivals in the matter of total deposits, its hands have been greatly strengthened in this regard by the fact that in most centres, its offices are located in premises owned by itself. If at all, there is any drawback in respect of investments on lands and buildings, the compensating advantage in the matter of publicity and advertisement is of compelling importance.

* * *

The next item in Shamdasani's bill of grievances is bad debts. Which is the bank in India or elsewhere that has not a skeleton of this kind in its cupboard? When properties, commodities, stocks, shares and every asset of every description have gone down in value precipitately, is it a wonder that every bank has had to make provision for bad debts? Before Shamdasani throws the stone at the Central Bank, let him make sure that he could not hurl the same stone at every other bank. In my own little experience, I have had to part with considerable sums for friends; and as I look back upon these transactions, my record is that 95 per cent. of them have been bad debts. When a bank like the Central Bank which has to invest over Rs. 10 crores per year incurs a few bad debts in extremely bad times, this is nothing more than what is inevitable and what is to be expected in abnormal conditions. To make a grave charge of so common an occurrence, shows either ignorance or malice or both. It is on charges of this description that Shamdasani seeks to prove that the Central Bank is sliding downwards to dangerous depths. It is true that he has done everything possible to push the Bank down to dangerous depths. But by sheer intrinsic vitality and the enterprise and ability of the Managing Director, the Central Bank has, by every token, soared to greater and greater heights.

* * *

For some time, I have been urged to undertake pen pictures of the men of moment in Indian finance. I have, ever, fought shy of so irksome a task for the simple reason that if I make all pictures flattering, I will be no more than a sycophant and if I give a just and faithful picture, it might give offence to many a friend. But the request that I should open out this feature has become more insistent. I am flatteringly assured that my portraits of men like Lord Inchcape and Sir Willoughby Carey were the best of its kind; and that, in my appreciation of men chronicled in this section, I had shown judgment and insight, concealing naught that should be mentioned and saying aught that is fair and true. Sir R. N. Mookerjee, of whom I recorded my impression last week, was "moved to tears" by my picture of him. One would have thought that a businessman of his acknowledged status and importance should have taken a bouquet in a complacent way as a matter of course. That his complacency broke down and the "mother" in him burst forth, bears out the aptness of the comment that Sir Rajendra is uncommonly great in the common virtues. It is this episode that has now furnished the impetus and inspiration to the feature "Our Picture Gallery", which I begin this week with a study of Mr. Ghansyam Das Birla, who has compelled my fascination during all the fifteen years of my contact with the business world.

* * *

Of the phrases of fragrance and cadence, coined and made current by Mathew Arnold, "sweetness and light" is not the least felicitous. "Light and

culture" is yet another. The attribute of the pair of physical eyes is to see light; and that of the mind's eye is culture. He who hath eyes and seeth all that is to be seen on the outward surface and in the inner essence is the one who hath light and culture. Electricity confers light; and liberal education inspires culture. The Calcutta Electric Supply Corporation has rendered notable service in diffusing not only light but sweetness; for, while its efficiency as a public utility concern is undoubted, its realisation of its function being that of service to the public is not less remarkable. This realisation has led to progressive decline in its charges for service. Each time increased efficiency and growing demand have brought costs down, the benefit has been passed on to the consumer. As a public utility, it has diffused light; as a public servant, it has radiated light in the sweetest way. I believe that of the principal cities in British India, Calcutta has the most economcal rate per unity for domestic supply of electricity. The Calcutta Electric Supply Corporation announce, in our advertising columns to-day, a further reduction in their rates for electricity to large industrial consumers. These reductons, which come into force from June 1, represent a reduction of five to fifteen per cent. on the current prices for electricity and are in addition to the very big reductions announced by them last November.

* * *

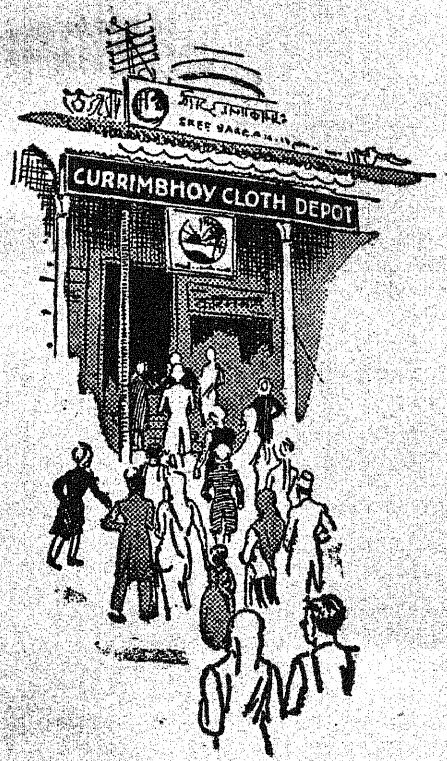
Obviously, the new motto of the Calcutta Electric Supply Corporation is: "Sweetness and light and power".

* * *

In these days when the margin of profits in industry has melted to almost nothing, saving in charges for power is a real blessing. It may well make all the difference between profit and loss. Bombay, Madras, the United Provinces and the Punjab are seeking to overcome, by hydro-electric power, the handicap of distance from coalfields. Bengal and Behar should make the most of its wealth in coal. In relation to industry, power of coal should be available to factories in Bengal as cheap as power from hydro-electric sources in other provinces. When this materialises, many of the mills roundabout Calcutta would dismantle their power-generating plants and buy current in bulk from a central organisation. I know of two or three new entrants to the industrial field, ho have avoided the outlay on power plants and fixed up, straightaway, arrangements with the Calcutta Electric Supply Corporation. The cheapening of rates by the Corporation would make this a general vogue. The industrial units make a good saving in respect of capital locked up in block; and the power supply corporation benefits by a reduction in overheads in proportion to widening production—a reduction which it were wise to let the consumers participate in.

* * *

Three cheers to all those engaged in this mission of "sweetness and light and power."



WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

C. I.

GHANSYAM DAS BIRLA

VERSATILE CAPACITY AND MANY-SIDED ACTIVITY

Amongst politicians, Mahatma Gandhi intrigues you by the apparent incompatibility of shrewdness and simplicity. Amongst businessmen, Mr. G. D. Birla is no less arresting for this blend of opposites.

In the one as in the other, shrewdness is apparent and sincerity is real. It is the most convincing proof that the highest shrewdness arises from the most direct, the most complete, and the most earnest simplicity. To an unfriendly critic, however, this simplicity might well appear a pose suggested by the most deliberate and the most consummate shrewdness.

I, for one, am convinced that the judgment of such a shrewd critic is wrong. The simple man judging the great, but simple, leaders in a simple way is, assuredly, in the right.

If a politician proves, in and by his life, that truth is the highest diplomacy ; and if a businessman, in and by his career, illustrates that "honesty pays", that is to say, that honesty is of value from the smaller and profit-earning standards as from the nobler and bigger conception of life, such a politician and such a businessman render, by their example, a notable service to humanity. In a world where one cannot help becoming cynical, they supply the needed antidote and inspire faith in the "divine" component of human nature.

I shall, at once, confess frankly that while, from this point of view, I have never had any doubt as to the Mahatma, Ghansyam Das has often made me wonder and suspect if I am but too gullible in the understanding of his nature and personality.

In the immediate presence of Mr. Birla, be it in the intimacy of a personal contact or the formality of a public function, his way of stating his views and listening to those of others has, ever, struck me as hundred per cent. genuine and honest.

Mr. Birla and I have, curiously enough, belonged to opposing camps. But when engaged in discussion, I have always been convinced that he is a man of clear, sincere and honest convictions. Whatever he says or does, there is modesty, grace and effectiveness. All the time, he shows, in all possible ways, that he is no less anxious to understand the "other" point of view ; and that, convinced as he is in his own standpoint, he never doubts the *bonafides* of his opponents.

He respects the opponent whose respect he, thereby, wins.

Whatever my differences with Mr. Birla, he exercises so great a fascination and compelling influence over me that, while in his company, I can hardly have the heart or courage to make much of the difference.

In your dealings with him, he teaches you that phrases like "honest differences of opinion", "agree to disagree", "mutual respect enhanced by mutual differences", have real significance. The more you differ from him, the more you respect him. Likewise, the more you differ from him, the more keen are you to do aught to bridge the gulf.

Quarrel with one such as he is edifying : it is, indeed, wrong to call it a "quarrel". It is a confronting of two strong, forceful and honest personalities. The outcome of such a clash results in both being victors. If he persuades you to his point of view, it is a triumph for your fair-mindedness. If he admits his agreement with your point of view, it is a victory of his ever-assertive sweetness and sincerity.

I must own that his sincerity has not, always, been so self-evident. Ghansyam Das as a lad just escaped being interned. In the hey-day of his career, he sponsored the *New Empire* and the *Bengalee* with a policy which, even in relation to Anglo-Indian papers, could be said to have out—Heroded Herod.

When roundabout the Delhi negotiations of 1931 and the Second Round Table Conference the Mahatma was winning all along the line, Ghansyam Das was a camp-follower of Gandhiji ; and he advised, as President of the Federation of the Indian Chambers of Commerce, his fellow-businessmen to strengthen the hands of the Congress and the cause for which the Mahatma stood. When, however, Gandhiji was behind the prison-bars at Yervada, Mr. Birla beared his stocks advising the same Federation to revise its earlier resolution and chalk out its own lines independent of the Congress. When the Mahatma came again into the limelight by the announcement, a year ago, of a fast on behalf of Harijans, the first person to knock at the door of Yervada was Mr. Birla.

Mr. Birla has been the most acute critic of Government finances ; he has always insisted on the authorities heeding to the demands of the taxpayers of whose moneys the Government are but the trustees. In the finance of his own companies, Mr. Birla has not vouchsafed that ounce of example which is far more impressive than a ton of precept. The kind of Articles of Association, which he has created for his recent sugar companies, do not, by any means, show that he understands his position aright as the trustee of the shareholders.

I have myself been struck by incongruities like these. What may all these mean? How may they be reconciled with my earlier portraiture?

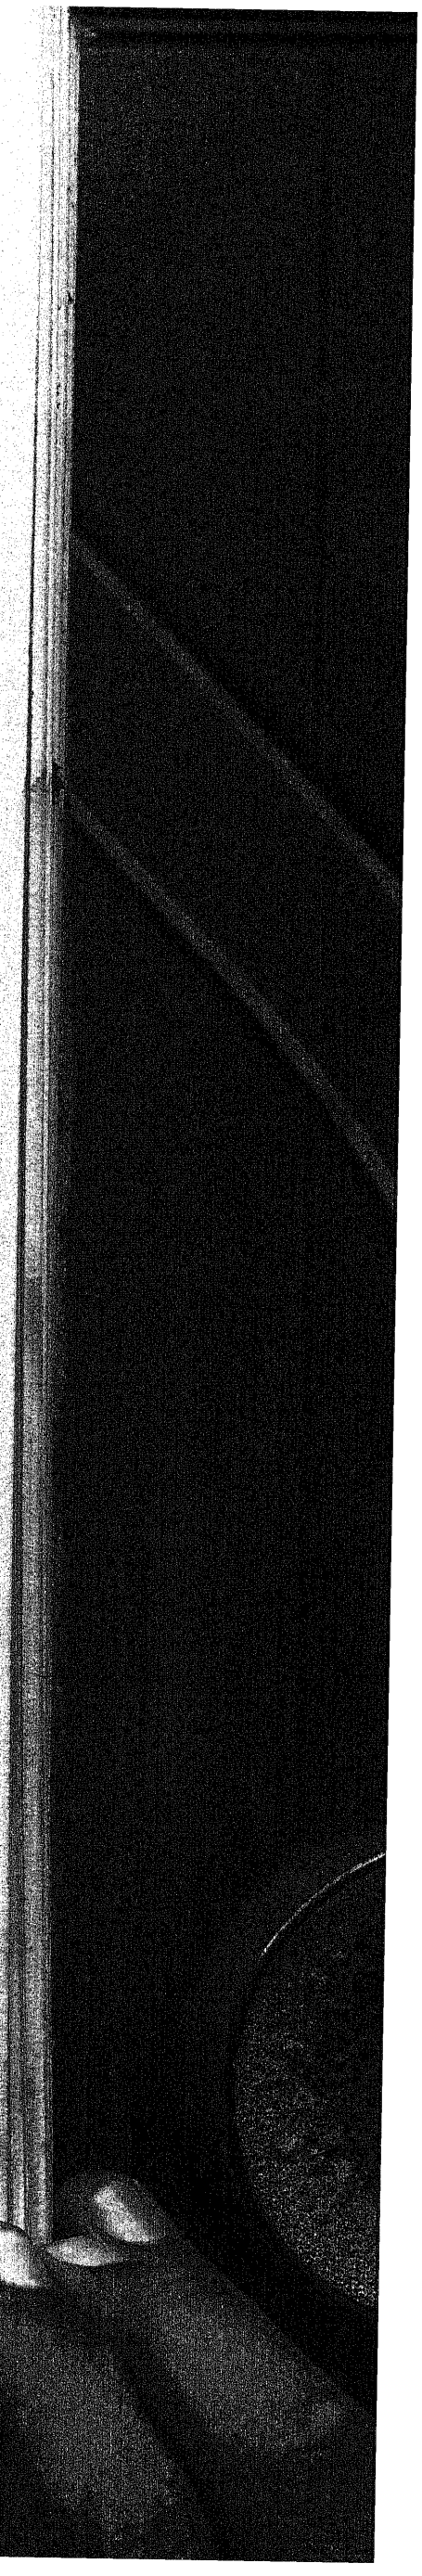
When a man seeks to play a multiplicity of *roles* in public life, he has to forsake consistency. Consistency is either the hobgoblin of little minds or the assured achievement of a grand man with an essentially simple aim and purpose in life.

Multiplicity of aims and purposes as in Mr. Birla must result in apparent incongruities. Only the little minds need make much of them.

To the bigger understanding of a bigger mind, Mr. Birla's greatness as a man is his own ; and whatever tends to mar his greatness as a public man is but the incidental and inevitable concomitant of a versatile personality devoted to varied aims.

To live the Spartan life of utter purity and austerity like unto the Mahatma's without forsaking the grab for an increasing endowment of worldly goods and power ; to be a sincere servant of the Harijan and also a stalwart supporter of capitalism ; to be a nationalist mindful only of the interests of the country and a businessman keen on securing any and every advantage for the business section of the community—this accounts for the seeming gap that separates Ghansyam Das, the simple, sincere, earnest, modest human from Mr. G. D. Birla, the adroit, speculative, ambitious and versatile businessman.

But both are one as time will show. Of that, I am sure. Else, I would not have begun by juxtaposing him alongside the Mahatma.



AN INDIAN FRIEND'S TILT AT "INDIAN FINANCE"

BLAME FOR WRONG LEAD

THE EDITOR, *Indian Finance.*

DEAR SIR,

The action of the Government of India in issuing a sterling loan at 4 per cent. within ten days of the last rupee loan is anything but honourable. I find it difficult to believe that the Government of India at the time of the issue of the rupee loan, had no intention of borrowing in London at a higher rate of interest, or that, if the Secretary of State was responsible for it, they had no knowledge of the terms of the impending sterling loan. I can understand a a speculator in a *phatka* market misleading it about his own holdings ; but what the Government of India have done has not even the justification that they wanted to serve their interest irrespective of what happened to the investors. For, increasing the borrowing rate so shortly after a loan will not only cause considerable loss to the investors but will shake confidence ; and once confidence is shaken, the Government will find it increasingly difficult to borrow at cheap rates.

I do not mean to say that once the Government borrows at a certain rate they should stick to it and never come into the market at a higher rate of interest. If conditions change, no one can blame them for offering a better yield than the last loan. But so far as I know, there has been no change in the money market conditions nor has any urgency arisen to compel the Government to increase their rate of borrowing. If the Government of India can prove that such was the case, I would willingly change my opinion.

What, then, can be the explanation for this amazing action of the Government? Either the Government or the India Office had some information which we have not at present, or the Secretary of State has forced the Government of India to borrow on these terms for certain reasons. The Secretary of State has been either misled by his financial advisers or he has deliberately tried to oblige certain parties in England at the expense of the taxpayer in India. It is difficult to believe that so shrewd a man as Sir Samuel Hoare can be misled so easily about the money market conditions.

For the last few days, we have been told that owing to impaired confidence in other currencies, large funds are flowing to London and that it is difficult to find employment for all that money. Besides, the general rate of interest in London has always been lower than in India. We have also been told that owing to the balancing of the budget by the Indian Finance Member, and the waning of the political agitation, the credit of India in the London financial market had never stood higher. What, then, has happened on the eve of the sterling Loan to give a rude shock to the confidence of the British investor in the credit of this country? On the contrary, suspension of Civil Disobedience by the Congress should, certainly have created a feeling of greater confidence.

I desire to impress upon the Finance Member that no sane businessman would ever oblige his friends in the manner in which the Government have done. Whilst those, who have been lucky enough to get this attractive investment, may be able to make some money by selling it at a premium, the additional burden that the Indian taxpayer will have to bear owing to the shaking of the confidence that the investors had in the credit of the Government of India will be very great.

In the above connection, I may be permitted to ask the Finance Member and the Secretary of State for India, whether if the portfolio of finance had been held by a popular Minister, he could ever have dared to do what Sir George Schuster has done in the present case. And India may well ask: Is this the way in which the financial safeguards, regarding the incorporation of which in the new constitution, His Majesty's Government are so anxious, are to be worked in the interests of India? Are the Indian commercial community to be blamed if they view with grave suspicion and serious misgivings, the safeguards that are now proposed. There can be no better argument for Financial Swaraj for India than the callous manner in which the interests of the Indian investors have been betrayed in the case of the present loan.

Now, Sir, a few words about yourself. For sometime past, you have constituted yourself a sort of publicity agent for the Finance Department of the Government of India. I must congratulate the Finance Member on his having been able to secure your services, because no press agent of any star in Hollywood has been able to do his job more efficiently. The Hollywood star has to pay a very stiff fee for the publicity that she or he gets ; but though unkind critics may say otherwise, Sir George Schuster has been lucky in getting an accomplished publicist like you at the price of a few sweet words of which the Finance Member has an inexhaustible supply.

You have drawn glowing pictures of the fundamental soundness of the position of the Government of India not only in your regular issues but in "mid-week Supplements" and in "The Eve of the New Loan Supplement" to tell the investor that if he did not lend his money to the Government at the rate they asked, he would have to repent for it. You have, in your enthusiasm and faith in the Government's credit created an impression that there will be no departure from a scientific credit policy ; and that they will continue to steer a course of borrowing at cheaper and cheaper rates. The result has been that many people following your advice find themselves saddled with a security, the price of which to-day is at a considerable discount. They must all be surely cursing you in their hearts. I wish you had been more temperate in your advocacy for the Government loans. In the interest of *Indian Finance,* a cause which is dear to us all, I hope you will be, in future, more sure of your grounds than has been the case in the last rupee loan.

A tip for you: Put not your faith in assurances of Finance Members.

Yours etc.

H. P. BAGARIA.

OLYMPIA

(From Our Correspondent).

Simla, May 9.

Once again Gandhi holds the chief interest of the week. As forecast in your columns, he has now been released. But his statement has caused some heartburning here.

* * *

Government circles declare that, when they did not ask Gandhi to give any undertaking, they expected him to honour an implied pledge that he would not talk any more of civil disobedience, at least during the period of his fast. And to Simla's amazement the very first statement Gandhi has issued deals with civil disobedience movement!

That is, of course, the feeling of those who wish Gandhi altogether to retire from politics and devote his attention only to untouchability work.

* * *

But there is a little more in it than appears on the surface. Gandhi's statement has outwitted the Government. It has proved to the world, so some officials fear, that Gandhi was being kept in jail even though he was agreeable to suspending the movement and that, therefore, all the professions of the Government, that they were awaiting some gesture from Gandhi before releasing him hitherto, were a cover for a policy of repression.

* * *

Another shock has been the quick decision taken by Mr. Aney in suspending the civil disobedience for 6 weeks. Probably it is only a feeler. Well, if Simla and Bombay are to determine the attitude of Government it may be stated to stand for surrender by Congress, surrender, in the sense that Congress must definitely abandon civil disobedience and revert to the programme of constitutional action.

* * *

So that, if excuse is to be had, it would be constituted by the difference between 'suspension' and 'abandonment.' I do not see any signs here of a radical change in the atmosphere that has prevailed hitherto; and the Indian delegates in London are not strong enough either to assert themselves with the authorities there. But that Gandhi has put himself in the right by his statement and put the Government in the wrong, is the general opinion here among impartial observers.

* * *

Outside politics, no question has troubled Government more than that relating to the Airways. A public announcement has been made; but much remains yet to be said. It has been one prolonged struggle between the national interests of India and the Imperial interests of England.

* * *

It was Sir B. N. Mitra who first dealt with this question as the Industries Member and committed the Government of India to certain principles, such as rupee capital and majority of Indian Directorate.

* * *

It fell to Sir Joseph Bhore to fight and win many an important point in the application of those principles. For instance, the Imperial Airways were defeated in their attempt to use India as an Imperial route just as Dutch and French planes are doing at present. They were made to accept the position that the Indian route must not be considered merely Imperial and that whichever company runs it must be registered in India with rupee capital and a majority of Indian Directors.

But when it came to the question of allotment of shares the Imperial Airways won. 51 per cent. of the shares were allotted to them, 24 to the Government of India and 25 per cent. to the National Airways. Now, as regards the National Airways its capital and its organization have been left to Mr. R. E. Grant Govan to arrange. All the offers, some very substantial, of Indian businessman were ignored. The European businessman was preferred for the purpose and he gave the assurance that he would gather round him Indian capital.

* * *

So, in the matter of principles, Secretary of State was made to yield while in the matter of financial details the Imperial and European business principles were allowed to prevail.

* * *

There is one relieving feature in the situation. The contract will expire in 1939. The Federal Government of that day can take an independent decision. But here again it cuts both ways. The Calcutta-Singapore route may not belong to India, if Burma is separated, as it seems likely to. Then the Imperial Airways may claim that while sharing that Imperial Link with a Company registered in India, it should be given the major share of the business.

* * *

As regards Indian Directors, the Government of India is likely to nominate Rai Bahadur Ramsaran Das on its behalf; the other Directors may be persons like Mr. Grant Govan and Lala Shri Ram of Delhi, Sir Phiroze Sethna and Mr. H. M. Mehta of Bombay but the list will be confined to seven.

* * *

But although there will be a majority of Indian Directors, it is calculated that for the next 6 years no Indian would be allowed to pilot the *Atlanta* machines which are to run between Karachi and Singapore.

BANK OF BARODA,
LIMITED.

Under the patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar of Baroda.

(Registered under the Baroda Companies' Act III of 1897).

CAPITAL SUBSCRIBED	...	Rs. 60,00,000
CAPITAL CALLED-UP	...	Rs. 30,00,000
RESERVE FUND NOW IS	...	Rs. 20,75,000

Head Office:—Mandvi, BARODA.

Branches:—Ahmedabad, Bombay, Surat, Navsari, Karjan, Dabhoi, Mehsana, Patan, Petlad, Port Okha, Kalol, Kadi Sidhpur, Bhavnagar, Amreli and Dwarka.

London Agents:—The Eastern Bank, Ltd.

Current Accounts:—Fixed, Short Savings Bank and Savings Bank Deposits received on terms which may be ascertained on application.

Loans, Overdrafts and Cash Credits.

The Bank grants accommodation on terms to be arranged against approved securities.

General Manager.

THE READING ROOM

Essays in Biography: By J. M. Keynes: Messrs. MacMillan & Co., Ltd. Pages 318: Price

Alone amongst modern English economists, Mr. Keynes can claim laurels in spheres other than his own. A writer in the *Financial News* opens his review of the above book with the poser whether Mr. Keynes is an economist contaminated by contact with journalism or a journalist whose youth was misspent in shaping the economist. Appreciative readers of Mr. Keynes will find little difficulty in answering the questions. Mr. Keynes is an economist whose expertness can also meet the democratic requirements of modern journalism and whose capacities of penetrating study and elegant expression extend to the fields of national and international politics. Like everyone who has lived a full life, Mr. Keynes may well take stock of the impressions he had formed and conveyed to others on the appropriate occasions. His *Essays in Persuasion* was one long lament for a purblind humanity that rushed to its doom, heedless of all wise warning. The *Essays in Biography* is, no doubt, less purposeful in intention, but not less useful or stimulating in effect. It is just a collection of a few sketches of politicians and biographies of economists, most of which had been published earlier and read with reactions not easily imagined now. But the politicians are just those who have brought the world to the present pass and the economists are the makers of the mould which the science has not yet burst. It would be too far-fetched to attribute any scheme to the selection of the Essays; but the reader cannot miss the nearness of interest in the heroes of these biographies.

The authors of the iniquitous Treaty of Versailles are rightly in the foreground. "The Council of Four", with which the volume opens, is an extract from Keynes' classic, *The Economic Consequences of the Peace.* In the art of political portraiture, Mr. Keynes always displays a rare genius and a new talent. There is a peculiar flavour in his sketches which does not evaporate with a second reading. He does not depend like A. G. G. on a mere technique of style and presentation. Though doubtless, the idol of an earlier generation, A. G. G. is to me often flat and uninspiring. The attraction of his sketches lay chiefly, almost solely, on the choice of a piquant anecdote and deft turns of words and phrases. Mr. Harold Laski possesses in abundant measure what I have always missed in A. G. G., the appraisement of individuals in terms of ideas. But Mr. Laski pushes the subject of his sketch a little into the back-ground. He is too engrossed in the promise and prospect of the perfect socialist world of the future to care for the tallest of men, as men.

Mr. Keynes' sketches are free of such foibles. There is the most thorough-going analysis of the men as men, their mental make-up, their convictions and their prejudices, their political tactics and their personal life. He is at his best when he explains the impact of a personality on the politics of the day or the problem of the hour. To him, the Treaty of Versailles, the greatest misfortune of mankind during this century, stands revealed as the inevitable resultant of a triangular impact. "The collapse of the President has been one of the decisive moral events of history." He left Washington in the enjoyment of a prestige and a moral influence throughout the world unequalled in history. Europe looked to him to bring healing to the wounds of the ancient parent of his civilisation and lay for her the foundations of the future. The impression that Europe had of the President was that of a man of powerful and lofty imaginations, lacking in care for detail, but possessed of certain clear ideas which, with his tenacity and strong will, would help him to sweep through the cobwebs. He was solitary and aloof, suffered perhaps, the academician's lack of contact with life. But he held with increasing authority the first position in a country where the arts of the politician are not neglected. But in the Council of Four he had to deal with Mr. Lloyd George with his "unerring, almost medium-like, sensibility to everyone immediately around him," with his six or seven senses not available to ordinary men, judging character, motive, and sub-conscious impulse, perceiving what each was thinking and even what each was going to say next, and compounding with telepathic instinct the argument or appeal best suited to the vanity, weakness, or self-interest of his immediate auditor ;" with M. Clemenceau, the much too cynical, the much too experienced, the much too astute watchdog of France, to which he felt as Pericles felt of Athens and whose interests he was determined to further with Bismarckian theories of politics in which sentimentality has no place whatsoever. All this is old story ; and the newest is the best ; the little note on Lloyd George which Mr. Keynes wrote in the heat of the moment, but refrained from publishing. To this we owe the knowledge of the part which the British Premier played, and a brilliant summing up at the end. "These were the personalities of Paris—I forbear to mention other nations or lesser men ; Clemenceau, aesthetically the noblest ; the President, morally the most admirable ; Lloyd George, intellectually the subtlest. Out of their disparities and weaknesses the Treaty was born, child of the least worthy attributes of each of its parents, without nobility, without morality, without intellect."

The other politicians who have been sketched by Mr. Keynes are likewise arresting personalities taxing the author's powers of understanding men and giving scope for an attractively profound presentation. Insight and sympathy are equally manifest in the judgment of Mr. Lloyd George as a syren, but for whom "we need not fear the whirlpools", possessed of good qualities, charms and fascinations, without which he would not be dangerous ; and of Mr. Bonar Law, the Presbyterian from Canada, with no imaginative reverence for the traditions and symbols of the past and with at the same time a distrust of any emotional enthusiasm which grasps at an intangible object and an extreme respect for all kinds of success, exercising a fascination over the public as a Prime Minister not enjoying his lot unduly, of Lord Oxford the noble Roman who disdained to protect himself to a degree which was scarcely compatible with the actual conditions of contemporary life, and who was content in private life to appear the dullest amidst so much light ; and of Edwin Montague, the only male person of big mind so addicted to gossip.

We may overlook the review of Mr. Winston Churchill's book as an essay whose interest is severely limited in time and space. But "Trotsky on England" makes a few pages of extremely interesting and illuminating reading. Though Mr. Keynes dismisses Trotsky's central point with the apposite reflection that force at the present stage of human affairs is empty-headed and useless and that "the next move is with the head, and fists must wait," he must still feel in his heart of hearts that Trotsky displayed rare vision when he condemned the Webbs, Snowden, Macdonald and other Fabians, "the finished expression of the cheaply optimistic Victorian epoch," as "these bombastic authorities, arrogant and ranting poltroons . . . . . these self-satisfied pedants, these gabbling ecclectics, these sentimental carecrists, these upstart liveried lackeys of the bourgeoisie," who systematically poison the Labour movement, befog the consciousness of the proletariat and paralyse its will.

Curiously enough, "Trotsky on England" leads

to the biographies of the English Economists. Malthus and Marshall take by far the greater part of the book and the latter far more than the former. The biographies are primarily devoted to the personal life; but the student of economics will find much that is of value to his understanding of the growth of the science and the respective contributions of each of the economists thereto. Most of us know no more of Malthus than that he was the author of a trite statement about the dissimilar growth of population and foodstuffs. And even those who have pored over the "Essay on Population" may not know what these letters lay bare, the bonds of affection and regard between Malthus and Ricardo which their differences of opinion only served to strengthen all the more. The former always perceived what was true; but to the latter, though he appreciated the source of their differences of opinion, could not see the force of the former's contentions. While Ricardo was investigating the theory of the distribution of the product in conditions of equilitrium Malthus was concerned with what determines the volume of output day by day in the world. The latter held that "to omit the consideration of causes which for eight or ten years will give a great *stimulus* to production or consumption or a great *check* to them is to omit the causes of the wealth and poverty of nations—the grand object of all enquiries in Political Economy." "I am quite of opinion," he concluded, "that *practically* the actual check to produce and population arises more from want of stimulus than want of power to produce." Malthus' link with the present phase of world economy comes out best in the following:

> "We see in almost every part of the world vast powers of production which are not put into action, and I explain this phenomenon by saying that from the want of a proper distribution of the actual produce adequate motives are not furnished to continued production."
>
> "I do not at all wish to deny that some persons or others are entitled to consume all that is produced but the grand question is whether it is distributed in such a manner between the different parties concerned as to occasion the most effective demand for future produce. If it be true that an attempt to accumulate very rapidly will occasion such a division between labour and profits as almost to destroy both the motive and the power of future accumulation and consequently, the power of maintaining and employing an increasing population, must it not be acknowledged that such an attempt to accumulate, or that saving too much, may be really prejudicial to a country?"

Now that we see after three years of unprecedented depression the force of Malthus' remarks, we can appreciate Mr. Keynes' reflection perhaps even better than he himself when he first wrote them:

> "One cannot rise from a perusal of this correspondence without a feeling that the almost total obliteration of Malthus' line of approach and the complete domination of Ricardo's for a period of a hundred years has been a disaster to the progress of economics".

The more I read of Malthus and Marshall, the more I feel that their enquiries were more closely related to popular well-being than the laborious minutiæ of modern economists. To Marshall belongs the credit of laying the foundations of the science in its present form, or rather mapping the numerous byways which his successors have explored with unsparing energy often without his recognition of the unity of these bodies of knowledge and the main purpose which they should subserve. Mr. Keynes rightly devotes a number of pages to the distinctive contributions of Marshall to modern economics which, unfortunately, for reasons, which carried more weight with their author than they would with others, did not always get him the credit for their first discovery. But to my mind the greatest stroke of Marshalls' genius lies in his attempt to define economics as the science of social perfectibility. It was this thought, this lure perhaps, of a perfect world, that took him from one science to another and left him even in his last days still discontented with the study to which he had devoted his life and for which he will be remembered by posterity.

Mr. Kenyes has done ample justice, and no more than justice, to his great master. Edgeworth and F. P. Ramsey have necessarily short sketches devoted to them; but Keynes' admiration of the latter, who died at 26, with all his promise unfilled, is truly ennobling.

The Essays are true and glorious achievements and there is gripping interest in every page of the volume.

UNITED STATES OF AMERICA.

INFLATION AND WORLD ECONOMIC CONFERENCE.

The week has seen the prolongation of the fight over inflation and the continuance of the talks at Washington between Mr. Roosevelt and the representatives of foreign powers. Both were subject to inevitable vicissitudes; both gave rise to rumours and contradictions which had their natural effects on the markets concerned and though towards the close there was no authoritative decision, the mists have cleared up in large part and the men who would see ahead can persuade themselves, if they are so minded, that they are nearing, if not in sight of, land. From the beginning, Mr. MacDonald had eased the situation markedly by proclaiming a charitable—and in the light of events a somewhat too charitable—interpretation of the American developments which had taken place while he was on the seas. The American public might, indeed, feel glad that the British Premier does not take their abandonment of gold standard in the light of a low tactical move. But they cannot mistake the impression that Mr. MacDonald has created at home, nor even the loud comments of an adverse nature which the British press has made on it. They realise that the measures, which the administration would take following the abandonment of gold, should in any case lay bear the motives underlying that action. If, for instance, measures of a markedly inflationary character are scrupulously avoided, then it should be apparent to foreign countries that the abandonment of gold standard was with a view, not so much to afford relief to the debtor class at home, as to strengthen the position of America in the discussions that are now going on. For, it is difficult to see how any real relief worth the name could be afforded to the debtors if a substantial rise in prices is not wrought by inflation of currency. In the same way, if the American Government take specific steps for the distortion of the exchanges to their own liking, that, too, would leave the foreigner in no doubt as to the intentions of the American Government in this regard.

The Fight over Inflation.

During the earlier part of the week under review the anti-inflationary forces seemed to have asserted themselves over their opponents. On Saturday, April 23, the Wagner-Lewis Bill authorising the issue of 5 million dollars to States for direct relief of unemployed was passed. The Senate also passed the bill to promote the issue of 2,000 million dollars 4½ per cent. Government Bonds to refinance farm mortgages. Outside the legislature, Prof. Irwin Fisher is making a vigorous demand for inflation declaring "Our national existence is at stake. We must have sufficient inflation and then stop." Nevertheless the anti-inflationary propaganda continues. The Guarantee Trust Company in its monthly *Survey* denounces the attempts at inflation urging that they are unlikely to work and that, if successful, they may lead to dire results as in Germany. In arguing this question, the *Survey* stresses the difference between the conditions in Great Britain when she abandoned the gold standard and the conditions in America. Inside the Congress, there is the opposition which might eventually succeed in forcing Senator Thomas to accept the amendment to the bill to reduce the gold content of the dollar. The amendment would only permit such reduction if an international agreement for lower parities has been reached. Senator Borah has questioned the legality under the constitution of a bill authorising the President to varying the gold content of the dollar. Senator Robinson, the democratic floor leader, has urged that the Government must move consciously, "We must not enter the race to cheapen money."

The Inflation Bill Passed.

But ultimately the bitter fight in Congress promises to end in favour of the Administration. The Republicans attempted to strengthen their hands by offering an amendment to the bill which authorises the President to devalue the dollar make a large bond issue and accept silver in part payment of war debts. Their amendment would have empowered the Government to purchase 3,000 million dollars of silver at a price of 260 cents per ounce. This has not caused a split in the inflationists' bloc between the silver advocates and the others. On Thursday, April 27, the Senate passed the section of the inflation bill which authorises the President to reduce the gold content of the dollar. But it has caused a serious open split between President Roosevelt and Senator Carter Glass. The Grand Old Man of the Democratic Party bitterly opposed the clause in the amendment which authorises the President to reduce the gold content of the dollar and stigmatised it as "an act of national repudiation and dishonour." The complete bill was passed on Friday.

Agricultural Unrest.

The real pressure in the inflationist cause comes from the farmers. In Jowa serious unrest is reported amongst this class; and considering the possibilities in the future, the President must soon be forced to take far more active steps towards inflation than mere devaluation. The burden of debt on the farmers is becoming rapidly intolerable; and there is fierce resentment amongst the farmers at the numerous foreclosures of mortgages which are now unhappily too frequent. It is reported that magistrates who ordered such foreclosures have been attacked by mobs in various centres.

Exchange Equalisation Fund.

One of the bitter complaints of anti-inflationists is that the Administration have been taking steps in furtherance of their policy without waiting for the verdict of the legislature. The reference is to the proposals for the establishment of an Exchange Equalisation Fund similar to the fund in Great Britain. It may be granted, despite anti-inflationist opposition, that once the dollar is to be off gold, its exchange value would have to be regulated for some time according to a given policy and that for this purpose an exchange fund is indispensable. But it is equally obvious that if two such funds are to operate at the same time, one in London and the other in New York, with objectives definitely opposed to each other, the resulting conditions would be nothing short of impossible. Opinion in America and Britain alike shows spontaneous agreement in suggesting that the two funds must work in agreement and not in opposition. But no such agreement could be possible till the Governments of the two countries have come to an understanding about the rate at which the sterling-dollar exchange might be maintained. In the middle of the week, it was rumoured that Mr. MacDonald and Mr. Roosevelt had agreed that the dollar might be allowed to depreciate by about 15 per cent. and that sterling must be stabilised at a value of 4 new dollars. There are clear indications that if the British Premier consents to such a proposal, he will not have the support of public opinion at home behind him. Towards the close of the week, there were definite contradictions available of the reports of the earlier days.

Air Mail Week.

The Joint Statement.

The questions connected with the Exchange Equalisation Fund in America point out clearly to what extent even the daily transactions of monetary authorities in each country are dependent upon an early understanding amongst the powers on the questions before the World Economic Conference. The talks now going on in Washington are fast nearing their end ; and the only gain so far made seems to be that it has been possible for the President and the British Premier to issue a joint statement :

> "Our discussions on the questions facing the World Conference were not designed to result in definite agreements, which must be left to the Conference itself. But they showed that our two Governments were looking with a like purpose and a close similarity of method at the main objectives of the Conference and were impressed by the vital necessity of assuring international agreements for their realisation in the interest of the peoples of all countries.
>
> "The practical measures which were required for their realisation were analysed and explored. The necessity for an increase in the general level of commodity prices was recognised as primary and fundamental. To this end simultaneous action needs to be taken in both the economic and the monetary field. Commercial policies have to be set to a newer orientation. There should be constructive effort to moderate the network of restrictions of all sorts by which commerce is at present hampered, such as excessive tariffs, quotas, exchange restrictions, etc. The central banks should by concerted action provide adequate expansion of credit, and every means should be used to get the credit thus created into circulation. Enterprise must be stimulated by creating conditions favourable to business recovery, and Governments can contribute by the development of appropriate programmes of capital expenditure.
>
> "The ultimate re-establishment of equilibrium in the international exchanges should also be contemplated. We must, when circumstances permit, re-establish an international monetary standard which will operate successfully without depressing prices and avoid a repetition of mistakes which have produced such disastrous results in the past. In this connection, the question of silver, which is of such importance in trade with the Orient, was discussed, and proposals were tentatively suggested for an improvement of its status.
>
> "These questions are all inter-related and cannot be settled by any individual country acting by itself. The achievement of sound and lasting world recovery depends on co-ordinating domestic remedies and supplementing them by concurrent and simultaneous action in the international field. The proposals examined will be discussed with the representatives of the other nations who have been invited to Washington with a view to securing the fullest possible measure of common understanding before the Conference meets. It is the hope of both Governments that it may be possible to convene the Conference for June."

The French Demands.

M. Herriot and the French Delegation have continued their discussions with the President since the publication of the above statement and the representatives of Germany, Italy and Japan are expected later. The French standpoint as understood now, is so unchanged that it calls for no recital here. In regard to the World Economic Conference France continues to insist that the stabilisation of sterling and dollar at a suitable parity is the beginning of all useful effort ; and in regard to disarmament French requirements of security should be adequately met. Mr. Roosevelt is said to favour the MacDonald disarmament plan supplemented with a provision with some sort of embargo against aggressors.

Finance and Business.

No change was effected during the week in the New York Federal Reserve Bank rate. But the weekly statement of the Federal Reserve Bank which was published on April 27 showed an increase in gold holdings of 31 million dollars which is the result of continued inflow of funds. The total gold reserves of the Federal Reserve System now stands, according to the latest statement, at 3,396,340,000.

The Anaconda Copper Mining Co. in its annual report says that for the first seven months of 1932 production exceeded consumption. Thereafter there was a reduction in stocks of 4,000 tons per month. The total world production for the year was 1 million tons when consumption reached 950,000 tons. The sharpest gains for months makes the steel operative rate 25 per cent. of capacity the highest for 13 months. The inflationary programme has been stimulating forward covering. A rise in the production of foreign pig iron ore has already materialised as a result of discount in the dollar value. Scrap and pig iron has been specially active. Tin plates mills are working 50 per cent. of capacity. March exports were highest for 20 months.

FRANCE.

STABILITY AND INTEGRITY OF THE FRANC.

France is evidently not nervous in her new isolation as the only big country on the gold standard. She has, of course, the company of three small nations, namely, Belgium, Switzerland and Holland, to which possibly, may be added Italy. But their resources are limited. And should France at any time be faced with a serious raid on her currency, the common bond of the gold standard will not help her to realise any considerable help from these companions. In the present state of international finance, with confidence undermined so seriously, the strongest of nations have to reckon with the contingency of a position in which the utmost resources of the State would be called for to protect the integrity of the national currency. With the nations obsessed with their own peculiar and insular

Air Mail Week.

interests, and anxious to preserve them against those of others, France might well feel nervous about the responsibility of having to bear, alone, the burden of the international gold standard. But apparently, the authorities have gone into the question fully ; and the tone of M. Deladier's pronouncement at the end of a grave Cabinet meeting betokens a confidence that augurs well for the future of international finance. "The rise and fall of currencies of other countries need not affect France," declared the French Premier in a speech at Orange, Vauclause' the Department he represents in the Chamber of Deputies. "The franc is the best guarantee to any currency and the most stable to-day." And the Government are confident that, if France were compelled to depend on her own resources, she is in a better position than any other country to do so.

The Reserve Position.

It is necessary, however, to examine objectively the capacity of France to stay on gold. According to the statement of the Bank of France as at April 21, the gold reserve amounts to 80.8 milliards francs. With the notes circulation at 83.7 milliards and deposits, public and private, at 19.7 millards, the cover for all sight liabilities is over 77.69 per cent., while the legal minimum is barely 35 per cent. The pressure towards the abandonment of gold standard, judging by the experience of other countries, is of two kinds. In the case of Great Britain, it was the withdrawal of foreign balances. America has now brought to the fore the other possible danger of a hoarding movement within the country. The disturbed state of international finance during recent years points to a third possibility, namely, a speculative bear raid on the franc. As regards the withdrawal of foreign balances, it is very important to note that according to official computation based on a thorough enquiry foreign balances in France are certainly less than 10 milliard francs and probably not very much in excess of half that amount. It is easy to see that even, if the whole amount of such foreign balances should be converted into gold, the resulting decrease in the reserves of the Bank of France would by no means necessitate an abandonment of the standard. As regards the dangers of an internal hoarding movement, it should not be forgotten that to France hoarding is by no means a new phenomenon. The French peasants have always had this propensity, and to the extent that hoarding is a normal phenomenon in France the scope that is still left for it is severely limited. As for the possibility of a bear raid, the essential conservatism of French banking may be depended upon to withhold the necessary credits for such operations. So that even on the closest scrutiny, it is evident that the danger of France following the example of Britain and the United States is not only remote but almost unreal.

State Policy.

It remains perhaps, to consider whether France would not furnish another and a more convincing instance of a deliberate devaluation of the currency. Of that, there need be little fear to-day. French imagination is not likely to be stirred by following the beaten track of other countries and that, too, on a line which she was the first to open up. French statesmanship and diplomacy are more intent on bringing about a stabilisation of international currencies than of providing new sensations in the hope of securing little dubious gains. In fact, in his speech at Orange, referred to already, M. Deladier made it clear that the sole purpose with which M. Herriot has been sent to the United States was that of persuading the United States and Great Britain to agree to return to gold on suitable parities. On his arrival at Washington, M. Herriot declared in a broadcast radio talk "I have come, accompanied by several experts, to study with President Roosevelt, in all independence and good faith, what can be done with a view to attentuating the World Economic Conference."

British Credit to French Treasury.

The close of the week saw the conclusion of the negotiations for a credit of £30 million sterling at 2½ per cent. to be extended by a group of British banks headed by Lazard Bros. to the French Treasury. Rumours of this loan had been current in the markets even on earlier days and tended to the recovery of franc against sterling. The credit is for 6 months ; but the French Treasury has the option to repay after three months. It is officially affirmed that the Exchange Equalisation Fund is not directly involved in this operation ; but it is obvious that the new credit will assist materially in the execution of the policy of the British Fund of preventing a rise in sterling against the franc. In fact, it will be seen that it agrees admirably with the plans and policies of the control. At present it prevents a rise in sterling ; and as the credit becomes repayable at the end of October, it will be giving a very timely aid to the British currency at a time of the year when it is normally weak owing to the autumnal pressure on sterling. The Bank of France does not come into the picture until the time comes for repayment, when, it is reported, it will be prepared to hand over to the French Treasury the remainder of its sterling balances acquired before Britain's abandonment of the gold standard. The Bank will, of course, be repaid in francs, but without any claim of compensation from the State in respect of loss incurred through depreciation of sterling.

It may perhaps, be wondered why the French Government chose to resort to borrowing abroad especially as the Government has still a margin of milliard francs under the recent authority granted by Parliament to borrow up to 10 milliards, whether long or medium. The reason is, to be found in the reluctance of French banks to subscribe for Treasury Bills in the situation which has been rendered delicate by America's abandonment of the gold standard and the prevalent uncertainties in regard to the future course of the dollar.

GREAT BRITAIN.

THE CROSS-RATE.

The first shock caused by the suspension of the gold standard had soon spent itself and there is little fear in the market of any further substantial depreciation of the dollar unless, inflationary developments in the United States are both marked and rapid. Business opinion is slowly gauging the full effects of the American devaluation and its significance to the future of British finance or industry. Everywhere we hear of the striking difference between the British crisis of September, 1931, and the American crisis of April 19. But there is little or no perturbation at America's attempt to secure for herself what Britain has successfully enjoyed since September, 1931. The most marked feeling is one of satisfaction that America had dealt her financial prestige another fatal blow, from which it will never recover and which must have the effect of strengthening London's position as an international financial centre. Quite early in the week, there was a report that Mr. Roosevelt and Mr. MacDonald had agreed to stabilise sterling at 4.00. The British press is practically unanimous that such a proposal would be unacceptable to this country and would be opposed tooth and nail from all quarters. On this news the dollar was weaker; but the recovery started with the denial of the rumour and with the news that a big inflation drive in the United States is less of a certainty. From Tuesday, francs were distinctly stronger and the strength is attributed to the negotiations that are now reported to be going on between the British and the French regarding the lending of the French balances of the Exchange Equalisation Fund to the French Government. It is understood that the British Government have long been only too ready to lend their holdings of French currency to the French Government if only the latter would guarnatee the exchange rate at which the moneys would be returned. The progress of these negotiations has tended to strengthen the French exchange. What time the dollar was showing a recovery on the knowledge that the cross rate was not to be stabilised at 4 dollars the British gained fresh access of strength by the proposal made by the Chancellor of the Exchequer in his budget statement to increase the Exchange Equalisation Fund from 150 million to 350 million pounds. City circles are quite confident that the increase in the resources of the "control" makes it certain that the authorities will be able to maintain the exchange value of sterling at any level they desire. For there are at present apprehensions that unless the British and the American Governments come to some understanding an exchange war would be inevitable between the Exchange Equalisation Fund in England and its new counterpart in America. At the same time it is hoped that it would be possible for both the funds to work in co-operation so that the task of both may be rendered easier. Failing such agreement, the British control will be able to assert itself as, apart from resources, the British have gained at the cost of innumerable blunders an experience which will be quite out of reach for America.

The Anglo-Danish Trade Agreement.

The Government apparently believes in the efficacy of a whole pile of trade agreements. Possibly, it is felt that even if they should fail to improve the trade it will give enough for the Government and its spokesmen to boast about for some time to come. Everyone in the know of things knows that it was just the anxiety to claim something that actuated the hurried conclusion of the Ottawa Pact. The last budget of Mr. Chamberlain is a candid confession that the import duties laid in pursuance of the general policy of protection in Empire trade had well-nigh killed the trade, in fact, even to such an extent as to upset the Government's anticipations of revenue in this regard. Of a piece with the Ottawa Pact is the new trade agreement concluded between England and Denmark. Last Monday, the agreement was signed by Sir John Simon and Mr. Runciman on behalf of Great Britain and Count Laurvig for Denmark. The text of the agreement was issued as a White Paper on Wednesday and the comments of the press thereon are justly hostile. One of the principal provisions is that which guarantees 62 per cent. of the total estimated imports into the United Kingdom of bacon and hams from foreign countries. The Government have, however, reserved the right to regulate bacon imports to secure an effective operation of a scheme or schemes for the regulation of the marketing of domestic supplies of these products. This they will have to do by way of giving effect to the agricultural marketing act.

In respect of coal, Denmark has agreed to take from the United Kingdom in the three years' currency of the agreement 80 per cent. of her total imports. This represents a distinct advance, the figure having fallen as low as 43 per cent. in 1931 and 53 per cent. in 1932. The increase amounts to 1,350,000 tons, as compared with the present Danish import of British coal.

Assurances have been given that Denmark will be charged the world market prices of coal.

The British Government reserves the right to terminate the agreement upon three months' notice if in any one year Danish imports of British coal are less than 80 per cent. of her total coal imports, with a proviso that the deficiency may be made up between the dates of the notice of termination and its taking effect.

A Committee is to be appointed in Denmark to deal with all complaints arising out of the agreement on the purchase of coal.

Iron and Steel.

The Danish Government undertakes a course of action which will result in United Kingdom obtaining a considerably increased share of Danish orders of iron and steel.

It is hoped that as a result of these measures Britain's exports of iron and steel to Denmark will be doubled.

Denmark further undertakes to purchase from Britain all the jute, salt, saltpetre and wrapping paper required for the export to Britain of bacon, hams and butter.

Tariff Concessions.

The agreement provides tariff concessions to a wide range of British goods. They are to be dealt with in three categories:—

Admission free of all duty, or

Reduction of present rate of duty, or

Duty not to be raised during the term of the agreement.

Britain undertakes not to regulate the quantity of the imports of bacon and hams, butter, eggs or cream from Denmark, except in so far as may be necessary to secure the effective operation of a scheme or schemes for the regulation of the marketing of domestic supplies of these products.

In the event of such regulation of imports being introduced in the case of all or any of these products, the Danish allocation for bacon and hams shall not be less than 62 per cent. of the total permitted imports from foreign countries. (Approximately the same as now.)

Butter Limitation.

For butter, the Danish allocation shall not be less than 2,300,000 cwt. in any year. If the total imports are allowed to exceed 8,100,000 cwt. in any

Air Mail Week.

year, Denmark will be allotted her share of the imports in excess of that amount.

This minimum figure is appreciably below last year's import of Danish butter. The existing import duty of 15s. a hundredweight is retained.

With regard to eggs the agreement allows the British Government to reduce the import of eggs below the provisional limit, which is fixed at five and a-half million "Great Hundreds." Britain can reduce below that figure, after consultation with the Danish Government, if the condition of the home market warrants it, but Britain undertakes to give Denmark 38 per cent. of the British import of eggs from all foreign sources.

In connection with cream, any reduction that may be necessary in the quantity of imports from Denmark are to be effected as gradually as possible.

The agreement reached regarding the importation of fish says that the total quantity of fresh and wet salted fish permitted shall not be less than 412,000 cwt. in any year, exclusive of any salmon, sea trout, eels, or fresh-water fish.

The existing duty of 10 per cent. remains, and the quantitative regulation is equivalent to a cut of about 10 per cent. in the present importation of fish from Denmark.

The agreement is not to apply to Greenland, but the most-favoured-nation form of treatment is to be applicable in relation to trade between that country and the United Kingdom.

CANADA.

Canada has chosen to fraternise better with the United States by the definite abandonment of the standard. The occasion chosen was the arrival of Mr. R. B. Bennet, the Canadian Prime Minister at Washington. Like the United States in the few weeks before April 19, Canada had been contending that she was not off the gold standard though she had imposed restrictions in the export of gold and her currency had depreciated in terms of gold. But now there is no room for official pretence and Canada has to be counted along with Great Britain and the United States. It is interesting that the order in council was passed two weeks earlier and that in the House of Commons the Minister of Finance declined to answer an enquiry as to the exact date when the order was to be made effective. The suspension of the redemption in gold of Dominion notes makes little practical difference. It only regularises a situation which had been in existence ever since Great Britain abandoned the gold standard.

For reasons that are not quite evident, the prospects of a trade treaty between United States and Canada are considered more certain than those of any similar projects that may be entertained at present. It is reported that informal trade negotiations between the two countries have proceeded in an encouraging manner. Mr. Bennet is understood to have pressed for free trade in fish, cattle, timber and copper. Canada, for her part, would be prepared for tariff reductions on chemicals, primary iron and steel, machinery and electrical apparatus. But in the latter case, it is believed that the Ottawa settlement leaves little scope for changes acceptable to the U.S.A.

A Victorious Announcement !

CHRYSLER

PLYMOUTH

A SIX

The new Chrysler-Plymouth adds to its long list of outstanding automotive achievements by becoming a Six. Thus does Plymouth celebrate its victory as the outstanding motor car value of the year. New Beauty, New Power, New Speed, New Flexibility, are built into the greatest combination of performance and thrift ever offered. Here is a FLOATING POWER Six in the lowest priced field which is designed, engineered, and built for those who demand the best. See the new Chrysler-Plymouth Six.

FRENCH MOTOR CAR CO., LTD.

DELHI CALCUTTA LUCKNOW

STATISTICAL INFORMATION

The trade returns of British India for the month March, 1933, published by the Director-General of Commercial Intelligence and Statistics, as compared with the preceding month, show increases in the values of imports, exports and re-exports. The value of imports of private merchandise totalled Rs. 10,88 lakhs, an increase of Rs. 1,66 lakhs, as compared with the preceding month. The exports of Indian produce and manufactures rose by Rs. 12 lakhs from Rs. 12,23 lakhs in February, 1933, to Rs. 12,35 lakhs in the month under report. Re-exports also recorded an increase of Rs. 10 lakhs and amounted to Rs. 31 lakhs. Treasure on private account, including currency notes, showed a nett export of Rs. 4,88 lakhs in March, 1933, as against Rs. 4,90 lakhs in the preceding month and Rs. 6,80 lakhs in March, 1932. Measured by the statistics of merchandise and treasure, the total visible balance of trade in March, 1933, was Rs. 6,71 lakhs in favour of India as compared with Rs. 8,15 lakhs in February, 1933, and Rs. 9,14 lakhs in March, 1932.

As compared with March, 1932, the imports of food, drink and tobacco in March, 1933, decreased by Rs. 31 lakhs to Rs. 1,18 lakhs, and those of raw materials by Rs. 15 lakhs to Rs. 1,92 lakhs, while manufactured articles increased by Rs. 42 lakhs to Rs. 7,59 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) declined from 50,000 tons valued at Rs. 66 lakhs to 32,000 tons valued at Rs. 24 lakhs. Arrivals of wheat amounted to 18,000 tons valued at Rs. 15 lakhs as against *nil* in March, 1932. Under raw materials, the imports of kerosene oil fell from 7.0 million gallons valued at Rs. 34 lakhs to 6.8 million gallons valued at Rs. 27 lakhs. Imports of fuel oil rose from 10.8 million gallons to 11.0 million gallons in quantity and from Rs. 19 lakhs to Rs. 23 lakhs in value. Imports of lubricating oils also rose from 1 million gallons valued at Rs. 12 lakhs to 2.8 million gallons valued at Rs. 19 lakhs. The imports of raw cotton, chiefly from the United States of America, Kenya colony, Egypt and Anglo-Egyptian Sudan decreased by 3,000 tons in quantity and by Rs. 28 lakhs in value. Arrivals of precious stones and pearls unset, chiefly diamonds, improved by Rs. 7 lakhs. Under manufactured articles the imports of cotton yarn and manufactures advanced by Rs. 41 lakhs.

The imports of twist and yarn recorded an improvement from 2.0 million lbs. to 2.7 million lbs. in quantity and from Rs. 21 lakhs to Rs. 23 lakhs in value. The imports of cotton piece-goods showed increases under all the sub-divisions. Imports of grey goods amounted to 31 million yards valued at Rs. 43 lakhs as compared with 15 million yards valued at Rs. 25 lakhs in March, 1932; those of white and coloured goods totalled 30 and 33 million yards valued at Rs. 62 lakhs and Rs. 70 lakhs as against 31 and 24 million yards valued at Rs. 62 lakhs and Rs. 55 lakhs, respectively, a year ago. Under iron and steel there was a decrease of Rs. 6 lakhs; of which sheets and plates and steel bars accounted for Rs. 2 lakhs each. The imports of machinery and millwork, including belting, declined by Rs. 12 lakhs. The imports of motor cars in March, 1933, numbered 816 and those of motor lorries, 'buses and vans 267. The imports of dyes obtained from coal tar fell by 1.4 million lbs. in quantity and by Rs. 13 lakhs in value. There were noticeable increases under silk yarn and manufactures (*plus* Rs. 9 lakhs) hardware (*plus* Rs. 8 lakhs) and piece-goods of cotton and artificial silk (*plus* Rs. 4 lakhs), while arms, ammunition and military stores recorded a decrease of Rs. 6 lakhs.

Variations in Exports.

Exports of food, drink and tobacco in March, 1933, compared with March, 1932, fell by Rs. 70 lakhs to Rs. 3,31 lakhs. Shipments of rice, not in the husk, declined in quantity from 357,000 tons to 277,000 tons and in value from Rs. 3,05 lakhs to Rs. 1,76 lakhs. The exports of tea rose from 5 million lbs. valued at Rs. 29 lakhs to 14 million lbs. valued at Rs. 81 lakhs. Exports of coffee also improved from 27,000 cwts. valued at Rs. 16 lakhs to 48,000 cwts, valued at Rs. 30 lakhs.

Raw materials and produce exported rose by Rs. 47 lakhs to Rs. 5,92 lakhs. Under this group, raw cotton recorded an improvement of 26,400 tons in quantity and of Rs. 1,35 lakhs in value. Of the total shipments of 56,400 tons, Japan took 31,500 tons or 56 per cent., China 6,400 tons or 11 per cent., the United Kingdom 5,900 tons, Germany 3,700 tons, Italy 3,100 tons, and Belgium 1,900 tons, the remainder being despatched mainly to France and the Netherlands. Despatches of raw jute rose from 30,000 tons to 49,000 tons in quantity and from Rs. 59 lakhs to Rs. 74 lakhs in value. Exports of lac declined by 4,000 cwts. in quantity and by Rs. 4 lakhs in value. Shipments of oilseeds receded from 89,000 tons valued at Rs. 1,60 lakhs to 60,000 tons valued at Rs. 83 lakhs, groundnuts falling from 52,000 tons valued at Rs. 1,05 lakhs to 37,000 tons valued at Rs. 54 lakhs. Exports of rapeseed also declined by 15,000 tons in quantity and by Rs. 34 lakhs in value.

Shipments of raw wool rose from 3.4 million lbs. to 3.9 million lbs. in quantity but the value declined from Rs. 21 lakhs to Rs. 13 lakhs. Manufactured goods declined by Rs. 36 lakhs to Rs. 2,24 lakhs. The number of jute bags shipped contracted from 30 millions in March, 1932, to 27 millions in March, 1933, and from Rs. 84 lakhs to Rs. 64 lakhs in value. The yardage of gunny cloth exported increased from 66.4 millions to 82.3 millions and from Rs. 71 lakhs to Rs. 81 lakhs in value. Exports of tanned hides and skins fell by 100 tons in quantity and by Rs. 13 lakhs in value. Exports of cotton manufactures fell off by Rs. 12 lakhs.

Trade with Foreign Countries.

The share of the United Kingdom in the imports rose from 39 per cent. in March, 1932, to 41 per cent. in March, 1933, and that in the exports from 20 per cent. to 26 per cent. The shares of Germany, Japan and United States in the month under report were 6, 14 and 8 per cent., respectively, under imports and 6, 16 and 7 per cent. under exports.

TRADE OF UNITED KINGDOM.

		Cash & Deposits	... 23,601
		Profit & Loss	... 39,37,210
Total	...4,66,02,727	Total	...4,66,02,727

Extracts from Directors' Report:

Your Directors beg to lay before you the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1932, showing a loss of Rs. 7,80,022-3-3 for the year.

Your Directors regret the loss, which is due to the continuance of general trade depression throughout the year.

In view of the loss the Agents have waived their minimum remuneration of Rs. 1,20,000.

Your Mill Machinery, Buildings and Stocks are insured for Rs. 4,63,54,110, and your Standing Charges are insured for Rs. 16,76,114.

JAINTY (CENTRAL) COLLIERY, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,85,000	Block (nett) ...	4,50,086
Debts ...	27,498	Stores ...	5,000
		Outstandings ...	5,277

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Crop and Sales.—Below are particulars of outturn and sales for the past three years:—

Year.	Crop.	Sale average.
1932 ...	165,634 lb.	Re. -/10/4½ per lb.
1931 ...	191,507 ,,	,, -/11/1 ,, ,,
1930 ...	165,019 ,,	,, -/14/7¾ ,, ,,

Season's Working.—The working of the Company for the period under review resulted in a loss of Rs. 1,812-6-2. Receipts Rs. 1,12,681-9-3, Expenditure Rs. 1,14,493-15-5.

Profit and Loss Account.—After adjustment and transferring the above loss, this Account shows a balance at credit of Rs. 3,136-6-11, which we propose to carry forward.

Season 1933.—Assuming the scheme for regulation of exports and restriction of crop is agreed to, the estimates for 1933 provide for a yield of 160,000 lb., Tea at a cost of Rs. 1,04,800 at As. 10-5¾ per lb.

DURRUNG TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,65,000	Block ...	4,02,046
Debts ...	1,51,510	Crop A/c. ...	7,411
		Stores ...	2,883
		Advances ...	2,585
		Cash & Invests. ...	3,558
		Profit & Loss ...	1,96,027
Total ...	6,14,510	Total ...	6,14,510

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Outturn—for the season amounted to 1,963 mds. as compared with an estimated crop of 2,500 mds. and 2,587 mds. actually made in 1931.

Climatic conditions throughout the season were unfavourable for growth, and the unusually short rainfall is responsible for the disappointing outturn.

As usual the whole of the crop was sold on the Calcutta market and the average realised for the season is 4.619 annas per lb. as compared with 5.336 annas realised in 1931.

The following are comparative statistics of outturn and sales for the past three years:—

Year.	Outturn.	Sale average.
1930 ...	196,062 lb.	8.629 annas per lb.
1931 ...	206,960 ,,	5.336 ,, ,, ,,
1932 ...	157,040 ,,	4.619 ,, ,, ,,

The Directors regret to report that owing to the heavy fall in the market value of medium tea last year, the result of the past season's working is a loss of Rs. 47,630-8-8, which with the adjustment of the 1931 Accounts brings the debit at Profit and Loss Account to Rs. 1,96,026-8-6. The overdraft at the Bank, which is guaranteed by the Secretaries, now stands at Rs. 45,308-2-8, while in addition to this amount the Secretaries have advanced the sum of Rs. 92,000.

As soon as it became apparent that a definite decline in the market was inevitable, arrangements were made to reduce expenditure to a minimum, and in view of the fact that the Secretaries had indicated to the Directors that it would be impossible for them to continue to bear the burden of finance, the Board considered it necessary to appeal to the Shareholders with a view to obtaining additional Capital to the extent of Rs. 1,00,000 consisting of 1,000 Debentures of Rs. 100 each to enable the Company to continue working.

The response to this appeal has been most disappointing and in view of the present financial stringency, the Directors have been reluctantly compelled to discontinue plucking and manufacture during the current year, merely keeping the gardens clean by cultivation at a total estimated expenditure of Rs. 35,436.

CALCUTTA ELECTRIC SUPPLY CORN. LD.

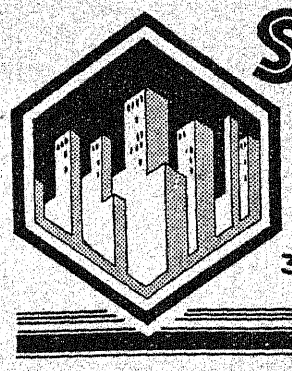
For 1932, 185,134,324 units of electrical energy were sold compared with 177,752,613 units in 1931. Net revenue after depreciation, amounted to £440,988, as against £431,770 for 1931. Adding the balance brought from 1931, £39,674, there is £480,662.

Debenture interest requires £27,500, Preference dividend £62,857, the Ordinary interim £78,950, sinking fund on debentures £12,500 and reserve for taxes £60,000.

The directors recommend that the balance of £238,855 be dealt with by allocating to reserve fund £50,000 (unchanged), to premises account £10,000 (against £12,000), to insurance fund £2,000 (same) and retiring gratuity fund £8,000 (compared with £6,000).

The final dividend is 7 per cent., making 12 per cent., less tax, and absorbing £110,530. In addition a bonus of 2d. per £1 share, less tax, is recommended, requiring £13,158. Reserve against reduction of charges receives £10,000 (nil), leaving a carry-forward of £35,166.

In the previous year the dividend was the same, but the bonus was 3d. per share.



DHELAKHAT TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	5,84,480	Block ...	8,00,000
Debentures ...	66,700	Crop A/c Outlay ...	1,43,256
Reserves ...	4,63,330	Outstandings ...	3,325
Other Debts ...	41,906	Cash & Invests ...	7,691
Profit & Loss ...	39,298		2,41,442
Total ...	11,95,714	Total ...	11,95,714

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Accounts.—The results of the year's working are as follows:—Profit as per Tea Seed Profit and Loss Account Rs. 39,822-12-10, Less Loss as per Tea Seed Profit and Loss Account Rs. 11,710-11-7, balance Rs. 28,112-1-3, to which have to be added:—Interest Rs. 7,770-10-5, Share Transfer and Sub-Division Fees Rs. 70, Amount brought forward from Season 1931 Rs. 8,013-15-11, total Rs. 15,854-10-4, grand total Rs. 43,966-11-7, after deduction of Debenture Interest amounting to Rs. 4,669, there remains a balance available for distribution Rs. 39,297-11-7, and the Directors now recommend there be placed to Reserve Account (bringing same up to Rs. 2,30,000), Rs. 5,000, and that a Dividend of 5 per cent. for the year be declared absorbing Rs. 29,244, total Rs. 34,244, leaving to be carried forward to Season 1933 a balance of Rs. 5,053-11-7.

Tea Crop.—The crop was practically all sold on the London Market, and comparative figures for the past 3 years are as follows:—

Season.	Crop.	Gross Average Price.
1930 ...	4,128 mds.	15 As. 2 p. per lb.
1931 ...	4,240 ,,	13 ,, 0 ,, ,,
1932 ...	4,027 ,,	10 ,, 8 ,, ,,

Tea Seed Crop.—A further considerable reduction in the quantity of Tea Seed disposed of has to be recorded, but this was expected in view of the continued depression in the Tea Industry.

Area.—The area of the Company's property is 1840.37 acres.

Buildings and Machinery.—These were maintained in good order, and a C. T. C. machine was installed during the year.

Labour.—The following are particulars of the labourers on Dhelakhat Estate at 31st December, 1932, excluding short-termers, compared with the same date in 1931.

	1931.	1932.
Men	231	280
Women	204	216
Children	94	74
Total ...	529	570
Sirdars sent recruiting ...	121	48

Investments.—The investments recorded in the Balance Sheet are still held by the Company, with the exception of the Rs. 20,500 5 per cent. War Loan 1929-47, which was converted to 4 per cent. 1960-70 Loan under the Government's recent conversion scheme. The market value of the investments on 27th March, 1933, was Rs. 1,86,285.

Mr. H. B. Lewis being absent from India, has not signed the Report and Accounts. J. E. Haffield, A. J. Harrison, J. B. Ram, Directors. 18th April, 1933.

CEYLON TEA PLANTATIONS CO., LD.

Accounts for the year 1932, show that including £5,357 for accumulated differences in exchange, the profit for the year was £34,848—a decline from £101,841 for 1931. The profit is the lowest since 1889, when the company owned a relatively small area under cultivation. Allocations for depreciation and for income-tax account are lower at £3,000 each (against £15,000 and £18,000 respectively), and it is proposed to pay a dividend of 5 per cent. for the year on the Ordinary shares (against 15 per cent.). The balance forward is little changed at £47,210 (against £47,740). In the balance-sheet investments stand at £103,268, whereas the market value on 31st December totalled £131,784. The total of floating assets is £318,000, against current liabilities of £164,000.

The quantity of tea passing through the factories totalled 5,880,649 lb. (against 5,746,573 lb.); the net prices realized, at 10.18d. (against 14.38d.) a lb., was the lowest since 1918. The directors believe that if the proposed tea regulation scheme becomes effective the heavy overburden of stocks will soon be reduced to reasonable proportions. Expenditure on the closed-down rubber estates, state the directors, is high at £13,690, but this includes a full share of the Ceylon head office expenditure, as also of furlough charges. The coconut crop of 7,347,375 nuts (against 8,472,760 nuts) was the lowest for three years, but the profit earned of £3,871 was particularly welcome in a year of adversity.

EDWARD SASSOON MILLS, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	17,00,000	Block (nett) ...	36,21,176
Debentures ...	12,00,000	Stock-in-Trade ...	12,98,602

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, which shows a profit of Rs. 8,370-11-10 for the year. This sum has been placed against the loss shown in the last Balance Sheet which has now been reduced to Rs. 2,38,332-8-8.

The Mill Machinery, Buildings and Stocks are insured for Rs. 68,00,800, and the standing charges are insured for Rs. 3,21,344.

LONDON AND LANCASHIRE INSURANCE CO., LD.

Net fire premiums for 1932 amounted to £2,871,692, compared with £3,040,001 in 1931. The net losses, paid and outstanding, were £1,312,159. The surplus amounted to £316,054 (against £345,319), which has been carried to profit and loss account. The fire funds now stand at £3,549,000.

Net marine premiums amounted to £1,102,380, compared with £1,296,045. The net losses, paid and outstanding, were £831,317. The surplus amounted to £159,241 (against £200,558), which has been carried to profit and loss. The marine funds now stand at £1,341,000.

In the accident and general department net premiums amounted to £2,022,855, compared with £2,196,863. The net losses, paid and outstanding, were £1,262,460. The sum of £40,916 has been transferred from profit and loss account (against a profit to that account of £77,766). The accident funds now stand at £1,609,500.

The accounts include the life account and fixed term assurance account of the "Law Union and Rock." The sum of £4,824 (against £1,502) has been transferred from the fixed term assurance account to profit and loss account.

The accounts include the life account and fixed term providing for all expenses, Dominion and foreign taxes, and reserve for unexpired risks, amounted to £439,204 (against £625,145). From this must be deducted provision for income-tax, amounting to £140,202 (against £157,916). Interest on investments, excluding that of the life and fixed term accounts, amounted in all to £531,593 (against £526,200). On the other hand, the charge for interest on the outstanding Debenture stock amounted to £22,676 (against £23,757). The directors have decided to transfer to the staff pension fund £35,000 unchanged), to contribute to the staff widow's fund £10,000 (unchanged), and to pay, on 10th May, a dividend of 10s. a share, less tax, making a total distribution for the year of 20s. per share, less tax (unchanged), or £568,642, carrying forward £1,737,859 to the next account against £1,511,176). The reserve funds of the company, excluding capital paid up, at present amount to £10,092,483, being 168.29 per cent. of the premium income.

Extracts from Directors' Report:

Report for the year ended 31st March last.

After allowing for Depreciation and Managers' Commission, the result for the year's working shows a profit of Rs. 5,45,239-5-10 which, with the amount carried forward from the previous trading period, less the interim dividend paid in December last, leaves a balance at credit of Profit and Loss Account of Rs. 2,77,080-4-9.

The Directors recommend that a final dividend of 5 per cent. be paid, making a total of 10 per cent. for the year, and the balance carried forward. A. & F. Harvey, Managers. Madura, 5th April, 1933.

KODALA, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	1,05,100	Block ..	98,754
Reserve ...	10,000	Crop A/c. ...	14,046
Debts ...	8,815	Outlay ...	8,456
Profit & Loss ...	2,189	Outstandings ...	4,551
		Cash ...	297
Total ...	1,26,104	Total ...	1,26,104

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Outturn.—For the season amounted to 2,777 mds. 71 lb. as compared with an estimate of 3,100 mds. and 3,088 mds. 9 lb. manufactured in 1931.

Weather conditions were again unfavourable for growth, the rainfall being unevenly distributed.

Of the crop 594 mds. 45 lb. were shipped for sale on the London Market and the remainder was sold in Calcutta. The average realised for the whole crop is equivalent to 4.273 annas nett per lb. as compared with 4.947 annas realised in 1931.

The usual standard of quality was well maintained but unfortunately a dull market prevailed.

The following are comparative statistics of outturn and sales for the past three years:—

Year.	Outturn.	Sale Average.
1930 ...	2,30,983 lb.	8.086 annas per lb.
1931 ...	2,47,049 ,,	4.947 ,, ,, ,,
1932 ...	2,22,231 ,,	4.273 ,, ,, ,,

The Directors regret to report that the result of the season's working is a loss of Rs. 17,191-2-9 which, with the adjustment of the 1931 Accounts and the appropriation of Rs. 45,000 from the General Reserve Fund, brings the amount at credit of Profit and Loss Account to Rs. 2,188-11-4 which they propose to carry forward.

The General Reserve Fund now stands at only Rs. 10,000, but the Directors hope to build this up again at the earliest opportunity.

Estimates—For the current season provide for a crop of 3,100 mds. at an expenditure of Rs. 79,523, excluding Commission to Manager and Interest charges.

This Company has, however, agreed to participate in the proposed Restriction Scheme, and the above estimate is therefore subject to modification in the event of restriction in crop being agreed to by the Industry.

STEWARTS & LLOYDS, LD.

Profit for 1932, were £272,022, less £152,029 for depreciation, leaving £119,992; brought in £137,118, making £257,111. After meeting preference dividends, £156,738 carried forward. To facilitate arrangements in connection with erection of new plant at Corby company absorbed during year as going concerns at book values undertakings of three subsidiaries controlling ore fields and operating iron works there. Northamptonshire ironstone properties of company and its subsidiaries have always been included in books at original cost. As consequence of decision to proceed with erection of new plant values of these properties has been, in opinion of directors, considerably enhanced. A new valuation has therefore been given effect to in company's books and amount of appreciation has been carried to a capital surplus account, whole of which has been applied to writing down certain fixed assets.

LAW UNION AND ROCK INSURANCE CO., LD.

In the life department in 1932, 2,845 policies were issued, assuring £2,447,392, the net business retained at the Company's own risk being £2,298,476. Net premiums amounted to £722,871 and annuity purchase money to £66,849 Claims by death and by maturity amounted to £709,828, the death claims being £76,000 less than in 1931. Surrenders, including surrenders of bonus, amounted to £198,140. The life funds now stand at £10,790,831. Interest earned by the life funds amounted to £3-19-1 per cent., after deducting tax, against £4-9-2 per cent. for 1931.

Net fire premiums amounted to £467,588 (against £493,827); the claims to £204,296 (against £217,694); and the expenses, including commission, to £198,226 (against £206,414). There has been carried to profit and loss account £75,560 (against £81,680). The fire fund amounts to £537,035.

The net premium income of the accident and general account amounted to £205,032 (against £217,753). Claims amounted to £99,647 (against £115,923), and expenses, including commission, absorbed £77,096 (against £79,351). The sum of £33,377 (against £28,205) has been carried to the profit and loss account.

The income from all sources of the fixed term assurance fund was £56,613. The sum of £4,824 has been carried to the profit and loss account, and the fund at the end of the year amounts to £209,597.

Underwriting profits for the year totalled £113,763 (against £111,386); the shareholders' proportion of life profits was £32,184 (unchanged), and interest on investments amounted to £59,749 (against £60,703). A dividend of 8s. per share—less tax—having been paid in November last, the directors now propose to pay on 1st May, a further dividend of 8s. per share—less tax—making a total distribution for the year of 16s. per share (unchanged), or £137,250.

CALEDONIAN INSURANCE CO.

The report for 1932 shows that in the life department assurances proposed were 2,188 for £1,613,966, and assurances granted 1,887 for £1,271,525. Premiums were £84,428, including £45,419 by single payments, whereof there was reassured £32,033 at premiums of £906. The total net premium income was £558,346. Immediate annuities granted were 197 of £17,842 for purchase money of £211,600. Death claims, including bonuses, were £276,090. Endowments matured, including bonuses, were £195,075. Annuities which have ceased by death were 24 for £2,142 per annum. The life assurance and annuity fund amounted at the end of 1932 to £7,225,245, the addition for the year being £397,292. The contingency fund, which amounted to £200,000 on 1st January, 1932, has been applied to write down the book value of investments. The average rate of interest earned during the year on the life and annuity fund (excluding reversions purchased) was £4-4-0 per cent., after deduction of income-tax.

In the fire department net premiums were £808,939, and interest on fire funds was £40,055. Losses (55.75 per cent.) were £450,976, and commission and expenses (45.01 per cent.) were £364,132, leaving £33,885. There was a decrease in reserve for unexpired risks of £10,212, giving a surplus on the year's trading (transferred to profit and loss account) of £44,097.

In the accident, employers' liability, general, and motor departments premiums were £495,445, and losses £320,210. The sum of £30,000 has been transferred from profit and loss account to general department as a special provision for contingent claims not yet intimated in connexion with long-term policies, and £8,000 has been transferred from profit and loss account to motor department. The additional reserves of the following departments have been reduced to the extent of:—Employers' liability department, £687; general department, £18,785; motor department, £14,821; while the additional reserve of the accident department has been increased to the extent of £955.

In the marine department the net premiums were £121,908. Claims paid in respect of 1932 were £35,313, and the claims in respect of 1931, including an ample provision for outstanding and contingent claims, were £72,772. The sum of £25,000 has been carried to profit and loss account, leaving £186,861 at the credit of the marine fund.

In the profit and loss account the balance from last year was £141,920. To this have been added:—Surplus on year's fire trading, £44,097; transferred from marine account, £25,000; income-tax deducted from interest received, during 1932 in excess of income-tax liability, £8,000; balance of interest, etc., not carried to other accounts, £26,879. The total is then £245,896. From this sum there have been deducted:—Foreign and Colonial income-tax, £15,565; transfer to general insurance account, £30,000; transfer to motor insurance account, £8,000. The amount at credit of profit and loss account at 31st December, 1932, is then £192,331.

The directors recommend that £5,000 be carried to the staff fund, and that a dividend be declared at the rate of 15s. per share, subject to tax, leaving £100,144 to be carried forward.

SCOTTISH UNION AND NATIONAL INSURANCE CO., LD.

The report for 1932 states that 2,834 new life policies for £2,716,467 were issued, the premiums on which amounted to £75,761, of which £8,131 were single premiums. Of the sums assured £179,591 with premiums of £4,526 were reassured. Claims, including bonus additions, but under deduction of sums reassured, amounted to £765,371. The net considerations received in respect of new annuities for £15,328 amounted to £149,714. Annuities amounting to £4,326 terminated. The shareholders' proportion of the profit realized for the quinquennium just ended, amounting to £193,973, has been carried to profit and loss. The life and annuity fund has increased by £80,429.

The premium revenue in the fire account was £1,050,878, and the amount available on adjustment of the fire insurance fund was £52,305. Claims were £629,784 and commission and other expenses £471,782, and after including the interest, less tax, on the fire fund, the surplus carried to profit and loss was £59,790.

Transfers have been made to profit and loss of £3,239 from the accident account, of £3,547 from the employers' liability account, of £5,420 from the sinking fund and capital redemption account, of £26,877 from the miscellaneous account, and of £50,000 from the marine account.

The bonuses to life policyholders declared by the directors have already been announced. The actuary's quinquennial report disclosed a total surplus in the life assurance and annuity fund of £1,702,978. Of this £1,083,010 has been allocated to life policyholders, £193,974 has been transferred to profit and loss account, and £425,994 has been carried forward to next investigation.

The profit and loss account shows that, including the net amount of £308,340 brought forward, the total available is £729,847. After providing for taxes, etc., and transferring to contingency fund £100,000, to fire insurance fund special reserve £100,000, and to special reserve, to miscellaneous assurance account, £20,000, the directors propose to pay a dividend of 13s. on the "A" shares and 48s. 9d. on the "B" shares (both unchanged), carrying forward £311,864. The dividend will be payable in equal instalments on 1st June and 1st December next.

ROYAL EXCHANGE ASSURANCE CORPN.

The report for 1932 states that during the year 5,790 proposals were completed and paid for in the life department assuring £3,088,297 at single and full annual premiums of £181,474. Reassurances for £210,195 were effected at premiums amounting to £30,778. The total net premium income for 1932 was £1,043,698—an increase of £68,627 over 1931. The gross interest earned was £536,525, being £5-13-8 per cent. on the life fund. The total income from premiums and interest was £1,488,689, an increase of £84,916. Claims paid and outstanding amounted to £546,686. Of this claims arising from death accounted for £253,775, which was below the amount expected on the basis of the mortality tables used. The sum disbursed for surrenders, including bonus, was £151,528. Management expenses and commission absorbed £166,279. The life assurance fund amounts to £9,974,129, which includes the special bonus equalization fund of £250,000. The rate of interim bonus is £2 per cent. compound on sum assured and existing bonus, in respect of each full year's premium due and paid on or after 1st January, 1931.

In the annuity department 394 immediate and deferred annuities, securing £34,107 per annum, were issued in consideration of purchase money and premiums amounting to £368,170. During the year 59 annuities terminated by death and eight by surrender and lapse, representing a total net payment of £5,996 per annum. The annuity fund stands at £1,460,126.

In the capital redemption department 56 proposals for sinking fund policies were completed, assuring £273,715 at premiums of £34,384.

Net fire premiums, £1,673,305 (against £1,623,680); total income from premiums and interest, £1,715,550. Losses amounted to £874,368, commission absorbed £357,562 and management expenses £429,701. The profit of £157,798 has been transferred to the profit and loss account. The fire fund amounts to £1,269,322.

Net premiums in the marine department amounted to £639,838 (against £462,058), and the total income from premiums and interest to £656,171. Losses paid in respect of 1932 and previous years absorbed £651,971 (against £523,494). Management expenses took £85,743. The marine fund now stands at £864,452.

In the general accident department the net premiums amounted to £1,219,712 (against £1,117,206) and the total income to £1,256,333. Losses paid, £665,800; commission, £192,382; and management expenses, £293,989. The profit was £55,961.

The balance of the profit and loss account (general reserve fund) is £957,481. The directors recommend a final dividend of 17 per cent., making 27 per cent. for the year (unchanged).

ATLAS ASSURANCE CO., LD.

In the life department in 1932, new policies numbering 3,497 were issued assuring £3,415,475 at annual premiums of £85,246 and single premiums of £45,696. The sum of £162,317 was reassured at annual premiums of £3,371 and single premiums of £1,271. Claims by death numbered 538 for £269,425, including bonus additions. In addition, 321 policies matured assuring £142,513. The consideration for 741 new annuity bonds was £741,843. Total revenue amounted to £2,088,931, and the life and annuity fund increased during the year by £1,160,411, and stood at 31st December last at £9,063,919. A valuation of the assets and liabilities of the life department shows a total surplus, including £371,469 brought forward, of £653,686, which has been dealt with as follows:—Applied to strengthening reserves, £32,000; interim bonuses on reassurances, £2,944; distributed to policyholders in the form of a reversionary bonus in respect of the three years 1929, 1930 and 1931 at the rate of 48s. per £100 per annum calculated on the sum assured and existing bonuses, £430,328; written off securities, £9,303; net loss on investments realized, £8,595; proprietors' percentage of premiums in lieu of profits, £24,309; balance carried forward, £146,206. The fund during 1932, earned interest at £5-0-10 per cent., after deduction of income-tax, and the expenses, including commission, were £13-16-3 per cent. of the premium income.

Net fire premiums, £1,907,860; net losses, etc., £1,047,086. After charging commission, expenses, and foreign taxes, and adjusting the reserve for unexpired risks, the account shows a profit of £49,238, which has been transferred to profit and loss.

Net premiums in the employers' liability, accident and general department, £460,654, and the claims paid £228,816. A profit of £44,976 has been transferred to profit and loss.

Net marine premiums, £135,014, which, with the balance brought forward, made a total of £496,040. Claims paid and other outgoings 1931, and previous years, and claims paid 1932 account, were £113,072, and the expenses of management £14,447. The fund now stands at £368,520.

Premiums in the sinking fund and capital redemption account, £48,858, and interest on the fund, less tax, £15,048. Maturities, surrenders, commission, and expenses amounted to £62,459. The profit of £7,813 has been transferred to profit and loss, and the fund now stands at £389,936-4-0.

As already announced, the dividend for the year is unchanged at 8s. a share. After paying this the funds of the company will total £13,784,580.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORN., LD.

The report shows that the total income from all sources amounted to £7,826,512, compared with £8,194,715 the previous year. The balance at credit of profit and loss account, including £474,314 carried forward from last year, amounted to £841,892. After paying a dividend of 5 per cent. on the Preference and 14s. per share on the Ordinary shares (unchanged), transferring £10,000 to the Staff pension fund, and £150,000 to the general reserve fund, making this fund £750,000, a balance of £488,767 is carried forward. The total funds, including capital at call, now amount to £13,979,268. New life business amounted to £1,864,231, as compared with £2,098,669 for the previous year. The life, annuity, and capital redemption funds now amount to £3,643,850. In the accident and general account the premium income amounted to £6,230,990, as compared with £6,687,719 for the previous year. Losses paid and outstanding amounted to 59.95 per cent. The net premium income in the fire department amounted to £548,800, compared with £601,833 for the previous year. Losses paid and outstanding amounted to 52.18 per cent. In the marine department the net premium income amounted to £137,579, compared with £86,428 for the previous year, and a sum of £126,245 is being carried forward.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LD.

The gross trading profit for the year ended 28th January last amounted to £609,119 (against £646,094 for the previous year). The net profit was £121,263 (compared with £112,251 after reserving £8,505 income-tax), which, with the sum brought in, makes a balance of £227,705 (against £246,000). The interim dividend on the Ordinary shares absorbs £34,167, and, as already announced, the directors recommend a final dividend of 10d. a 10s. share, making 1s. 3d. a share, or 12½ per cent., for the year (the same). The subsidy to pensions redemption fund this year amounts to £13,393 (against £28,553), leaving £111,812 to go forward (against £106,441 brought in). The balance-sheet shows floating assets at £1,504,000; current liabilities, £824,000.

WORLD OF INDIAN FINANCE

Friday, May 19.

Credits have eased off appreciably; and a stage was reached, especially in Bombay, when money was a drug in the market. Calcutta, too, witnessed something of a glut on Thursday. Towards the finish, however, a less easy feeling prevailed, thanks to the usual Friday demand in respect of payments on Treasury Bills allotted on the tender day. Early in the week, that is, on May 15, payment was due on the outstanding balance of 5 per cent. 1929-47, which came to Rs. 4.18 crores. But on Monday and Tuesday, there was no appreciable relaxation of monetary pressure either in Clive Street or Hornby Road. From which one should gather that the holders of scrip in these two financial centres could not have been many. If this assumption be correct, it follows that a goodly portion of the released funds from 1929-47 Loan should have been payable to scrip holders upcountry. This means, on the one hand, that applications for repayment would come in only slowly; and that, on the other hand, the funds received by the mofussil holders would trickle back to the money market in tardy fashion. Yet another conclusion can be drawn. To the extent that holders in Calcutta, Bombay and Madras have received payment, these might, to some extent, represent the investment of money market interest in this loan as a good substitute for short-term bills. It will be remembered that as the yield on three months Treasury Bills was beginning to drop rapidly, banks and other like institutions were turning their attention to the scrips maturing at an early date; and as such bonds were yielding a more favourable rate, whatever was available of stocks in 1929-47, 1933, 1933-36 and 1931-36 was picked up as the best alternative to Treasuries. We believe that of the discharges effected last Monday, anything like Rs. ¾ crores to Rs. 1 crore might represent the short-term investment. Of the mofussil holders, most of their funds now set free should find their way back to some kind of giltedge or other. Our own estimates based on the above reasoning is that of the Rs. 4.18 crores paid out to the holders of 5 per cent. war loan, Rs. 3 crores might yet return to the Government securities market. At the moment, the violent fluctuations that were witnessed in the last twenty days are calculated to delay the process of the investment of these funds. But as soon as steadier conditions come to prevail in the giltedge market; and as soon as confidence is revived that there can be no more setback of a serious kind, the pent-up investment power is bound to make itself felt. At the same time there are further important payments to be received by the market in the near future. Rs. 4.17 crores is due on July 1, on account of the repayment of the 1931-36; Rs. 8.90 crores on August 15, on 1933-36; and Rs. 4.25 crores on September 1, on 1933. We discussed this matter, at some length, in the editorial section in so far as these developments have a bearing on the giltedge situation, present and prospective.

So far as the money market is concerned, there can be no doubt that short intervals between the dates of redemption of the four loans are calculated to induce and emphasise easy monetary conditions. While, in the early part of the week, the return of funds from 1929-47 did not make much of a difference in the money market, there was marked ease in the latter half. The discharge of 1929-47 is, of course, one of the causes for slacker money, though it was not so pronounced as was to be expected from the fact that Rs. 4.18 crores was to be returned. An even more important factor in the development of easy conditions is the substantial sales of sterling, which the market has made to the Government in the current week. On the weekly sterling tender day, applications at 1s. 6 3/32d., came to £270,000 and those at 1s. 6 1/16d., came to £41,575,000. From these results, we should infer that the market should have sold a fairly large quantity of sterling at the tap-rate to the Controller of the Currency. It would appear that banks in Bombay have covered their bull bills by sterling sales. In the present stage of the giltedge market, bankers are afraid of touching giltedge securities. The funds received from sterling sales have, therefore, been kept on hand, thus leading directly to markedly easy money conditions.

In this connection, it is interesting and useful to make a somewhat careful study of the Treasury Bills position today. The maturities are more than double of the renewals. On balance, the market is, therefore, in receipt of substantial funds. The rate for three months Bills is now on the basis of 1¼ per cent. yield. In spite of Treasury Bills Maturities

exceeding fresh sales of Bills, there is noticeable a reluctance on the part of banks to invest in three months Bills at current rates of discount. It must be admitted that there has been a good demand for money on account of the cash section of the last rupee loan. Such funds as can be spared by banks have been readily taken up by giltedge operators. Owing to the remunerative employment of funds in the way of accomodation against giltedge, the interest of bankers in three months Treasuries has been on a restricted scale. At the same time, a possible explanation for the reduced volume of applications on Treasury Bills tender day is that the yield of 1¼ per cent. is not altogether attractive. On May 16, applications for the Rs. 1 crores on offer came to Rs. 65.25 lakhs. The average rate of accepted tenders was Rs. 1-3-11 as against Rs. 1-3-7 on May 9. Thus, while applications are dwindling, the discount rate is rising. Owing to the renewals of Bills being consistently less than maturities, the total of the floating debt with the public has now shrunk to slightly under Rs. 20 crores.

The cash balance of the Government with the Imperial Bank inspite of the cash received on the last loan, was Rs. 6.45 crores on May 12. On May 15, payment had to be made of Rs. 4.18 crores on account of the 5 per cent. war loan. It is, therefore, likely that the statement for the week ended May 19, which will be issued next week, may show a ways and means advance of anything like Rs. 3 crores availed of by the Government from the Bank. And considering that fresh sales of Bills are substantially lower than maturities, further borrowings on ways and means account are quite on the cards. At this rate, it may be expected that by May-June ways and means advances lent by the Bank to the Government might mount to Rs. 7 crores to Rs. 8 crores. While as a temporary device, this facility of ways and means advances is quite satisfactory, other measures will have to be adopted to strengthen the cash position of the Treasury. While, as we have shown, ways and means advances to the Treasury by the middle of next months might aggregate Rs. 7 crores to Rs. 8 crores, the floating debt might come to be reduced, for the same reason, to Rs. 15 crores by that time. The ways and means position of the Government is planned, presumably, on the basis of Treasury Bills remaining roundabout Rs. 25 crores. In the course of June it should, therefore, be necessary to take steps for increasing the realisations from Treasury Bills.

So far as three months Bills are concerned, any undue increase in the yield offered thereon should, if possible, be avoided. If it is found that three months Bills on an yield basis of 3½ per cent. per annum are not sufficiently attractive to banking circles, an alternative is not an enhancement of the yield to a more attractive level, but the offer of other types of Treasury Bills on terms and conditions which might appeal to bankers. From the point of view of the giltedge market, it is undesirable to make any more tempting offer on three months Bills. In recent months, the less the average accepted rate on Treasury Bills tender day, the more bullish has been its influence on the giltedge market. Conversely any increase in the average rate of accepted tenders would be a bearish factor in giltedge. We would, therefore, suggest that the Government should discontinue three months Bills in June and introduce six months and nine months Bills. Considering that six weeks or over of the six months Bills and five months of the nine months Bills would be part of the busy season, the Government would be quite justified in offering a higher interest yield on Bills of such maturity. The objective to be kept in view is to bring back the floating debt to the neighbourhood of Rs. 25 crores.

The proposals we have discussed would mean an expansion of the floating debt by Rs. 10 crores, as against which the market would have received Rs. 21½ crores from the maturing loans prior to the first week of September. We do not therefore, look forward to any change from the present phase of easy money.

Compared to last week and the early part of this week, exchange was inclined to be somewhat subdued at the close. Only two or three days ago, the market was quite spirited, with Bills showing in large volume and spread over all forward positions. Owing to the advancing prices of jute and hessian, considerable enquiries from foreign countries have been received; and business on a fairly large scale has materialised. The present tendency in the jute and hessian markets is distinctly upwards. This is bound to stimulate exports on a larger scale. Those in the know believe that there is a fair amount of export bills yet to come in the near future. In fact, towards the closing hours of Friday, there was an emergence of a fair volume of bills. But in the mid-week bills were somewhat less than the earlier days. On the weekly sterling day applications for £275,000 was received on the basis of 1s. 6 3/32d., and applications for £41,575,000 at 1s. 6 1/16d. The former was allotted in full and the latter approximately 1¾ per cent.

The closing rates are: 1s. 6 1/16d., May-June T.T.; 1s. 6 1/32d., July-September T.T. and possibly October T.T.; 1s. 6d., October T.T.

Bills may be quoted: 1s. 6 5/32d., May-June; 1s. 6 5/32d., and 1s. 6⅛d., combined July; 1s. 6⅛d., August-October and possibly November; 1s. 6 3/32d., December-January combined.

Money has been appreciably easier in the latter part of the week. There was, however, some Friday pressure towards the close. Interbank call money may be quoted 1 per cent. Union rates are ¾ per cent. for call, three days and seven days' notice; 1 per cent. for one month deposit, 1¼ per cent. for two month deposit and 1½ per cent. for three month deposit.

OTHER INDIAN MONEY MARKETS

(*By Wire*).

Bombay. Money was distinctly easier and even practically unlendable at the close. Inter-bank call money is quoted nominally 1 per cent.

Exchange has been steady with banks selling T.T. 1s. 6 1/16d. upto July, 1s. 6 1/32d. August-September and 1s. 6d. October-December.

Karachi. Money conditions have been easy, the market being supplied fully with funds. There are lenders of call money at one per cent. but no borrowers. Contrast may be made to conditions last week when day-to-day loans were unobtainable even at 4 per cent.

Exchange has been steady with sellers of ready T.T. at 1s. 6 5/64d.; July 1s. 6 1/16d.; August 1s. 6 3/64d. and October 1s. 6 1/32d. Three months bills are quoted 1s. 6 5/32d.

Rangoon. Quiet conditions prevail in the money market.

Exchange is steady with sellers at 1s. 6 1/16d. May-June; 1s. 6 1/32d. July-December. Bills May be quoted: 1s. 6 3/16d.

FINANCE ABROAD.

Germany has been the first to pay America back in the same coin. As was foreshadowed in the "Overseas" Section of *Indian Finance* a fortnight ago, she has refused to pay the instalment on the Young Plan, due during the week, in gold or its equivalent in currency. Like the Liberty Bonds, the Young Loan agreement also contained a gold clause; and strictly speaking, Germany has the obligation to pay the instalment on the Young loan in gold or the equivalent of it in the national currency. It would appear that the Bank for International Settlement has refused to accept payment except in gold, as that would be in contravention of the agreements. Being a third party charged with the mere administration of the payments in connection with the reparations, the Bank could not possibly do otherwise. But the German position is not quite understandable. Germany argues that, if America can so quietly ignore the gold clause, not only in respect of her international obligations but also in respect of her foreign obligations, other nations would be entitled to take a similar step in regard to their obligations to America. From the strict legal standpoint, Germany could not have the right to pay the instalments of the Young Loan in any debased national currency. For the Young Loan was an international issue subscribed on the strength of international understanding and every assurance that the good faith of the nations was behind it for the due discharge of the obligations. On the other hand, in the case of America, the gold clause refers in large part, to internal obligations, which are necessarily governed by the laws of the country. It is neither commonsense nor accepted jurisprudence that the law-making powers of a country's sovereign legislature could be limited by the contracts between private individuals or even the contractual obligations of the Government. The only limit on the sovereign would be the practical requirement of preserving faith in the words of the Government and stability of business conditions. But everyone will agree that the narrower conceptions of contractual obligations must give way before the unquestionable ethics of lightening the burden of past indebtedness. As we have observed on an earlier occasion, foreign bond holders may be supposed to stand on a different footing and may claim a differential treatment. But the administration in America argues that such a distinction would have the effect of encouraging on a large-scale the domicile of American securities in foreign hands. This would imply that, if administratively such a domicile could be prevented, the American Government would have less objection to settle its foreign obligations in gold or its equivalent. To this, the *Financial News* argues in Air Mail week that nobody who is familiar with the administration of control over foreign securities, can deny that such a domicile could be effectively prevented. If this is so, then there can be no doubt that the action of the American Government in offering only a debased dollar in payment of their foreign obligation is highly indefensible. But it is only fair to mention that the American Government is not with precedent in this matter, as Great Britain not only paid some of her obligations in sterling but also has got a regular judicial finding that debts can be settled only in the legal tender of the country. Mr. Roosevelt had possibly, this in mind when he announced, during Air Mail week, that when foreigners consented to invest in American securities, they must have been prepared to have their claims governed by the laws of America..

It will be clear that an analysis of the relevant facts and theories will not yield any definite conclusion. From the ordinary commonsense standpoint, there can be nothing very iniquitous in paying America in the same coin. For she would stand to lose little; for the gains on the one hand must outweigh the loss on the other. From the economic standpoint, no one can regard it as unwelcome that, as a result of certain developments in the chief nations of the world, there will be a general scaling down of international obligations. If the chief benefit which is sought to be derived from the rise in prices, for which all the international conferences are working, is the lightening of the burden of debts,

it is incomprehensible why there should be so much fuss over the logical implications of the devaluation of currency.

While this may be clear it is, at the same time, more or less certain that the action of Germany should be creating much bad blood among the nations. The worst of it is that in judging the step now taken by Germany, the nations are sure to import some extraneous considerations.. Neither England nor France is likely to forget the need for offering a decisive check to the present German Government in its policy of baiting the nations and flouting international opinion. To people outside Europe, the justice of the German demand for rearmament and for the revision of the Treaty of Versailles would seem to be altogether beyond doubt. Equally would it seem just that, if the European nations are to put obstacles in the way of Germany regaining her own, such nations ought to lose the esteem and consideration of Herr Hitler and his colleagues. But there is in Europe the fear that the concession of Germany's just demands would only increase the aggressiveness of the Nazis and that the only way of avoiding it is to deny even the legitimate claims of Germany. It is quite possible that Germany's refusal to pay the Young Loan instalment in gold would widen the breach that has already occurred between Germany and other nations over other international questions and such loss of international goodwill as may occur therefrom is bound to have its repercussions on the world economic conference and all other questions which hang on its successful issue.

Agreement re. Silver.

If international conferences can do it, the prospects of silver have been advanced further by the agreement concluded during the week between the representatives to the Economic Conference of the United States, Canada and Mexico. According to *Reuter*, it is learned that the main points of agreements are to—

(1) call a halt in debasing silver coins ;

(2) the substitution of silver for smaller currency ;

(3) the return of silver to its natural fineness in coins and

(4) the employment of silver in the reserves of Central Banks.

It is obvious that these measures require to be supplemented in one important respect, namely, the restriction of production. But this is complicated by the fact that two-thirds of the world's production of silver is as a bye-producct ; and any scheme of restriction, to be effective, must include within its scope the restriction of production of copper and lead. It would appear that no agreement has been reached in this regard though the question was discussed at length by the representatives at Conference. Another source of strength to the silver position is the decree signed by President Machado providing for the coinage of 6,000,000 dollars of silver and the issue of silver certificates for the same amount which is to be guaranteed by coinaged silver, to be held in the Urban Treasury.

The Tariff Truce.

The Organising Committee of the World Economic Conference which met at the foreign office under the Chairmanship of Sir John Simon have given to the world the result of their labours in the form of a *communique*. The main proposal of the committee was the tariff truce which was first suggested by Mr. Roosevelt and supported by Mr. Ramsay MacDonald on behalf of England and Dr. Schacht on behalf of Germany. The resolution which was discussed by committee consisting of the representatives of Germany, Belgium, France, Italy and Japan is as follows:

'The Governments of the United Kingdom, Germany, Belgium, United States, France, Italy, Japan and Norway, represented on the Organizing Committee for the Monetary and Economic Conference, are convinced that it is essential for the successful conclusion of the conference that measures of all kinds, which at the present time misdirect and paralyse international trade, be not intensive, pending an opportunity for the Conference to deal effectively with the problems created, and thereby recognize the urgency of adopting at the beginning of the Conference a "tariff truce," the provisions of which shall be laid down by common agreement.

'The said Governments are further convinced that the immediate action of great importance for themselves is to agree, and strongly urge all other Governments to participate in the Conference and to agree that they will not, before June 12, nor during the proceedings of the Conference, adopt any new initiatives which might increase the many varieties of difficulties, now arresting international commerce, subject to the proviso that they will retain the right to withdraw from this agreement at any time after July 31, 1933, on giving one month's previous notice to the Conference.

'One of the main motives which brings the Governments together in Conference is to surmount the obstacles of international trade, referred to above, and the said Governments, therefore, urge all other Governments represented at the Conference to act in conformity with the spirit of this objective.' "

As for implementing the tariff truce, Great Britain has already set a bad example by what in effect may be called forestalling the truce. Our Overseas columns this week give a full account of the tariff changes recently made by Great Britain, which show that the British Government has had a bout of protectionist activity. And now Mr. Neville Chamberlain has announced that though the Import Duties Advisory Committee would continue to hold the tariff enquiries imposed on it by statute, no duties would be imposed except on applications received before May 12th. The information has also been vouchsafed that the only application outstanding is that of the silk industry.

More Trade Agreements.

Despite the readiness with which the British Government have fallen in with Mr. Roosevelt's proposals for a tariff truce, it is to be doubted whether Great Britain will again command the same sincere interest in free trade as formerly. The present National Government, at any rate, seem to recognise that the changes in world economy necessarily imply that Britain should be dependent more and more on internal production and less and less on the foreign markets. It is in pursuanace of such an idea that she strove might and main to bring about a system of Empire trade and supplement it by a series of trade agreements. The last of this series has now been announced. For some time, negotiations have been carried on between the Government of the United Kingdom and the Governments, respectively, of Norway and Sweden. It is well-known that in many respects Great Britain has intimate relations with the Scandinavian countries. And now that trade agreements with these nations have been brought about after similar arrangements with Denmark, Germany and Argentina, the national government might feel with some reason that, even in the difficult conditions that rule to-day in world trade and finance, they have succeeded in giving some stability to the country's foreign trade. What distinguishes the agreements with Sweden and Norway from the other agreements mentioned is the anxiety of the British Government rather to stabilise present relationships between them, than to bring about any serious changes in the tariff systems. It is very encouraging that no increased duties on the imports of other countries have been contemplated in the agreements. The purpose would rather seem to be to secure equality of competition between internal production and imports from foreign countries such as was vainly sought to be secured in the Dominions for British exports.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicalitv.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 88/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 4⅛ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 3 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3¾ per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

BOMBAY

CALCUTTA SHARE MARKET.

Jute.—The market opened very firm on Monday in sympathy with a strong hessian market. Since Saturday private business had been done at advancing rates and prices had improved As. 3 to Rs. 10-6. This necessarily had a strengthening effect on Howrahs which had improved to Rs. 52 on Sunday evening. On Monday, Howrahs opened at Rs. 51-15 but towards the close dropped down to Rs. 50-4. Kamarhattys also touched Rs. 498 but later came down to Rs. 482. Among other big denominations business was restricted for want of interest from investors. Bombay was mostly a seller at every advance. This had the effect of bringing down values in many instances although the price of hessian and speculative counters were well maintained. Albion came to business at Rs. 266. Reliance recorded business at Rs. 301-8, Anglo-Indias improved to Rs. 362, but receded again Rs. 358, Aucklands were dealt in small lot at Rs. 202, Ballys were wanted at Rs. 162, but later were placed at Rs. 153 to improve again to Rs. 157, Barnagores were placed at Rs. 153, and later at Rs. 146, Belvedere, Budgt-Budge and Caledonians all came to business at Rs. 392, Rs. 370 and Rs. 525 respectively. Cheviots receded from Rs. 240 to Rs. 233, Dalhousies from Rs. 397 to Rs. 385, Kankinnarrahs from Rs. 445 to Rs. 438, Gourepores on declaration of Rs. 5 dividend were easy at Rs. 335, Orients were placed at Rs. 230, but later at Rs. 227, Standards were wanted at Rs. 345 but later came down to Rs. 340, Howrahs also fluctuated between Rs. 50-8 and Rs. 51-10 but the undertone was steady.

Cotton.—This section was featureless during the period under review. Bengal Nagpurs had sellers at Rs. 22 while Kesorams were freely dealt roundabout Rs. 3-10 and Muir Mills at Rs. 240.

Coals.—Scattered deals took place in this section on investment account. Katras Jherriah were wanted at Rs. 27-8 without many sellers. Raneegunge dropped Rs. 2 to Rs. 30 from the recent quotation of Rs. 32. Bengal coals were on offer at Rs. 215, Amalgamateds were steady at Rs. 13-8, Seebpores came to business at 14 premium, Burrakurs were easy at Rs. 10-8, Pench Valley recorded business at Rs. 30-8, Deolis at Rs. 6-8 and East Indias Rs. 12-6.

Miscellaneous.—Electric issues were as popular as ever. The notable features being Benares, Bareilly, Agra and the United Provinces which had buyers at steady rates. Bengal Telephones had frequent dealings at Rs. 15, Burma Corporations fluctuated between Rs. 8-2 and Rs. 8-6 according as the price of silver rose or fell. Triton Insurance was dealt at Rs. 168 and there was good enquiry for Andrew Yules recent issue called Concord Insurance at about Re. 1-4 premium. Among Engineering concerns, Indian Irons were on offer at Rs. 5-6, Indian Standard Wagons were placed at Rs. 50-8 while Burn & Co., were easier at Rs. 148. Among Flour shares, Hooghly flours had buyers at Rs. 14-12, without any sellers owing to improved prices of which while Bengal Flours changed hands at Rs. 136. Paper shares were steady, Bengal Papers being dealt at Rs. 67-8. Midnapore Zemindaries were lower at Rs. 62 on reports of no dividend. Among Shipping concerns, Port Shipping were dealt at Rs. 11-4. Sugar shares were steady with a fair turnover and prices were well maintained. Bolorampurs improved to Rs. 12 while Murree Brewery were down at Rs. 160. Reliance Firebricks were crossed at Rs. 7-8 while Great Eastern Hotel had puyers at Rs. 117.

Banks, Railways and Debentures.—Imperial Banks Contributory and fully paids were steady at Rs. 293-8 and Rs. 1,225. Central Banks were dealt at Rs. 22 but easiness of security's market accounted for the limited turnover. Among Light Railways, Hoshiarpur-Doabs were down at Rs. 82-8, Kalakhat at Rs. 73, and Sara Serajgung at Rs. 82-8. Jute Mill debentures were very hard to obtain while preference shares were fully steady without many offerings. Lansdownes had buyers at Rs. 106 inclusive of (Pref.) dividend while Kamarhatty (Pref.) were placed at Rs. 116, B.I.C. (Pref.) were dealt at Rs. 104 and Indian Standard Wagon (Pref.) at Rs. 107. Cawnpore Sugar (Pref.) came to business at Rs. 133 with buyers over.

Government Securities.—This section witnessed a bout of speculation and fluctuation unseen for many years in the history of security dealings. 3½ per cent. Paper after the previous week's depression opened at Rs. 81, and rapidly declined to Rs. 77-12. Later on in the day bear covering brought up the prices to Rs. 80 but nervousness prevailed in the market, and prices again dropped to Rs. 78-8; 4 per cent. 1960-70 and the New Loan 3½ per cent. 1947-50 were also subjected to heavy selling pressure. As the week advanced a slightly better feeling set in and prices of 3½ per cent. recovered to Rs. 81 on Tuesday and Rs. 82-10 on Wednesday. There was a proportionate rise in other issues also. Bombay Stock Exchange suspended forward dealings in 3½ per cent. Government papers and this led to nervous selling by Bombay holders in Calcutta market. Calcutta could not absorb the load of such heavy sales and prices gave way. The reverse movement also set in by "bears" rushing forward to cover up their sales. London advices of sterling 3½ per cent. Indian Loan improved to 2 per cent. on the week's trading and this helped prices of 3½ per cent. paper to recover the lost ground. The tone of the market at the close was fairly steady. The Bank rate remained unchanged at 3½ per cent.

Tea.—This section was steady and with returning interest a fair turnover resulted. Bishnauths had buyers at Rs. 20, Betjans were placed at Rs. 19-8, Hassimaras were firm at Rs. 31, Huldibaris improved to Rs. 20-8, Jutlebaris were marked at Rs. 12-8, Tejpores at Rs. 4-4, East Indias Rs. 12-12. The general trend of the market is towards improved levels.

BOMBAY SHARE MARKET.

From our Correspondent.

(By Wire.)

May 18, 1933.

Shares in general have been easier owing to the absence of fresh purchases. The market is anxiously awaiting Government's decision regarding anti-dumping duties on non-British cotton textiles. The share market will continue to be closely affected by the prospects of giltedge securities.

Bank shares were easier due to decline in giltedge securities.

In the giltedge market, the 16th may settlement passed off smoothly after a most severe setback in prices. There was only one small failure. On rumours of official support to giltedge, the market was found to recover gradually, but the action of the authorities in this respect was considered too timid either to hearten bulls or to frighten bears. The tone of the market at the close is uncertain.

RANGOON SHARE MARKET.

From our Correspondent.

(By Wire.)

May 18, 1933.

The chief feature in the oil market has been Burma Oil Company's announcement of final dividend at 15 per cent. which took the price of Burma Oils to 42, only to ease again to 40/- in sympathy with the easier tendency of oil shares in the London market. Indo-Burmas remain firm at 88/-.

Rangoon Tramways are quoted 22½ but scrips are scarce. Burma Corporations remain firm at 8⅝. Consolidated Tins may be quoted 2½.

NEW REDUCED
without profit RATES.
Rs. 5-7 a month
(that is Rs. 1,305 only in 20 years) will secure

JUTE AND JUTE GOODS.

JUTE.

The Jute market during the week under review ruled very firm in consequence of brisk demand both from the local mills and the foreign consumers. Mills were free buyers at advancing rates and a considerable quantity of loose jute was purchased by them up to Rs. 5-8 for XLR's and Rs. 6 for LR's. Prices for Ready Firsts rose from Rs. 31 to Rs. 33 with sellers showing great reserve. The Futures Market was also very active and due to strong demand for Pucca bales the weight of May deliveries was greatly discounted by balers having covered their sales on the Futures Market. Taking everything into consideration the position appears to be extremely healthy and there is no chance of any serious set back in prices taking place before the sitting of the World Economic Conference on the 12th June. The future trend of the market thereafter will depend upon the developments in that Conference. If the present demand continues, it is expected that after the 25th of May, if not earlier, there may be still further improvement in the prices of Raw jute. Crop reports are satisfactory so far, though slight damage is reported from Sirajgunge as a result of heavy hail storm on the 16th.

Quotations of the East India Jute Association for May and October futures are:—

May 18	33 8 0	37 12 0

HESSIAN.

Market during the week has ruled very active with almost boom conditions prevailing for the past two or three days. Consumers have bought very heavily and all offers from Calcutta have been accepted by American buyers at higher rates. There has been a very brisk demand for sacks also and mills have sold their output right to end of June next year. The demand from River Plate and North America still seems unsatisfied and the market is looking very healthy in every respect. We close very strong with the Futures for 40"×8oz. ruling at Rs. 10-12 showing a rise of nearly a rupee over last week's closing rates.

JUTE CROP.

Messrs. Sinclair Murray and Co., in their crop report for the week ended May 13, say:—

General.—The weather during the week has been favourable and the crop has made good progress.

Narayanganj.—Sowings 16 annas completed. Weather during the week has been favourable and good progress has been made with weeding operations. Condition of plants satisfactory and they range in height from seedlings to 4 ft. River is about 6" higher than at this time last year.

Chandpur.—Sowings 18 annas completed. Weather during the week has been favourable and plants have made good progress. Condition of plants satisfactory and they range in height up to 4 ft. 6 ins. Weeding operations going on as required. River is slightly lower than at this time last year.

Chaumuhani.—Sowings 18 annas completed. Weather favourable. Plants have made good progress and range in height from 6 ins. to 4 ft. 6 ins. Weeding is going on steadily as required.

Akhaura.—Sowings 17 annas completed. Weather favourable. Condition of plants satisfactory and they range in height up to 2 ft. 9 ins. Weeding is going on as required. River is about 2 ft. lower than at this time last year.

Nikilidampara.—Sowings 15 annas completed. Weather favourable. Condition of plants satisfactory and they range in height from 7" to 2 ft. 6 ins. Weeding is going on as required. River is 5 ins. lower than at this time last year.

Sarishabari.—Sowings 17 annas completed. The weather has been favourable and plants are progressing favourably. Height of plants range from 3 ins. to 3 ft. 9 ins. Weeding is going on as required. River is about 6 ins. higher than at this time last year.

Mymensingh.—Sowings 17 annas completed. Weather has been favourable and plants have made good progress and range in height from 6 ins. up to 3 ft. 6 ins. Weeding operations are going on freely.

Serajgunge.—Sowings 18 annas completed. Weather during the week has been favourable. Condition of plants satisfactory and they range in height from seedlings up to 3 ft. 2 ins. River is about 6 ins. lower than at this time last year.

Bhangoora.—Sowings 17 annas completed. Condition of plants satisfactory and they range in height from seedlings up to 2 ft. 6 ins. Weeding is going on as required. River is about 1 ft. 3 ins. lower than at this time last year.

Madaripore.—Not received.

As a basis of comparison we take last season's crop as 16 annas.

ARRIVALS & EXPORTS OF JUTE.

COTTON AND COTTON GOODS

COTTON.

After ruling very steady during the middle of the week the cotton market in Bombay has been easier towards the close. Broach July/August was dealt up to Rs. 211, the closing being easy at Rs. 201.

The American market has ruled very firm, and the rise in price is more or less well maintained. The local demand during the earlier part of the week was encouraging but the unfavourable political developments in Europe and the threatened breakdown of the Disarmament Conference had a very undesirable effect to bring out speculative and Japanese selling, thus causing the prices to decline.

Technically, on account of the liquidation, the market is stronger and a fresh favourable element will react with double force. The reopening of certain mills in the Bombay Presidency is a healthy sign and in spite of large stocks in Bombay the position of the market is far from depressing. As a matter of fact the rise in Indian cotton is much less than the rise that has taken in America or when compared with the rise in other commodities. Therefore the situation from this standpoint is also optimistic.

The bearish tendency that was noticeable in the New York and Liverpool cotton markets during the last two or three days was due to profit-taking on reports of rains in Texas and the disturbed political situation in Europe. But the opinion has been that the depression will be only short-lived and the net decline in values will be immaterial, President Roosevelt having still large powers in reserve.

The favourable news received during the week was that the Government owned and financed cotton which is not placed under acreage. Option this season will be reserved for similar option next season thereby removing about 20 per cent. supply from the market for two years.

The following are the latest prices available:—

	Last Week	Week This
New York Middling spot ...	8.65	8.65
,, July ...	8.64	8.62
Liverpool Fully Middling spot ...	5.96	6.02
,, (one month future)	5.71	5.78

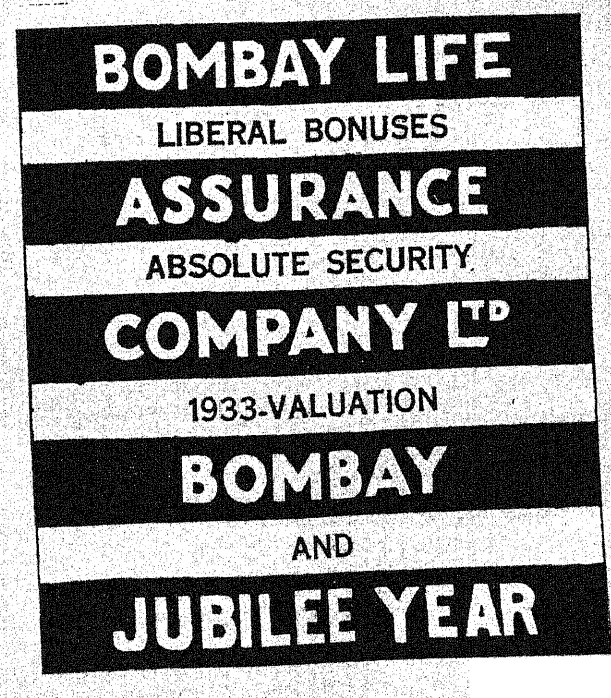
COTTON.

From our Correspondent.

(*By Wire.*)

Karachi, May 18.

The cotton market is quiet due to the deterioration in international situation and favourable American crop reports. After touching 18 a few days back, Sind Desi quoted to-day 17/12 May per Bengal maund which is half rupee above last week.



PIECEGOODS.

Due to the optimistic feeling in all the markets and a steady and continued rise in the value of cotton in U.S.A. as well as in India, there has been a distinctly better feeling noticeable in the piecegoods market. The holders are more firm in their ideas and see a bright future before them. Although there has been no material change in the offtake, but the same is expected to materialise slowly.

There has been a better enquiry in foreign as well as in Indian piecegoods but the business resulting is small. Buyers are not willing to pay higher prices in view of the poor offtake, while sellers are not prepared to discount values due to the present better sentiment in the markets.

Japanese importers are reported to have transacted a fair business for May-June shipment in such popular styles as grey dhooties, grey shirtings, white shirtings, artificial silk fancies and cotton flannelettes at attractive prices.

With regard to the ready position, dealers generally report a better offtake with prices on an upward grade, though there is a lot of room left for improvement. Reports to hand from the various up-country consuming centres indicate clearances on a better scale, principally of Japanese goods.

There is nothing of special interest to comment on with regard to the yarn market, which has remained closed during the period, except that production costs have registered a further all round advance in sympathy with the firmer tendency of the price of cotton. It is generally anticipated that active conditions will prevail when business is resumed on Tuesday and that ready rates will be marked up.

The past week has witnessed a further development of the upward trend of cotton markets, values on the Liverpool, New York and Bombay exchanges having registered substantial advances on the rates recorded in the previous report.

The total number of packages imported into Calcutta from all producing countries, including those from Indian ports, during April are returned at 29,996 packages, *viz.*, 10,577 packages from Indian ports and 19,419 packages from outside ports. This compares with 36,563 packages for the corresponding period last year; 37,592 packages for March; 38,875 packages for February and 42,442 packages for January. The contraction in imports, especially in the case of indigenous goods, for April as compared with the preceding month, reflects the unsatisfactory state of the trade generally, as it will be seen from the following figures that reductions have occurred at all centres of supply:—

	From Great Britain	From Japan	From Indian Ports
	Pkgs.	Pkgs.	Pkgs.
January	6,340	11,687	22,399
February	5,269	9,740	19,999
March	8,693	12,553	14,380
April	6,922	10,418	10,577

According to a report of the United States Department of Agriculture, Japan's exports of cotton piecegoods reached the "record" total of 234,030,000 square yards in February, as compared with only 153,468,000 square yards in January and with only 106,500,000 square yards in February last year. Japan's hold on the Indian markets will be seen from the fact that during twelve months ended March 31 exports from that country to British India amounted to 648,562,000 square yards exported from Britain.

(*Continued from page 895*).

Bombay.—In view of poor fresh arrivals, the market was steady on better demand. Some of the shipments having been diverted to Kathiawar ports, the scarcity was felt all the more keenly. There have been rumours that Holland may go off the gold standard but there is no confirmation of the news so far.

Punjab.—The markets have ruled steady in absence of free sales from Indian producers.

Cawnpore.—Demand at the moment has shown a decline, the interest of the consumer having been transferred to mellons and mangoes. The latter is having a bumper crop this season in U. P.

London.—During the Air Mail week, New York prices rose to 3.37 cents. from 3.25 cents. per lb. a week ago. The tone of the market is quite healthy. Stocks are estimated at 235,000 tons against 110,000 tons a year ago.

Cuban exports are no doubt disappointing, U.S.A. taking 75 per cent. of the quantity exported against 84 per cent. last year. But with the recent rise in New York prices it is hoped that the U.S.A. imports will show better results.

The Japanese and Formosa crop is expected to be 250,000 tons less than last year, or say about 28 per cent. less.

BULLION

GOLD.

During the week under review gold market had ruled steadier during the earlier part of the week, the tendency towards the close due to the appreciation of sterling being easy. Stocks and offtake remain almost unchanged as reported last week. The highest and lowest were Rs. 30-12 and Rs. 30-6 per tola.

London.—During the air mail week the supplies in the London market were considerable. There has been a good demand from the Continent and prices above the Franc parity were paid at times.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 24th ultimo to mid-day on the 1st instant:—

IMPORTS.

	£
Netherlands	1,075,464
France	2,209,120
Belgium	18,570
Switzerland	69,351
British South Africa	1,050,441
British India	649,530
British Malaya	64,826
Canada	298,015
Australia	61,271
New Zealand	29,101
Other countries	23,912
	5,549,601

EXPORTS.

	£
Netherlands	26,175
France	145,522
Belgium	20,000
Italy	531,908
Switzerland	31,000
Other countries	8,259
	762,864

Gold shipments from Bombay last week amounted to about £1,067,000. The S.S. *Britannia* has £315,000 for London and the S.S. *Mooltan* carries £752,000 of which £385,000 is consigned to London, £83,000 to Amsterdam and £284,000 to New York.

Bullion Reserves of the Bank of England on the 10th instant amounted to £186,900,000 being the same as on the previous Wednesday.

The highest and lowest price of gold per fine ounce during the week were—

May 17	...	...	124s. 0d. Highest
May 16	...	...	123s. 0d. Lowest

The highest and lowest prices of Mint gold ready were as follows:—

May 17	...	...	...	Rs. 30 9 0
May 15	...	...	...	,, 30 5 0

SILVER.

Further decline in the values of silver in New York, London and Indian markets has taken place during the period under review. The highest and lowest of the week were Rs. 58-2 and Rs. 55-12.

Reports were received during the earlier part of the week that opinion in U. S. A. was gaining strength against America's accepting silver in payment of war debts. America by herself produces a major part of the world's silver. Besides her stocks are also very large. In view of this fact it would not be advisable for the U.S.A. to accept silver in payment of war debts. The markets were already long bull and this news had an adverse effect in the market, local prices falling as low as Rs. 55-12.

There were strong rumours in the market that the Government of India were selling their silver in the U.S.A. markets through China and this also was a great disturbing factor in the market. Later however our Chinese buying there was a small recovery when the market rose to Rs. 57-8.

The news received from America this morning that an agreement between the representatives of the Economic Conference of U.S.A., Canada and Mexico, was reached on the question of rehabilitation of silver had a healthier effect on the market and the values were better over the previous day. Although no confirmation about the details of the agreement is available up to the time of writing it is believed that the terms agreed upon are:

(1) Call a halt on debasing silver coins.
(2) Substitution of silver for smaller currency.
(3) The return of silver to its natural firmness in coins, and
(4) the employment of silver in the reserves of central banks.

As reported previously, the American market is long bull and will carry on till the Economic Conference meets in June. But the developments by that time should be clear, definite and precise to keep the rise that has recently taken place. Failing which the liquidation which may then follow will have a very far-reaching effect on silver in particular and other markets in general.

The long position could be best judged by the fact that stocks of silver in New York are at highest levels ever reached, the estimated figure being between 750 to 100 million ounces. The recent rise in the U.S.A. price of silver due to the depreciation of dollar has been responsible for large quantities of silver being brought to New York from different centres, China and London both having about large quantities.

GOLD AND SILVER—

Values of Imports and Exports (Private)—

(i) During the week ending 13th May, 1933, and corresponding week af 1932 :—

London.—During the air mail week the market in London has again shown wide fluctuations. After the sudden fall of 2d. the market rose again on American buying. Later on however due to easier tendency of dollar America came out as seller and consequently the market was easy.

The stocks in Shanghai on the 29th ultimo consisted of about 149,100,000 ounces in sycee, 245,000,000 dollars and 8,460 silver bars as compared with about 163,900,000 ounces in sycee, 245,000,000 dollars and 8,820 silver bars on the 22nd ultimo.

Statistics for the month of April last are appended:—

	Bar Silver.		Bar Gold.
	Cash delivery.	Two months delivery.	per fine ounce.
Highest price ...	20.7/16d.	20.1/2d.	122s. 9d.
Lowest price ...	17.1/4d.	17.1/4d.	118s.
Average ...	18.440d.	18.494d.	120s. 7.70d.

HIDES AND LEATHER.

There was a definite activity noticed in the hides and skins market during the week under review. The prices were all along steady with an upward tendency. Shippers purchased larger quantities of dry salted cowhides. Arsenicated unframed qualities were also purchased on a larger scale and the prices were about 4 to 6 annas higher per 20 lbs. The goatskin market was very firm and prices advanced by 10 to 15 rupees per 100 skins. In all about 2½ lacs of goat skins of different varieties were purchased by the shippers during the week.

At Dacca also dry salted cowhides were purchased in larger quantities. And the prices were higher by about 6 annas per 20 lbs. The local tanneries were not very active as the leather market is very dull, the offtake at this time of the year being usually very poor. The Chinese tanners are still selling their products at extremely cheap rates. The average price of chrome tanned cowhides for shoe uppers is about 3 annas per sq. foot. The demand for bottom stock is also very unsatisfactory. The best quality Calcutta tanned sole leather hides are being sold at 8 annas per lb.

The latest quotations for hides and skins may be quoted as follows:—

	Rs. A.	Rs. A.	
(1) Dry Framed Agras ...	5 0	to 6 0	per 20 lb.

TEA AND COFFEE

TEA.

There was no sale of tea in Calcutta this week. But the recent reports about the restriction of tea exports from India had a very healthy effect on the market.

Restriction.—According to the reports received, the Government of India will shortly issue an official notification regulating the exports of tea from India.

Licences will be issued by a committee representative of the tea-growing industry and containing representatives both of British and Indian interests. The committee will operate from two centres—one in Calcutta for the Northern gardens, and one in Coimbatore for the South India estates.

The Government of India propose to bring in a Bill in the September session of the Assembly to restrict the extension of tea cultivation for five years.

The details to be published will indicate the manner in which it will be enforced. Broadly speaking, exports will be confined to licensed consignments only, and licences will be issued by a committee representing the tea-growing industry, and British and Indian interests. It will operate from Calcutta for Northern India gardens and from Coimbatore for South Indian estates. It will work under the orders of the Government of India and in accordance with the agreed scheme, so that exports would be restricted to a fixed percentage of the maximum from each producing country recorded in any of the three years of 1929, 1930, and 1931.

The rules explain the exact manner in which the system of licensed exports will operate so far as India is concerned. The slight delay in the publication of the rules has been due to the fact that official confirmation of Ceylon and Java Governments' action in this respect reached Simla only a few days ago. And it must be remembered that the Government of India does not deal with these Governments direct, but only through the Secretary of State for India. Since the receipt of the official confirmation, Simla has lost no time in fixing up the details of arrangement which will be put into operation shortly.

As for restriction in the cultivation of tea, this is a matter of minor importance to India as compared to export. But as there appears to be some sentiment in favour of legislation being undertaken in India on the part of Ceylon and Java, the Government of India will bring forward a Bill in the September session of the Assembly. The object of the legislation will be to restrict the extension of cultivation for a period of five years, which will form a necessary part of the whole plan of restrictive exports outlined above.

London.—At the London auctions on May 15, 32,300 packages of Indian tea were submitted for sale.

Demand for the offerings was good and the market was firm with the exception of some mediums. Common and low mediums were 1s. 4d. per lb. higher, while the best sorts sold well.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 7¾d., to-day's auction 7¾d. per lb.; Common Broken Pekoe last auction 7¾d., to-day's auction 7¾d. per lb.; Common Orange Pekoe last auction 8d., to-day's auction 8d. per lb.; Common Broken Orange Pekoe last auction 7¾d., to-day's auction 8d. per lb.; Common Broken Pekoe Souchong last auction 7¾d., to-day's auction 8d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 7¾d., to-day's auction 7¾d. per lb.; Clean Common Broken Pekoe last auction 8d., to-day's auction 8¼d. per lb.; Clean Common Orange Pekoe last auction 8d., to-day's auction 8¼d. per lb.; Clean Common Broken Orange Pekoe last auction 8¼d. to-day's auction 8¼d. per lb.; Clean Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. per lb.

Tea Imports.

London, May 15.

Imports of tea of all kinds into the United Kingdom, during the month of April, 1933, compared with the previous month and with April, 1932, were as follow:—

	April, 1932. lb.	March, 1933. lb.	April, 1933. lb.
From British East Indies (except Ceylon) ...	3,991,000	14,813,000	6,854,000
From Ceylon ...	14,733,000	13,890,000	21,752,000
From China (including Hongkong and Macao)	24,000	101,000	133,000
From other countries ...	7,578,000	5,417,000	10,109,000

At the London auction on May 16, 26,200 packages of Ceylon tea were submitted for sale.

There was an active demand at generally firm rates. Common qualities were a farthing per lb., and medium and good qualities were dearer.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 7¾d., to-day's auction 7¾d. per lb.; Common Broken Pekoe last auction 8d., to-day's auction 8¼d., per lb.; Common Orange Pekoe last auction 7¾d., to-day's auction 7¾d., per lb.; Common Broken Orange Pekoe last auction 8d., to-day's auction 8¼d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 8d., to-day's auction 8⅛d. per lb.; Clean Common Broken Pekoe last auction 8¼d. to-day's auction 8⅜d. per lb.; Clean Common Orange Pekoe last auction 7⅞d., to-day's auction 8d. per lb.; Clean Common Broken Orange Pekoe last auction 8⅜d., to-day's auction 8⅜d. lb.

Arrivals & Exports of Tea.

	1933.	1932.
Exports by sea—		
From Calcutta	727	372
,, Chittagong	115	640

COFFEE.

There has not been any change in the Indian markets, the undertone being quite healthy. There has been little better export enquiry at best price. In London the market was a shade easier. New York Rio 7 was quoted at 8¼ Cents per lb., against 7⅞ Cents per lb., a week ago.

Stocks in London market are:

	Bags. 1933.	1932.

Loans, Overdrafts and Cash Credits.

The Bank grants accommodation on terms to be arranged against approved securities.

C. E. RANDLE,
General Manager.

SUGAR

SUGAR.

During the week under review, the sugar market in Calcutta has ruled steady with a small advance in values. As reported in these columns, the stock of Indian sugar is diminishing day after day. The sugar-producing season in India has almost come to an end and consequently the sales, ready as well as forward, are very poor. Stocks for Indian and Java sugars are low with the result that the slightest demand causes the prices to go up. World marktts during the period have all ruled very steady, partly due to the improved tone of the commodity markets in general, and partly due to the probability of curtailed production during the coming seasons. In India the rise witnessed in the course of the past week is also due to the fact that the local prices are below the import parity and the unfavourable exchange for Java has made it impossible for sellers on the other end to reduce their values further and to catch Indian business.

The quotations at the time of writing are:

White Java Ready ...	...	Rs. 10 4 0
White Java Forward ...	...	,, 10 3 6
Cawnpore Ready ...	...	,, 10 1 0

The Stocks at the main Indian ports are:

	1933.	1932.
Calcutta	42,660	48,000
Bombay	100,500	130,000
Karachi	81,000	165,000
Madras	15,000	28,000
Rangoon	18,420	20,420

(*a*) *Despatches*—

Kapok.—Double ginned machined cleaned seedless at md. loose ex-godown.

LINSEED.

The market during the period under review has ruled steadier with a further advance in values. The position of the Indian linseed is all the more optimistic due to its price in London being below the import parity of Argentine seed in U. K. markets. The quotations for Indian seed are, no doubt, higher in the Liverpool market than those of the Plate seed. But it is to be remembered that the latter is subject to 10 per cent. import duty in U. K. Besides Indian seed yields 4 per cent. more oil than the Argentine seed and is also sold without any refraction. This nominal quotations for Plate seed being lower in U. K. they actually turn out higher than the Indian tea. This is all the more a reason for Indian seed rising still further in India. In general the position of linseed is quite satisfactory. The Argentine crop is 1.6 million tons against 2.4 million tons last season. While the Indian crop and those in other parts of the world is the same as during the previous years. The demand for linseed out is not in the least discouraging, consequently the future of the seed is quite bright.

The quotations are:

Ready seed ...	...	Rs. 4 4 6
September Beta ...	...	,, 4 9 6

WHEAT.

The market in Calcutta during the week under review has ruled steady with a small advance in values. The upcountry markets have exercised great reserve in selling, in anticipation of higher prices. Demand for flour is also improving. There has been a rise in grain values chiefly in America and also in other parts of the world. This has had a sympathetic effect on Indian wheat and the prospects in the immediate future are bright.

Foreign.

There has been a further substantial rise in the American market, values going up again by 3 or 4 per cent. The visible supply of wheat in Canada, though larger than the last year, is being absorbed by a fair offtake each week, and forms a healthy sign by itself. The latest report that a reduction of 10 per cent. in the acreage of wheat is being considered, is a bull factor and the market is firm on this news.

Crop.

According to a cable, dated 10th May, 1933, received from the United States' Department of Agriculture, Washington, the production of the winter wheat crop of the United States of America for the current season is now estimated at 337,485,000 bushels (9,040,000 tons), as against 440,781,000 bushels (11,807,000 tons), the corresponding estimate of last year. The condition of the crop is estimated at 66.7 per cent. of the normal, as compared with 75.1 per cent. at the corresponding date last year. The area for harvest, after an abandonment of 32.2 per cent. of the area sown, is reported to be 27,096,000 acres, as against 32,277,000 acres this time last year.

WHEAT.

From our Correspondent.

(*By Wire.*)

Karachi, May 18.

The wheat market is strong on unfavourable weather reports and higher advices from Punjab. While/Ready is quoted Rs. 25/12 per candy of 8 Bengal maunds which is 1/12 above last week's rate. Yesterday business was done at 26/12.

SHELLAC.

The shellac market in Calcutta during the week under review has ruled steadier without any appreciable change in values. There are more buyers in evidence sellers being fully reserved. The steadier tone is due to the better sentiment in all the commodity markets.

The quotations are:

	T. N. Shellac. May Dely.	July Dely.
Friday the 12th May, 1933 ...	22 8	23 10
Saturday the 13th May, 1933 ...	22 10	23 10
Monday the 15th May, 1933 ...	22 4 easier	23 4 quiet
Tuesday the 16th May, 1933 ...	21 14	22 14
Wednesday the 17th May, 1933...	22 12 firm	23 12 firms
Thursday the 18th May, 1933...	23 0	23 2 buyer

Rates for weekly margin payment amount on Saturday the 13th May Rs. 22-8 and 23-8.

FLOUR.

As compared with the previous week the market is little bit easy due to moderate offtake. But due to a healthy wheat market the position is quite strong.

The latest quotations are:

	Rs. A.	Rs. A.
Patent Flour	5 10	to 5 12
Superfine Flour	5 6	to 5 8
Household Flour	5 0	to 5 2
Soojee	5 6	to 5 8
Atta B.	5 2	to 5 4
Atta 2	4 10	to 5 12
Atta S.	4 9	to 4 11
Atta K.	4 0	to 4 2
Atta 3	3 6	to 3 8
Pollard	2 13	to 2 14
Bran	2 12	to 2 13

COAL.

There has been a slightly better enquiry. The general tone of the market is, however, easy. The prices remain more or less unchanged. They are:

The prices are nominally as follows:—

	Rs. A.
Victoria	4 0 per ton.
Desherghur & Poniati ...	3 12 per ton.
Other Raniganj	2 4 to 2 12 per ton.
Super Selected Jherrias ...	3 12 per ton.
Selected Jherrias	3 8 per ton.
Other Jherriah	2 4 to 3 0 per ton.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INYESTMENT.

GILTEDGE MYSTERIES.

The last twenty days have witnessed universal chagrin, disappointment and indignation in the giltedge market—chagrin at the colossal losses inflicted on investors, disappointment that carefully-made plans have gone away, and indignation that the Government have, thus, behaved in a thoughtless and wanton manner. The list for the New Rupee Loan opened on April 28 ; we knew by one o'clock that the list was closed; we learnt at three that there would be full allotment. Writing our Editorial immediately thereafter, we could see that the imposing structure of buoyant giltedge, which *Indian Finance* had helped to build, was tumbling down. We said so in our issue of April 29. While the market was in this state of disruption, as though one folly was not enough, the announcement as regards the 4 per cent. sterling loan was made. This led to a more serious landslide. An interregnum of slight recovery supervened. But the gathering volume of waning confidence of investors ; the growing deliberation of weak bulls ; the aggressive tactics of success—intoxicated bears ; the sombre clouds that overhung the Disarmament Conference ; the heroics of Herr Hitler ; the apathy of the London operators towards giltedge as a corollary to a slight revival of interest in equity shares of industrials—all this combined to knock the bottom out of the giltedge market in India. At one stage, 3½ per cent. Paper rushed headlong to as low as Rs. 77/8 ; and 3½ per cent. New Loan was unsaleable at Rs. 7 or Rs. 8 discount below issue price. The Bombay Stock Exchange, on the manifestation of such a serious panic, took a prompt and wise step of suspending all forward transactions in giltedge. For settlement purposes, the prices of 3½ per cent. Paper and 4 per cent. 1960-70 Loan were fixed at Rs. 80 and Rs. 91/8 respectively.

* * *

This step was taken last Monday. But for the timely intervention of the authorities of the Bombay Stock Exchange, the debacle in the giltedge situation would have reached proportions beyond the limits of recovery. Mr. K. R. P. Shroff, the President, and his colleagues are entitled to the warmest thanks for their firm and courageous action at the proper psychological moment. It is to them that the entire credit is due for arresting the "rot" and for ushering in the forces that have helped to create healthier conditions in the giltedge market in the following days. Now, as the market was recovering from the blow, it was upto the Government to lend succour in the later stages, if not at the critical stage. But, as our Bombay correspondent says in a message appearing elsewhere in this issue, such support as the authorities have given has been too timid to hearten the bulls or to rout the bears. If the folly of the Government in precipitating the crisis is grave, their callousness to those afflicted by the crisis is graver. This episode is calculated to make investors twice shy and publicists like us a hundredfold shy. The next time we have to "boost" a New Loan, caution will be our watchword.

* * *

Frankly, the more we contemplate over the events of these three weeks, the more mystified do we feel. It cannot be that the Government were not aware of the technical position of the market on the eve of the loan; if they were aware of this—they cannot plead ignorance because, for two or three weeks prior to that event, *Indian Finance* had been discussing this matter at great length—any tyro in high finance could have known that giving full allotment to cash applications would aggravate the unsoundness of the giltedge technical position. Either it is a case of ignorance of the relevant facts of the giltedge market or of most faulty judgment in the appreciation of the psychological factors connected with the market's response to loans. Having been ignorant as regards the first factor and having erred in judgment as regards the second, the Government could at least have shown courage and imagination in subsequent days by free and large purchases of securities from the market, by reduction of bank rate, and by other measures calculated to assure the public of the full faith of the Treasury in the new borrowing rate established by the 3½ per cent. 1947-50 loan. No effective measures in these directions were taken. The first chapter would, thus, show lack of knowledge or of judgment or of courage or of imagination on the part of the Finance Member and his lieutenants.

* * *

Let us now turn to the second chapter, namely, the sterling loan. Our Simla Correspondent has raised a very interesting issue in connection with this flotation. At the time when the 3½ per cent. Rupee Loan was placed on the market, was Sir George Schuster aware or not of the impending 4 per cent. sterling loan? If he knew that a 4 per cent. sterling loan was being planned by the India Office on the advice of the Bank of England, he should, in the first instance, have objected to a sterling loan at all at a time when the balances with the Secretary of State were ample for all ordinary and extraordinary requirements; if his objection in this regard was over-ruled, he should, in the second instance, have protested against a 4 per cent. issue and the offer of an yield nearly one per cent. higher than what other borrowers, with a far less satisfactory financial position than that of India, had been asked to pay. If, even in this regard, his protests were of no avail, he should, in the third instance, have postponed his own 3½ per cent. Rupee Loan to a date later than the flotation of the sterling loan in London. In any case, there can be no excuse for this exhibition of sorry and unsound finance, as no financial expert, zealous of his reputation, would have allowed himself to be a party to a 4 per cent. loan immediately following a 3½ per cent. loan. There was no particular hurry for the 3½ per cent. Rupee Loan. It could have been held over for a month. If the hukum of the Secretary of State and the whim of the Rt. Hon'ble Montagu Norman was that a 4 per cent. loan in London must be floated at any cost, why not let the loan be floated and be done with. Such setback as would be caused by a 4 per cent. loan would have occurred but the reaction thereafter would have been easier. If, after this business was finished, the Finance Member had set about for the preparation of the 3½ per cent. Rupee Loan, he would, by that very act, have created forces which would have led to the consolidation of the giltedge situation after the blow of a 4 per cent. sterling loan. Moreover, this would have afforded a breathing space for the overbought operators in giltedge market in India to adjust their position. A 4 per cent. sterling loan early in May and a 3½ per cent. Rupee loan late in May would have meant a natural and proper sequence of events, and would have been in best accord with the technical position, as it obtained in the latter half of April, in the Indian giltedge market.

In the above arguments, we have assumed that the Finance Member might have known of the 4 per cent. sterling loan at the time when he launched his 3½ per cent. Rupee Loan. The other alternative is equally likely. It is quite possible that the idea of the sterling loan was jumped on him as precipitately as had been the case on former occasions with regard to India Office loan proposals. Let us assume, for argument's sake, that Sir George Schuster came to know of the Secretary of State's intentions only a few days after the Rupee Loan had been announced. It was Sir George Schuster's duty to point out, in the most emphatic terms, the absurdity of the proposal and the entire unsuitability of the moment chosen. He should have made it very clear to the Autocrat at Home that Sir George, who has to deal with the Indian capital market, would cut a sorry figure if an absurd proposal like the one put forward by the India Office were carried out. For one thing, the Indian public would lose confidence in the credit policy of the Government, for which it is the Finance Member that carries the largest measure of responsibility. For another thing, the reputation of a Finance Member is far more important than the whim of the financial advisers of the Secretary of State. Sir George should not have minced words in urging this point of view.

* * *

After all this havoc had been wrought, with 3½ per cent. still six to seven points below the high watermark touched on the eve of the Rupee Loan and with the New Rupee Loan itself still three and a half points below the issue price, we, for our part, are, however, satisfied that the fundamentals of the analysis of Government finance, which we furnished in these columns for the period up to 1935-36, remain unaffected. Assuming that no further follies on the part of the Finance Department are likely, and that no bolts from the blue will fall on the giltedge market, we do not see how the era of a bright and cheerful giltedge market in the not too distant future can be prevented. An era of this kind was to have been inaugurated by the 3½ per cent. 1947-50 loan. Subsequent events have delayed, but not killed, it. We believe that a most powerful bullish influence will come into active play with the return of the funds in respect of the loans to be redeemed in the course of this year. On May 15, Rs. 4.18 crores of he 5 per cent. 1929-47 loan was discharged. On July 1, 4 per cent. 1931-36 will account for the release of Rs. 4.17 crores; August 15 will see an inflow of Rs. 8.9 crores from 1933-36 bonds; and this process reaches its culmination on September 1, when the repayment of 1933 bonds will mean an expansion in market resources by Rs. 4.25 crores. The total amounts involved in these four loans, repaid or to be repaid before September 1, would, thus, come to Rs. 20.69 crores. It is reasonable to assume that at least half of these amounts will find its way back to giltedge securities. There is, therefore, nearly Rs. 11 crores that must perforce be invested in giltedge securities in the next half year. This is in addition to the accumulations of investment funds in the case of insurance companies and like institutions. We do not see any reason why large-scale investments of this size in giltedge should have any other influence than that of causing a substantial improvement in giltedge prices.

* * *

Due to this important factor, rupee securities must show a steady appreciation from their present levels; and by the latter half of August, the levels of the latter half of April may well be reached. If this materialises, it is not unlikely that the Government would again come on the market with a conversion plan for the outstanding balances of the loans maturing in 1934-35 and 1935-36. The measure of success of such a conversion programme would depend upon the degree and extent of reviving confidence in the credit policy and the *bonafides* of the Government. In any case, the unconverted portion of the loans in question could not be more than Rs. 30 crores. This is a comparatively trifling amount to be dealt with in a three-year period.

* * *

As we have often emphasised, there should be no need for any cash loan. It is true that signs of expanding activity in Railway capital programme are visible. The through route to Karachi may be taken up on hand in the next financial year. But the whole scheme would cost only about Rs. 5 crores; and this would be spent in the course of three years. The annual requirement on this project would be about Rs. 1½ crores. It is also true that agents of all Railways are straining their brains to find out ways and means of spending more money on capital projects. From this standpoint, repairs and replacements of wagons, vehicles and locomotives would loom large in the picture. Incidentally, the Standard Wagon Company would enjoy a thriving business in the next two or three years. But, so far as the effect of the Railway capital programme on the new loan plans of the Central Government is concerned, the utmost expenditure on all likely projects cannot be more than the excess of the receipts of railway depreciation fund over the withdrawals *plus* the accruals in the various funds, postal cash certificates and savings bank deposits. We do not, therefore, see any reason to change our view as regards the unlikelihood of a cash loan up to 1935-36. As we have stated above, the conversion programme would also be of the slenderest description. In the light of this fact, we still adhere to the view that Government finances will continue sound and giltedge will be refashioned into health unless there are unexpected shocks administered by the authorities themselves.

The Empire of India is in the front rank of Indian life offices and is one of the two whose funds exceed the four-crore mark. Judged by every criteria by which a sound insurance company should be assessed, the Empire would pass the severest and most critical examination of its financial position and organisation. Their investment policy is conservative, found to be the wisest by the experience of most big companies; eighty per cent. of their securities are in terminable government securities repayable at par. In the race for fresh business, the Empire of India follows a cautious policy, and the selection of lives is made on the most stringent basis. In the presentation of their annual statements to their shareholders, no effort is spared to make the particulars easily understandable to even the layman. Established in 1897, the Company is steadily adding to its record of progress year after year. The ratio of expenses to premium is the lowest among Indian Insurance Companies.

* * *

The statement of accounts for the year ended December 31, 1932, shows that the number of proposals received records an increase of 875, the total sums proposed being nearly Rs. 150 lakhs as against Rs. 140 lakhs in 1931. 6,157 policies assuring Rs. 1,11.6 lakhs were issued in 1932 as against 6,001 policies assuring Rs. 105.3 lakhs in 1931, showing an increase of about Rs. 6.3 lakhs in new business. The annual premium income is Rs. 49 lakhs. Claims

by death during the year show a decrease of Rs. 31 thousand, while the amount of endowment assurances matured during the year was Rs. 25 lakhs, an increase of nearly Rs. 4 lakhs on 1931. These figures show the improved mortality experience of the Company. The expenses of management have been further reduced by 0.1 per cent. to 21 per cent., which shows the vigilance with which all waste and extravagance is avoided by the Company. The increase of the Life Fund is Rs. 19.9 lakhs, and the Reserve Fund Rs. 17.2 lakhs. The total assets at Rs. 418.3 lakhs show an increase of Rs. 20.8 lakhs.

* * *

The financial position of the Company is irreproachable. About 80 per cent. of the stock exchange securities are terminable loans payable at par on maturity. Last year, the Company provided an Investment Reserve of over Rs. 28 lakhs as a reserve against the fall in the values of securities. This reserve has not been written back. Without taking into consideration this reserve, the book value of investments is substantially less than their present market value. In a study of the Empire of India, it is always necessary to pay a tribute to the conservatism of Allum Barucha and Company, the agents and secretaries, and to the enterprise of D. M. Das and Sons Ltd., the Chief Agents for Bengal, etc., of which the life and soul is Mr. A. C. Sen.

PERSIAN OIL SETTLEMENT.

In our comments on the dispute between the Persian Government and the Anglo-Persian Oil Company, we urged consistently that the company would be ill-advised to take an unconciliatory stand on its legal rights and that its real interests lay in having the whole dispute settled on broad principles of equity. The attitude of the British Government in the early stages of the dispute did not encourage the hope of an amicable settlement. Nor was the reference to the League of Nations calculated to allay the disquiet that was felt in this regard. For there was little reason to think that the League would go against the interests of a great Power like Britain, especially as the strictly legal rights were on its side. But considering the agreement that was signed on April 28 by the Persian Government and Sir John Cadman on behalf of the Anglo-Persian Oil Company, it seems that Dr. Benes, the *rapporteur* appointed by the Council of the League, had regarded his task in precisely the same spirit which should actuate all the dealings of the League. His influence has been exerted towards the same ends as were indicated by us in our comments on this question. The Persian Government's discontent with the old understanding arises chiefly from the instability of the royalty payments, which form a large element in Persia's national budget, the unlimited extension of the company's operations, the denial to the nationals of a foothold in the service of the company and the leakage of legitimate dues to the Persian Government through the intricate organisations through which the company carried out the sale of its products. That all these points have been fairly met in the new agreement will be seen from the following summary of the terms appearing in the *Economist* of May 6, 1933:

(1) The area of the concession will be half the previous area until 1938, after which date the area will be 100,000 square miles.

(2) The company loses its exclusive right for pipe-lines from May 1st.

(3) The company will pay 4s. a ton on oil sold in Persia or exported.

(4) In addition 20 per cent. of the net profits of the company, whether made in Persia or abroad, will be paid to the Persian Government after the payment of £671,000 to shareholders.

(5) Arrangements will be made for safeguarding the Persian Government in case of further depreciation of the pound sterling.

(6) If from its general reserve the company gives anything to its shareholders the Persian Government will receive 20 per cent. as well.

(7) On the expiry of the concession or its surrender by the company, 20 per cent. of the reserve accumulated from the present date goes to the Persian Government.

(8) The company will pay in taxation to Persia during the first fifteen years £225,000, during the second fifteen years £300,000, and afterwards an amount to be agreed on.

(9) The company will replace progressively its foreign employees by Persians, and spend £10,000 yearly in educating Persian in Great Britain.

(10) The period of the concession is sixty years.

(11) The company cannot transfer the concession to another party without the consent of the Persian Government.

(12) On the expiry of the concession certain classes of the company's property in Persia revert to the Persian Government, and during the ten years preceding the expiry the company cannot sell or export such property from Persia.

(13) Regarding the sale of oil in Persia: The Gulf of Mexico or Roumanian price, whichever is lower, is to be taken as the basic price, and oil is to be sold to the public from the refinery at 10 per cent. less than this price, and to the Persian Government at 25 per cent. less.

(14) All differences will be referred to arbitration.

* * *

An agreement like the one outlined above necessarily causes great dissatisfaction amongst circles which are not only intent on making a business profit but also humiliating foreign nations in the bargain. But that the terms are not considered very extravagant by the investor may be seen from the fact that the market marked down the shares by only a moderate amount. The *Financial News* has put the crux of the whole change when it says that the "essence of the new agreement is that it converts the Persian Government's stake in the concern from a deferred equity interest into a prior charge with participating rights." Where the Persian Government was entitled formerly only to 16 per cent. of net trading profits, it will in future have 4s. per ton of all oil produced by the Company, *plus* 20 per cent. of net profits distributed or placed to reserve after the ordinary shares have received 5 per cent. The gain of the Persian Government as a result of this change is that it will receive a regular royalty revenue. It is not necessarily a larger royalty revenue. In a normal year like 1929 when production was 5.4 million tons, the royalty under the new basis would amount to £1,092,000 against an actual payment of £1,341,000. It is only when oil prices are very low that the Company would find the agreement markedly adverse to its interests. For the Government would be entitled to 4s. per ton irrespective of the price which the oil fetches. In 1930, the actual royalty paid was 806,000 but if the present agreement had been concluded before that time, the Company would have been liable to pay £1,150,000. But the risk of losing in a year like 1930 should be deemed unavoidable in such a large-scale enterprise as that of the Anglo-Persian Oil Co. The provision in regard to the minimum royalty of £750,000 had little practical value as the production of 3,750,000 tons a year, which it implies, is a level which the company would not touch except when the mines are nearing the stage of exhaustion.

THE HESSIAN MARKET.

(From Our Commercial Correspondent.)

Calcutta, May 19.

The Hessian market during the week under review was very firm and prices for all descriptions

have registered sharp advances of more than a rupee. There has been good demand from North America and Argentine.

* * *

I give below a table showing the stocks of Hessian in Calcutta at the end of each month last year. It will be seen therefrom that from the beginning of May to the end of October there was a reduction of about 8 crores of yards in the stock of hessian. As against a stock of 17 crore yards at the end of April, 1932, the stock at the end of April this year is only eight crores of yards. This means that if the shipments of hessian to foreign countries during the coming six months do not show any falling off as compared to last year by the end of October, there will be practically no stock left in Calcutta. The jute mills in Calcutta are bound to a schedule of production in which they cannot make a change up to the end of June, 1934.

* * *

Statistically, the position therefore seems to be absolutely sound and the price of hessian ought to go up considerably.

* * *

Advices from New York point to a substantial rise in commodity prices there. This has created a feeling of great enthusiasm. Whether it will result in improved business or not is a matter on which it is difficult to pronounce any opinion. But one thing seems certain and that is, business conditions in U.S.A. during the year 1933 will not be worse than what they were in the year 1932. The total quantity of hessian shipped to North America during the year 1932 was nearly 61½ crores yards or an average of slightly over five crore yards a month. The shipments to North America during the first four months of this year do not show any decline as compared to last year. Recently a fairly large business has been done with North American buyers. It seems, therefore, that so far as North America is concerned there is no possibility whatsoever of any decline in shipments. On the contrary, I believe that as a result of the improved economic outlook there is every possibility of a better offtake of hessian by North America. The New York Agent of a prominent shipper recently cabled to Calcutta saying that the burlap trade in New York expects an increase in consumption of nearly 25 per cent. from July onwards.

As regards the South, I have made enquiries from several shippers and was informed that no agent of the Calcutta shippers expects that country to take less hessian than what it took in the year 1932. The total shipments of hessian to South America during the year 1932 was about 22 crores of yards. It is also reported that the stock in the hands of the River Plate buyers in the beginning of the present year was much less than in the beginning of last year. During the first four months of this year the Plate has taken about four crore yards more than last year. From the reports received so far there does not seem to be any possibility of the Plate buying less than last year.

* * *

Shipments of hessian to all other parts of the world except to North America and South America during the first three months of this year were 3.76 crores of yards as against 3.71 crores of yards during the same period last year. The shipment of hessian bags to all parts of the world show considerable improvement. During the months January to March the total amount of hessian used in the manufacture of hessian bags was 3.84 crore yards as against 2.96 crore yards used in the first three months of last year.

* * *

In opposition to what I have said here before, it is argued by some, that owing to the fact that the present price of jute is very low and there is a very good margin of profit for the jute mills the continental and Dundee Mills by underselling, will be able to capture some portion of the market supplied by Calcutta. This is a question which requires very careful consideration I sent a cable to New York to enquire from them as to whether the Continental and Dundee mills had been making any large sales in the New York market. I have received a reply that such was not the case, and that the business done so far was the usual one. As regards South America a prominent shipper sent a cable to his agent asking him to make enquiries as to the amount of business done so far by the Continental mills. A reply has been received saying that the total business done so far is only about 6,000 bales. The agent of another shipper estimates it to be about 10,000 bales. This does not show any unusual activity on the part of the Continental mills.

* * *

It will be seen from what I have said above that there is bound to be a great scarcity of ready goods during the next six months. We have also to bear in mind that recently there has been a fairly good improvement in the price of all commodities and this better outlook about world trade cannot but result in better demand for hessians. I therefore believe that the price of hessian is bound to go up considerably and that purchases of hessians in all, weak markets will prove profitable.

* * *

The following table shows the stocks of Hessians in Calcutta at the dates mentioned:—

			Hessian	Sacking
End of December,	1931	...	13.57	5.36
,, January,	1932	...	14.19	5.36
,, February,	,,	...	14.43	4.53
,, March	,,	...	15.33	6.59
,, April,	,,	...	17.00	6.85
,, May,	,,	...	16.14	8.85
,, June,	,,	...	16.16	11.16
,, July,	,,	...	15.14	12.26
,, August,	,,	...	12.72	12.34
,, September,	,,	...	11.26	8.26
,, October,	,,	...	9.15	7.20
,, November,	,,	...	8.85	6.29
,, December,	,,	...	8.82	7.14
,, January,	1933	...	9.38	8.33
,, February,	,,	...	9.09	9.40
,, March,	,,	...	8.95	10.52
,, April,	1933	...	8.2	

The Shipments of Hessian in the three months January to March, 1933 as compared with the same period in 1932 were:—

		1933	1932
North America	...	14.61	14.42
South America	...	4.05	1.61
Rest of the World	...	3.76	3.71
Used in Hessian Bags		3.84	2.96
Total crores of yards	...	26.28	22.72

Shipment of Hessian Cloth in 1932.

	North America. Yds.	South America. Yds.
January ...	3.73.88.700	61.52.500
February ...	5.33.79.842	70.09.000
March ...	5.34.80.500	29.60.000
April ...	5.55.18.000	31.11.661
May ...	5.07.91.294	69.67.000
June ...	5.66.05.103	1.71.82.500
July ...	3.11.14.629	3.18.64.788
August ...	5.81.24.945	3.48.36.000
September ...	6.92.57.000	3.26.41.000
October ...	3.27.19.372	4.38.66.100
November ...	5.69.53.872	2.08.32.000
December ...	5.98.91.350	1.28.99.500
	61.52.24.607	22.03.22.049

THE ALLAHABAD BANK, LTD.

The statement of accounts of the Allahabad Bank, Ltd., for the year ending 31st March, 1933 shows that the profit for the year was Rs. 5,74,595-11-2, which is greater than that of the previous year by nearly 20 thousands. This amount, together with the Rs. 3,69,306-7-0 brought forward from the previous year, made a sum of Rs. 9,43,902-2-2 available for distribution. From this the Directors have declared the preference dividend of 6 per cent., and have maintained the rate of dividend to the Ordinary shareholders at 15 per cent., and the bonus to them at the rate of 6 per cent. per annum, free of income-tax. These absorbed Rs. 4,59,000. The amount carried to next year is Rs. 4,84,902-2-2 which which is more than the amount brought forward by nearly 1.16 lakhs. There has been no allocation to the reserve fund this year. Last year the Directors transferred Rs. 12.5 lakhs from the general reserve to a special reserve No. 2, as a provision against depreciation of gilt-edge investments. As these securities have gone up considerably in value, this provision is no longer necessary. The directors have therefore transferred it back to the general reserve, raising it to its original amount of Rs. 44.5 lakhs. The general reserve is quite substantial, and is more than the paid-up capital by Rs. 10 lakhs, while Fixed and other deposits have decleased by 46.52 lakhs. The cash holding is also more by 51.92 lakhs. Loans, Bills discounted etc, have fallen by 21.08 lakhs, while cash credits and overdrafts are up by 61.46 lakhs. These figures show that both the bank and its customers have been trying to maintain a more liquid position. The percentage of Capital and reserves to total deposits is 8.2 per cent. against 8 per cent. last year, and the 10 lakhs. Current deposits have increased by Rs. percentage of total liquid assets to total deposits is 72.0 per cent. against 66.7 per cent. last year. The financial position thus revealed is very sound.

CONCEITED CHRONICLE.

Eavesdropper writes:

The following is from the *Bombay Chronicle*:

'Sir Rajendra's autocracy in business affairs, his iron rule over the family, his rough and abrupt decisions, his impatience—all these traits proceed from sublime self-confidence, which combines with generosity of heart etc.

This is from the life sketch of a Calcutta iron master, by one of his admirers. Looks as Bengal's got a Hitler ready for the emergency when it comes.

It's not easy to find virtues where there are none, so traits for which ordinary men might have been damned for ever are used for the glorification of the rich and the mighty. And some make a good business out of it.

Brick by brick, he has built up countless buildings which are things of beauty and joy. Brick by brick he has built up his own career, which is in a not less degree, a thing of beauty and joy, says the writer in *Indian Finance*.

Brick by brick, also is *Indian Finance* being built up. Thus is history made and even written—for a consideration.

I happen to know quite a deal of the history of the *Bombay Chronicle* and of some of its contemporaries. They, at any rate, cannot throw the first stone at any fellow-journal for alleged receipt of "consideration." Mr. B. G. Horniman was connected with the *Indian National Herald*. He has often stepped in, and often stepped out from, the *Bombay Chronicle* in his and its career of vicissitudes. He can speak with authority on journals thriving on consideration. Let the scribes on the *Chronicle* consult him before they write next on this topic. What time the ex-Maharaja of Nabha was being coaxed to drop his sovereigns down the bottomless pit of the *Herald*, the authorities of the *Chronicle* were waiting on the Maharaja of Patiala, inducing him to do the like trick. Despite "consideration" on quite a giant ecale, neither the *Herald* nor the *Chronicle* could build itself up, brick by brick. All the time, they did all that was possible to tear themselves down, brick by brick. The empty conceit of the *Chronicle* requires from me no more remark than the glad affirmation that *Indian Finance* is proud to have built up its present position, brick by brick, without any "consideration" received from prince or beggar; and that the "Calcutta iron master" is far more worthy of a journal's notice than princes, deposed or otherwise.

THE INVESTORS INDIA YEAR BOOK 1932-33.

(Twentieth Edition)

JUST PUBLISHED

Contains condensed **Balance Sheets**, and full particulars of the Capital Structure and working of **practically all important companies operating in India. Figures from latest available Balance Sheets are included.**

Also complete details of loans issued by

Government of India
Provinces
Municipalities
Port Trusts
Improvement Trusts.

Carefully tabulated statements are included dealing with Tea shares (Northern India Rupee and Sterling Companies).

Straits Dollar Rubber Shares.
Straits Tin Mining shares.

Indian Finance (13-5-33) writes "... we use it only less frequently than the dictionary ... the most reliable and the most complete book of reference for investors ..."

SIR GEORGE SCHUSTER

STORY OF A BAD INHERITANCE

Amongst India's Finance Ministers, Sir George Schuster has more affinity with Sir Malcolm Hailey, one of his predecessors, than with Sir Basil Blackett, his immediate predecessor. Sir George and Sir Malcolm have both a *debonair* grace, a courtly affability, a parliamentary *chic,* an apt resourcefulness in debate, a downright horse-sense in discussion, and a compelling persuasiveness in exposition.

Sir Malcolm's period of stewardship of India's finances was a mere stage in his pre-destined ascent to a Governorship. Sir George's *role* as a Finance Member would appear, however, to be an effective block in the way to a provincial *gadi,* which he would have filled with distinction and dignity.

Sir Basil as custodian of finance was decidedly —though, I think, undeservedly—unpopular ; but he was universally acknowledged as the ablest Finance Minister with the most outstanding and versatile talents. Had he, however, been a Provincial Satrap, the attribute of unpopularity would have remained, and the tribute to worth would never have been paid. He had not the *flair* for a political "job."

Sir George in his four-year regime has been far less unpopular though (perhaps, because) he is far less of a real financial expert. But as Governor, the very last vestige of such little unpopularity as is now inevitable would disappear. Installed as the Head and Chief of a province, he would be a round peg in a round hole.

He should be most at home in offices where one has to make pronouncements, cultivate poses and be altogether and all the time gracious. Lady Schuster would be a most gracious "Her Excellency" to a most worthy "His Excellency."

It were a thousand pities that precedent and prejudice should prevent so fruitful a culmination. Sir John Anderson's appointment to Bengal was a breakaway from convention in the sense that he was the first Governor to be selected from the British Civil Service. This experiment has every promise of proving a signal success. Why should there be any objection to Sir George Schuster being the first Governor of one of the three Presidencies to rise from the Viceroy's Executive Council?

The strong point of Sir George is an attractive, handsome, impressive personality ; suave manners which, at once, combine reserve and charm ; a clear and crisp understanding of most matters that matter and most men that count ; a capacity to deal with all so as to impress them with his friendliness and their importance ; and a no less notable capacity to expound all matters in a way that sheds just that light which suits laymen.

Sir George as a man, politician, diplomat, speaker, debater and host has, ever, engaged my admiration and regard. With Sir George Schuster, the Finance Member, I have, however, had fundamental differences.

In this connection, I must own, at the outset, that I was so keen on an extension to Sir Basil Blackett's term of office that I was not keen on his successor. To succeed a Finance Member of the expertness, versatality and skill of Sir Basil was itself an initial handicap to Sir George. At the same time, the latter inherited, from his predecessor, a state of affairs, in which disruption had set in, at an accelerating pace, owing to the ill-fated eighteenpence ratio and the deflationary measures it entailed.

Sir Basil was himself no believer in a high exchange value for the rupee. The Secretary of State was for 1s. 8d. The utmost that Sir Basil could do was to persuade the autocrat at home to come down to 1s. 6d. The author of the eighteenpence ratio is held up to criticism and scorn by the sixteenpencers for "forcing an unnatural ratio on the country." A measure of gratitude is due, I urge, that he prevented the still more unnatural ratio of twentypence.

Be this as it may, the disaster that overtook India's economy since 1927 had its root and origin in the egregious recommendation of the Hilton-Young Commission and its adoption by the Government of India. Sir Basil raised the wind ; Sir George had to reap the whirlwind.

Sir Basil had a spell of more or less unbroken for the main reason that, in the earlier half of his term, the exchange value of the rupee was at lower levels. Sir George has had to contend with crisis after crisis, because he had all the time to contend against the evil effects of an over-appreciated rupee.

It was Sir George's misfortune that his heritage was so "rotten." He is entitled to the fullest measure of appreciation in his fight against heavy odds.

But, did he show pluck, dash, resourcefulness and agility in the fight? I regret that I shall not be able to answer this query in an unequivocal affirmative.

In the first place, he did not take the "bull" of the ratio by the horns. He was content to be nice and sweet to those who were chasing the bull. By placating those who were never weary of "blackguarding" Sir Basil, he thought he might start his career amidst most favourable conditions for himself.

He did not solve the ratio problem ; he only intensified the problem by humouring those to whom there was no other problem.

Granted eighteenpence was an evil thing. Were there no ways and means by which its evil effects could be mitigated? This brings us to the next point.

In the second place, Sir George had but a poor understanding of the psychology of the Indian giltedge market. He was timid and over-self-diffident in his plans of borrowing. He offered far too much and, therefore, got far too little. The resultant greed for more and more money and the misplaced generosity in favour of higher and higher borrowing rate made all classes of investors averse to place confidence in his credit policy and credit operations.

Even when, in the past twelve months, more propitious conditions have prevailed, his old timidity has not left him. His loan operations are still uncouth ; he is still far from being able to consolidate the gains and to derive maximum advantage from a favourable turn in giltedge affairs.

A Finance Member must needs have the instinct to know a market in all its phases and in all its workings ; he must shrewdly decide on time, manner and

conditions of borrowing ; he must have dash, courage and nimbleness. This is "high finance." Sir George has rather failed in matters of high finance.

Nor in more matter-of-fact aspects of finance was Sir George's judgment always correct. He realised too late the need for retrenchment. He acted too indecisively and too inadequately even after realisation came to him.

Stern, severe, alround economy could have made his task far easier. He shirked this issue as long as he could. He acted only when his hands were forced. On the other hand, he never fought shy of stern, severe, alround burdens on the taxpayer. Where he ought to have been tender, he was stern ; where he ought to have been stern, he was tender.

Sir George had, admittedly, a bad inheritance. He could, however, have made it ever so much less bad if he had taken three wise decisions: (1) Abandonment of eighteenpence ; (2) Wise and scientific credit policy and operations ; and (3) Timely, adequate and well-balanced economy.

No one has been more solicitous of hearing and knowing the "other side" than Sir George. He is a laborious worker, and a conscientious and careful reader of all memoranda on all points of view.

With him, not infrequently, work has meant labour, not action ; study of memoranda has meant not wise decision, but only postponement of final decision.

Too much thinking on the event has left the event to decide its own course. Sir George has not shaped his ends ; it is the ends that have shaped Sir George.

A Finance Member must have four attributes: knowledge, scruple, courage and firmness. Sir George possessed two and lacked two of these essential traits.

In the result, as steward of Indian finance, Sir George was neither "the very button" on Destiny's cap nor "the soles of her shoe." He has lived "about her waist, or in the middle of her favours."

Refined as a gentleman, outstanding as a politician, and fascinating as a human personality, Sir George has proved to be a Finance Minister of but medium stature and moderate achievement.

ALLAHABAD BANK, LIMITED.

AFFILIATED TO THE P. & O. BANKING CORPORATION, LIMITED.

REGISTERED UNDER ACTS X OF 1857 AND VII OF 1860.

One Hundred and Tenth Report of the Board of Directors to the Proprietors to be Submitted at the Ordinary Meeting to be held on Wednesday the 24th May, 1933, at the Bank Premises, 6 Royal Exchange Place, Calcutta, at 3 p.m.

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts duly audited, showing the position of the Bank's affairs as on the 31st day of March, 1933, together with their report.

	Rs.	A.	P.
The result of the working for the twelve months, including the balance from former Account, and after making allowance for taxation, and depreciation is a profit of	9,43,902	2	2
Out of this there has been paid Dividend and Bonus on the Ordinary Shares and Dividend on Preference Shares at the rates of 18 and 6 per cent. per annum, respectively, for the six months ending 30th September, 1932, absorbing	2,29,500	0	0
Leaving an available balance of	7,14,402	2	2

which your Directors recommend should be disposed of as follows:—

	Rs.	A.	P.			
In payment of a Dividend (free of income-tax) on the Preference Shares for the six months ending 31st March, 1933, at the rate of 6 per cent. per annum	45,000	0	0			
In payment of a Dividend (free of income-tax) on the Ordinary Shares for the six months ending 31st March, 1933, at the rate of 12 per cent. per annum ...	1,23,000	0	0			
In payment of a Bonus (free of income-tax) on the Ordinary Shares at the rate of 6 per cent. per annum for the six months ending 31st March, 1933 ...	61,500	0	0	2,29,500	0	0
Carry forward to next account ...				4,84,902	2	2

As a result of the appreciation in the value of the Bank's investments in Indian Government Securities during the period under review your Directors have been enabled to release in its entirety the sum of Rs. 12,50,000 formerly earmarked in Reserve Account No. 2, against depreciation in these holdings, thus restoring the Reserve Fund to its original figure of Rs. 44,50,000.

Under Article 102 two of the Directors, J. S. Henderson, Esq., and Sir Thomas Smith, Kt., V.D., retire from office by rotation but are eligible for re-election.

G. R. Campbell, Esq., having resigned from the Board on leaving India, A. O. Brown, Esq., has been appointed to fill the vacancy and, under Article 108, retires but is eligible for re-election.

Sir Thomas Smith, Kt., V.D., being at present on leave ex-India, has not signed the Balance Sheet.

Auditors will have to be appointed for the year ending 31st March, 1934.

ALLAHABAD BANK, LIMITED,
The 26th April, 1933.

AUDITORS' REPORT.

We have audited the Balance Sheet of the Allahabad Bank, Limited, as at 31st March, 1933, above set forth, with the accounts as kept at the Head Office in Calcutta, together with the certified Returns from Branches and Sub-Agencies. We have obtained all the information and explanations we have required and, in our opinion, such Balance Sheet is drawn up in conformity with the law and exhibits a true and correct view of the state of the Bank's affairs as at 31st March, 1933, according to the best of our information and the explanations given to us and as shown by the books of the Bank.

I am constantly urged to devote, at the end of this section, some space for "Answers to Enquiries." Some readers also expect me to offer occasional tips to get rich quick. My answer to both these enquiries is that it is too hazardous an undertaking—too hazardous, at any rate, for so light and lively a page as Gossip. Now, if I afford this chance to inquisitive readers, and begin replying posers ; and if, as a result, things turn out well as forecast, the recipient of the good fortune will, mentally and hurriedly, thank Eavesdropper and feel warm towards him as a jolly, good fellow but spend the rest of his time in bragging to the rest of the world how his own shrewdness and his own skilful operations had helped to his prosperity. "Look at me, a self-made man"—he would not let others look at aught else. A so-called self-made Money Bag is *non pareil* as a brag and a bore. Success attending my answers to enquiries would create a race of insufferable bores and bumptions braggarts. If, however, my replies prove wrong in the event and losses should ensue, Eavesdropper would hear, in biting terms, what a B.F. he was to presume to enlighten others. "Get-rich-quick" tips do the giver no good when the taker gains ; they do no end of harm to both when they go awry.

* * *

"Vigilance answers queries in *Truth*," says a Correspondent. "Eavesdropper could at least let us know what all he overhears in regard to Company affairs. We can draw our own conclusions on inside information gathered by such eavesdropping. Peering through the key-hole should lead not only to chit-chat about men but also to chit-chat about companies. You, now, keep your readers in good humour. Why not help them to make some profit? Do please think over this suggestion carefully. In any case, I would like to know what you think of investments in sugar companies, Tata Iron & Steel Company, and cotton mills—concerns which have all been given, and are further to be given, substantial protection. Now that interest on government securities has sunk so low, investors would like to turn their attention to ordinary shares of companies, whose destiny might be deemed to be more assured because of the definite and irrevocable policy of Protection. Of industries enjoying protection, which is the most satisfactory for the investing public? Of the concerns in each protected industry, what kind of selection would you make?"

* * *

I have received insistent queries particularly in regard to the future of sugar, the criteria to be kept in view in the selection of good investment propositions among the new floatations for the manufacture of sugar, the relative merits of the second preference, ordinary and deferred shares of the Tata Iron and Steel Company, and the upcountry cotton mills. A retired engineer called on me this mid-week and wished me to help him in choosing a well-balanced bunch of sugar shares. A friend of mine in Cawnpore is a holder of Tata Steel second preference shares from the time of issue and of ordinary shares bought a few years ago ; he seeks guidance as to whether he should transfer the one into the other or keep them as they are, or sell them out and be done with them. "Vasanta Mills of Coimbatore", writes a correspondent, "started paying dividend from the very second year. The preference shares issued recently were over-subscribed. From which, one should gather, that mills in good cotton centres like Madura, Tinnevelly, Coimbatore, Nagpur and Sholapur are doing quite satisfactorily. But the outside public have very little occasion or opportunity to know full details about the capital schemes, management, prices of shares, etc., of such concerns. I would like to invest some money in an assortment of these shares. Could you help he?"

* * *

I should like to take up, in this issue, only the broad question whether the protection, now vouchsafed or hereafter likely in the near future, would enable the steel, sugar and cotton industries to grow and prosper in a manner that could be taken as a guarantee of safety for the investors in the shares of the concerns under these three categories. In broad terms, neither the steel industry nor the cotton industry would appear to have increased its earning power by virtue of the substantial protection extendded to either of them. The Tata Iron and Steel Company has been in receipt of substantial State aid for over seven years ; the taxpayer and the consumer have borne sacrifices in its behalf ; but the shareholders have not received any tangible benefit in the shape of dividends.. By the same token, the sacrifice on the part of the man in the street in the interest of the cotton industry has not even the compensation of any improvement in the returns to the limited class of shareholders in cotton mills. It is only in regard to the sugar industry that the net divisible surplus among shareholders has been substantial as against the substantial sacrifices of the consumer.

* * *

On the face of it, it would, therefore, seem as though sugar shares must be in highest favour from this point of view. The protection extended to the sugar industry is on an adequate scale. The margin for expansion in domestic production is considerable as the present indigenous supply is but a fraction of the total demand. With tariff wall raised so high

Clear Striking Proof!!

In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

against foreign sugar ; with sugarcane grown in abundance in the country ; and with the industry itself demanding no technical skill of an unusual or complex nature, sugar manufacturing concerns have, without a doubt, a good future. So long as the investor is assured of the *bonafides* of the people in charge of the "show", of the clean and honest planning of the constitution, the capital scheme, and the managing agency and other agreements of the company in question, and of the ability of the management both as regards the manufacturing side and the financial side of the business, he will not go far wrong if he lays out a moiety of his funds in sugar shares. There is a large mushroom growth particularly in this field. One has, therefore, to be all the more careful as regards an examination of the credentials of the various companies. Once the credentials are proved to be satisfactory, the risk in this class of investment is minimum. I would discuss, in more detail, the prospects of the sugar industry in a later issue ; but suffice it to say, in this context, that of the three protected industries named, sugar, steel and cotton, sugar should occupy the pride of place in any investment list.

* * *

Regarding cotton mills, I am frankly sceptical about those in the Island of Bombay. Their machinery are old ; their manufacturing processes are anti-diluvian ; and there has been no change for the better in the relationship of the company to the managing agent. I believe that considerable sums will have to be spent in making up the leeway as no suitable provision for depreciation had been made for a good few years. I believe also that owing to the higher wages and higher cost of living in Bombay, the working expenses of these mills would ever remain a handicap as against mills situated in centres where labour is cheap and other expenses are also on the small side. In the whole range of mills in Bombay City, a rigorous examination would result in the emergence of a mere handful of concerns that can be recommended to the investor.

* * *

Ahmedabad Mills have none of these handicaps. But they are mostly concerns managed as family property. So long as most of the shares are held by those who manage the concerns, the interests of the proprietors and the managers remain identical. But if, at any time, the outside public should come to participate in the shares to any large extent, it will be found that the constitution of the companies is such that the new proprietors have but limited rights as against the unlimited power vested in the managing agents. The Articles of Association of the Ahmedabad Mills need not occasion any severe criticism so long as the present phase of identity between proprietors and managers continues. This is not a class of shares which could be strongly commended to the general investor.

* * *

The mills in Sholapur, especially those under the management of Bombay Company Ld., are by far the best propositions in India. Of the Cawnpore mills, those, that did not water their capital nor introduce new-fangled ideas of capital scheme, continue to make a brave showing. The Delhi cloth mills, of which my friend, Lala Shri Ram, is the Guardian Angel, has proved to be, and will continue to be, a veritable gold mine. The mills in Coimbaore are quite satisfactory except that those specialising only in yarn are not so happily situated. The majority of the mills in this centre have new machinery and the production per spindle is satisfactory. I look forward to the installations in such mills as are now engaged only in spinning. Harveys' group in South Indian is safe as a rock. Using the best cotton, their yarn is most popular with the handloom weavers. The financial structure of these companies is on impregnable foundation. But even these mills will have to add weaving sheds sooner or later, if they wish to keep up their supremacy. The three concerns under the management of Binny and Company are models of their kind. They are the last word in efficiency, enterprise, quality of production, and enlightened administration. Calcutta occupies a somewhat modest place in the picture. The trio belonging to Kettlewell Bullens are pure spinning propositions. This was their strength a decade ago ; this is their weakness in the altered conditions today. Addition of weaving machinery is indicated in their case also. Kesoram Cotton Mills and Bengal Luxmi Cotton Mills have passed through various vicissitudes. At the end of a chequered career, they are now in an advanced stage of re-organisation. But as dividend-paying units, they are yet interesting for promise rather than performance.

* * *

Many smaller concerns have come into being in the last few years, the Bengalees naturally feeling that Bengal should be able to supply a percentage of her cloth requirements. But it is too early to discuss them as themes useful for an investor's attention. My friend, Mr. J. P. Dutia, a *bhatia* domiciled in Bengal and talking Bengalee like a Bengalee, has also joined the ranks of those who supply Bengal's needs from manufactures made in Bengal. He has started on a small scale ; but he knows the business and would expand from out of his profits which are assured.

* * *

The Tata Iron and Steel Company has been in the limelight mainly because it is the prince and peer of the race of supplicants for protection. As an investment proposition, it ceased to count a long while ago. Speculators cause the ups and downs ; and they rely on rumours, reports, surmises and gossip totally unconnected with the concrete and only relevant fact of dividend. So far as ordinary and deferred shares are concerned, it is a long, long way to Tipperary of Dividend. Not in this decade, so far as I may judge. Second Preference shares are, however, worthy of careful study. Messrs. Forbes and Lund of Bombay have made a neat analysis of the financial position of the Company ; and they recommend sale of Ordinaries and Deferreds and re-investment in Second Preference. In the succeeding numbers, I will take up, one by one, the three industries, as regards which my correspondents ask for light. Meantime, let me say again that it is far from me to offer "get rich quick" tips ; for if I knew them, why shouldn't I be the first one to make the riches? Tips, like charity, might begin at home ; and when they have done the work at home, they will be exported.

THE READING ROOM

The Monetary Problems of India: By L. C. Jain: Messrs. MacMillan & Co., Ld., Pages 213: Price 10/6.

India has always had one distinction, namely, of assuming an important place in every exposition of monetary theory and practice. Primitive in most other respects, she has been progressive, only too progressive, in monetary policy. She was among the first to forsake silver when as a money metal it threatened to prove treacherous. She was the first to try on a large scale the more modern fad of gold exchange standard. Gold bullion standard became more commonly talked about when the Indian Government claimed to have instituted it in this country. If to-day the modern world finds it a new revelation that a sound monetary system must be securely rooted in an ordered economic life, Indian economists may well be said to have learned this truth long before.

Thus in monetary theory, we have an importance which we sadly lack in other fields. No one, even in the advanced countries of Britain, France and the U.S.A. can claim to have mastered monetary science unless he has devoted much time and effort to an understanding of India's monetary problems. In the last few years, however, they have lost some of their distinctive characteristics. Rather it is more true to say that other countries have acquired the characteristics which distinguished India for a long time before. Take the important issues of Indian monetary and currency history. . The price of silver and its place in the monetary system; the external value of the national currency and the rate at which it may be artificially maintained; the accumulation of gold reserves; combating the propensity to hoard —in all these respects India has now had to share her honours with all the rest of the world. Fancy a cable from the land of the almighty dollar reading like a mofussil report in this country of a fiduciary rupee! The same talk of bank failures, panicky depositors, withdrawal of gold, etc., etc.

In this view, the monetary problems of India have lost their peculiar flavour. But what we have lost in academic and experimental interest we have gained in the increasing study of the conditions that obtain in India and of the developments of new complications as a result of the changes in the world of international finance. The official enquiries that have been conducted during the last few years form by themselves a world of detailed knowledge, which may not have the same interest for the foreigner as the older problems, but certainly have an incalculable value for the Indian student of economics. To keep the student world abreast of the developments in the monetary sphere since 1926 is the purpose of Prof. L. C. Jain in bringing out the *Monetary Problems of India*. With commendable restraint, Mr. Jain has succeeded in making a purely historical account, resisting every temptation to comment on the events that are too near us to admit of impartial judgment. For such a historical account, there is no lack of objective facts. If it is remembered that the currency and monetary problems of India have always been in large part dependent upon the evolution of a more organic system of banking and credit, the results of the labours of the Central Banking Enuiry Committee and its numerous provincial offshoots acquire new significance in an exposition of India's monetary problems. Mr. Jain's chronicle has all the merit of brevity, clearness and in a sense comprehensiveness, too. And one might wonder how the topics which formed the subjects of such raging controversy only yesterday could be treated as if they were always free from any kind of partisan passion. And those who have developed views of their own on the numerous questions dealt with, as for instance, the eighteen pence ratio, the deflationary measures of 1930-31 or the linking of rupee to sterling or the free exports of gold might well wish that Mr. Jain, too, had given his own judgment without, however, marring the objectivity of the historical portions of his work. But this is perhaps the chief merit of Mr. Jain's writings. It is not probably the source from which the partisan can replenish his armoury for current controversy; but it is certainly a volume which the student can go to without fear of imbibing a prejudice against any particular viewpoint.

The plan of the work is indicated in its opening sentence "A study of the monetary problems of India is, as would appear in the following pages, a study of the lack of a true money market in India and the means of establishing it." The introductory chapter is, therefore, devoted to an examination of the constituents and nature of the Indian money market and a short resume of the currency systems in India before 1916 and during the period 1916-25. The second chapter deals with the recommendations of the Currency Commission of 1925-26 leading up gradually through the currency controversy of 1926 to the currency and exchange crisis of 1931. By far the greater part of the work is devoted to the structure of the Indian money market and the parts thereof, including the loan offices, nidhis and chit funds on the one hand, and the post offices, government loan operations and stock exchange, on the other. The relation which the banking enquiry bears to the monetary problems of India is examined at length and the solutions offered are appraised from the detached standpoint of the scholar. While undoubtedly, the treatment of these questions will come in most handy and useful to the large class of Indians who have suddenly developed an interest in the financial and economic problems of the country, one might wish that the international background of recent developments had been dealt with at ome length and in proper relation to the events in India. The chapter on international co-operation is all that there is in the book under review about the wider world of international finance to which India has now become more and more organically related. This omission, however, cannot detract from the value of the book as an at once brief and clear recapitulation of recent developments and enquiries.

Indian Transport Costs: By F. P. Antia: Messrs. D. B. Taraporewala Sons & Co., Bombay: Price Rs. 3/-: Pages 311.

With the Railways in their present plight and with the new yearning, evident everywhere, for industrial development, the importance of the problems of inland transport is slowly receiving due recognition. By all tokens, transport problems would call for a more urgent solution than any other set of economic problems in India. For the organisation of new industries would very largely depend upon the provision of suitable transport. Within the more restricted field of transport itself, there are the problems of the road and the rail, to which the authorities are already giving a great deal of their attention. On the issue of these problems depend the costs of rival means of transport and the fate of the railways and the motor, and the allocation of jurisdictions to the central, provincial and local authorities. In a sense, the problems of transport and the problems of industry have to be taken together. Neither of them can be dealt with separately. But if there is to be any order in which the two can be taken up for consideration and decision, the evolution of certain principles of railway freight and the costs of other systems of transport will have to come first. For, in a country like India transportation is a large element in the costs of production;

OLYMPIA

Mr. J. B. Taylor *versus* Mr. P. R. Rau: Sir George Schuster reverses Indianisation: Sir George—First Financial Adviser? Sterling Loan Debacle—Ignorance or . . . . ?

(From Our Correspondent).

Simla, May 17.

Who should act as the Finance Member when Sir George Schuster goes on leave or deputation shortly? The position is vastly intriguing. It may be remembered that Sir B. N. Mitra was once asked to act as a Member of the Viceroy's Council, straight from his post as Military Financial Adviser. Later on, when he was a Member of the Council, he was asked to preside for the time being, over the Finance Department in preference to his normal portfolio.

* * *

To-day, the situation may not be on all fours; but the fact remains that the acting Finance Membership has created unusual interest. If Sir Alan Parsons had been here, there would have been no speculation on the subject. As it is, he is not able to come back at such short notice. The Acting Finance Secretary is Mr. J. B. Taylor. He is an able official but is comparatively junior. Moreover, it has never happened before that an Acting Secretary should also become an Acting Member.

However, the position does not become easy by quoting this dictum. Who else is available for the post? I find a strong body of opinion in favour of promoting Mr. P. R. Rau, Financial Commissioner for Railways, as Acting Finance Member. He has been a Finance Department Official; and, for all practical purposes, he is on the Railway Board as a representative of that Department. He is a senior officer and is drawing, as a permanent measure, the salary of a Secretary to a Government Department.

* * *

It is argued, on the other side, that such a promotion will reduce the strength of the European element in the Executive Council.

* * *

The answer to which is, that even this addition will not give the Indian element a majority in the Cabinet. And, what is more, the Hindu community, which has for long been given only one seat out of three, will at least temporarily, have its legitimate share of half the number of Indian seats.

* * *

However, the most important point in this connection is that as between the rival claims of Mr. Rau and Mr. Taylor, the former is a senior official. If such a chance were given to Mr. Rau, it may also partly allay the discontent that has been growing regarding the recent policy of the Finance Department against Indianisation.

* * *

Who does not remember the pride with which Sir Malcolm Hailey used to look on the late Mr. A. V. V. Ayyar as his "Guide, Friend and Philosopher" and his entire Indian staff as his best asset. Who does not recall how Sir Basil Blackett, when once answering a debate in the Assembly, asserted, as a proof of the *bonafides* of the Government, that below the rank of Secretary, his staff was entirely Indian?

During Sir George Schuster's regime, the position is exactly the reverse. His first act in this direction was the appointment of a European personal assistant. His predecessors always had Indian assistants. Later on, it was arranged that the Deputy Secretary should be a European and Mr. Christie was appointed. Now, even the Under-Secretary is a European, Mr. Douglas Shearer.

* * *

The other departments of the Government, too, have moved in the retrograde direction; but, on the whole, the strength of the Indian officials has not decreased there. What could be the reason behind this marked change in the policy of the Finance Department?

* * *

Many reasons have been put forward but I will mention the two that have gained general currency here. It is said that Sir George Schuster is anxious to create a nucleus of European staff for the office of the Financial Adviser to the Viceroy under the new Reforms and that the European officials now engaged in the Finance Department are to be transferred later on to the office of the Financial Adviser where Indians will not be employed. Sir George is, the bird whispers, to be the First Financial Adviser.

* * *

The other story discredits the above on the ground that there is no dearth of trained European officials for the Secretariat of the Financial Adviser, and that the real reason for this attempt at partial Europeanisation of the Finance Department is that Sir George Schuster is anxious that some of them should get strongly entrenched in important departments to provide the necessary European leaven for the Finance Department when it comes to be run and controlled by an Indian Finance Minister.

* * *

But, answer me, could any Indian Finance Member have made a worse mess than the one witnessed in the giltedge situation in the last fortnight?

* * *

I need hardly mention how the universal criticism on the sterling loan has been received here. Simla was ready for it as its move was a calculated one. Simla thinks it has built up enough reputation with the Indian market to enable it to be attacked without lasting damage. That explains the reason for the manner in which the authorities here have remained unmoved inspite of indignant protests and criticisms of their loan activities of April-May.

* * *

A question of crucial importance is this: when Sir George Schuster floated the 3½ per cent. loan in India, had he knowledge of the impending 4 per cent. loan in London? If he had that knowledge, it was a clear case of letting down the Indian investor *deliberately*. If he did not know about it, and if the 4 per cent. loan was jumped on him, he should have put up a sturdier fight for the gullible investors here who trusted him with Rs. 30 crores; and if his protest was not of any avail, why should he not have threatened resignation, especially as he has a bare half-year to complete his term? In that case, he would have, by a supreme act at the end of his career, left behind a memory and a name that would be cherished with gratitude and honour. As it is, he is the perpetrator of the most tragical and the most humiliating anti-climax in the history of Indian giltedge.

"HILL-BIRD."

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

"NEW MODEL" TRADE POLICY.

The Cabinet has been busy papering the cracks in the structure of British trade with trade agreements of little or no consequence. The Conservative mind had long been working in these directions. The trials of the export trades have always seemed to them the opportunity of protectionism. To fence the Empire markets, in so far as they may be, as special preserves for Empire products and on the background of Empire trade to set a few small trade agreements would serve for the Government more purposes than one. In the first place, they could be well armed against the oppositionist charges of inaction. Secondly, they could under the pretext of implementing agreements with other countries go on piling restrictions on the import trade. That such a policy tacitly ignores the importance of a revival of world trade to the revival of prosperity in Great Britain is too obvious to be ignored by thinking men. But the advantage in argument before an uninstructed public opinion weighs most with the Government. Last week, it was the Anglo-Danish trade agreement; now it is the agreement with Germany and later with the Argentina with one or two more of import duties sneaked in into the bargain. The three countries afford interesting contrast in their relative power to bargain. For Denmark, Britain is the most important market for her farm products. To Germany, the prospect of further decrease in her foreign trade has lost its terrors. To Argentina, on the other hand, her position as a debtor country is becoming, in the peculiar conditions that rule to-day, a source of strength and not weakness. Britain's gains from her bargains with each of these countries are just as may be expected from the position of each of them. To Denmark, she has given only certain qualified assurances that the British quota systems would not be worked to any undue detriment of her exports of farm products. On the other hand, Denmark has been forced to continue for a minimum period of three years the regulation of all her imports of British coal and into giving her a 80 per cent. quota with the promise of an increased market for iron and steel embodied in a gentleman's agreement. Denmark undertakes also to stabilise or slightly reduce certain of her import duties consistent with the principle of the "most favoured nation clause." Germany has agreed to a system of licences to be issued in future for the importation of British coal and coke to a minimum of 180,000 metric tons a month. If, however, the German consumption should exceed 7,500,000 tons in any month, there would be a proportionate increase in the licences from imports. Britain offers in return slight reductions of about 5 per cent. on a list of articles, musical instruments, clocks, jewellery, safety razor blades, etc., leaving the duties at a level ranging broadly from 15 per cent. to 25 per cent.

The Official Claim.

It is difficult to entertain any illusions about the practical advantage of the treaty to either party. To the Germans, it is tantamount to an assertion that a tariff level of about 20 per cent. on gramophones, mouth organs and cheap jewellery, all of which form but inconsequential items in Anglo-German trade, should be regarded as the minimum to which Britain would consent. Likewise, Britain has to reconcile herself to the implicit suggestion that three million tons of coal is the utmost she can export to Germany as compared with 5½ million tons in 1929. But the official spokesmen have a way of their own in expounding the value of their achievements. Answering a barrage of questions emanating from all sections of the House, Mr. Runciman declared that the Government had driven as hard a bargain as it could. He stressed the fact that besides the 180,000 tons per month which they could send to Germany under the agreement there would be no limitation on bunker-coal or coal sent to the free ports which together, he estimated at about 1 million tons per month. He claimed that 3,800 more miners would be given employment all the year round though, on the other hand, possibly 1,800 workers might be affected in the trades in which tariff concessions have been made.

Truckling to Coal Trade.

Mr. Arthur Greenwood speaking for the Opposition belittled the Government's achievements as a "ridiculous mouse," but indicated that his party would support the agreement. Sir Austen Chamberlain's speech and his final action in following Mr. Lansbury in the same lobby were, strangely enough, far more extreme. Sir Austin accused Mr. Runciman of fixing his attention too much upon coal and sacrificing to it the interest of smaller industries. The Agreement, Sir Austin declared, came as a menace to towns like Birmingham. It was not fair to expect the smaller trades to give up their prosperity for the sake of larger industries. The duties on jewellery musical instruments, clocks, hollow ware and razor blades have been fixed by the Tariff Advisory Committee as fair. He pointed out that the clock-making industry was now producing something like 2½ million clocks a year and employing more than 5,000 people and that the prosperity of this industry must be sacrificed in the interests of the coal industry. So that it will be clear from this that whatever advantages there are in the Anglo-German treaty had been gained at the expense of industries which have already grown up behind tariff walls. Considering the compromise with a number of principles, it is fair to suggest that the Board of Trade has not made much of a bargain with Germany.

Argentine Trade Agreement.

The Argentine agreement is even more unfavourable. Britain probably recognised more fully than other creditor countries that, if the value of foreign investments is not to be utterly wiped out, she must continue to buy from her debtors. The first article of the convention deals with the Argentine's chief exports to Britain, namely, meat, particularly chilled beef. By this article the United Kingdom undertakes not to restrict the imports of Argentine chilled beef into the United Kingdom below the quantities permitted under the Ottawa Agreements Act, and then only after consultation with the Argentine Government, unless it becomes necessary in order to maintain a remunerative level of prices. Argentine chilled beef will not be reduced by more than 10 per cent. below the Ottawa levels, unless imports of chilled beef or frozen meat from the Dominions are also reduced by a percentage equal to the percentage reduction of Argentine chilled beef in excess of 10 per cent. The article also provides that no restriction of Argentine imports of frozen beef, mutton or lamb below the Ottawa levels shall be imposed unless the imports of such meat from the Dominions are also reduced. Article 2 of the Convention deals with the exchange situation. At present a sum of not less than £10,000,000 is frozen owing to the financial difficulties and consequent exchange restrictions. The Argentine Government undertakes that the full amount of the sterling exchange arising from the sale of Argentine products of the United Kingdom, after deduction of a reasonable sum annually towards the service of the Argentine public external debts (national, provincial and municipal) payable in other countries, will be made available to meet the current requirements of the United Kingdom. The Argen-

Air Mail Week.

tine Government will also set aside during the year 1933 the sterling equivalent of 12,000,000 paper pesos, out of which a cash payment will be provided to holders. The larger frozen balances are to be dealt with by means of a funding-scheme, under which the Argentine Government will offer to issue sterling bonds in exchange for the frozen pesos. These bonds will be issued at par, will carry a rate of interest of 4 per cent. per annum, and will be repaid within twenty years, repayment beginning after five years. In the Protocol it is declared that the Argentine Government will maintain on the free list coal and all other goods now imported into Argentine free of duty ; and discuss with the British Government the means to secure the present position of British coal in Argentine markets. The British Government declares that no new or increased duties will be placed on various goods, including meat, bacon, wheat and maize, imported from Argentina.

Prejudicing the World Conference.

Though the agreement with the Argentina is comparatively free from positive defects, yet combined with other agreements of a similar nature, it forms what the *Economist* calls a "new model" trade policy which seems likely greatly to prejudice the prospects of the World Economic Conference. By using the stray advantages she has to secure for herself, a specially favoured treatment in respect of exchange control and repayment of frozen credits, Great Britain has caused feelings of unfriendliness in the United States. Even otherwise such activity in bilateral negotiations and promotion of regulated licences and confiscated trade is an ominous prelude to the World Economic Conference over which the Premier, at any rate, is apparently so enthusiastic.

More Import Duties.

Even more out of tune with the World Economic Conference than the trade agreements is the frequency with which increased duties are being recommended by the Import Duties Advisory Committee. On April 28th, a 33⅓ per cent. duty on muttons was duly enacted. Rubber boots and shoes had a further increase in the levy. Linseed oil was subject to a specific duty of £3-10-0 per ton which is equivalent to 26 per sent. *ad valorem* on the basis of the present prices. It will be remembered that in pursuance of the Ottawa agreement, a duty of 10 per cent. was imposed on non-Empire linseed. The British seed-crushing industry immediately sought and obtained a duty of 15 per cent. on foreign linseed oil and it is this duty which has now been increased. Fabric gloves and willow cane or wicker baskets will have a duty as from May 5th of 30 per cent. as compared with the previous level of 10 per cent. The duty on fabric gloves furnish an apposite instance of the want of a sense of proportion amongst protectionists. The industry which has now been protected does not employ, according to the *Economist*, even 10 per cent. of the number of people who are engaged in spinning fine yarns to supply the exporters of gloves in Germany.

The Threat of Oil War.

Political antipathy and economic protectionism are often found to be closely related; and, in this view, it is not altogether fortuitous that the ban on the Russian goods could have come at a period of fresh tariff making. The repercussions of the insensate fury with which the Government precipitated the economic war between Britain and Russia are beginning to be slowly realised. It is now feared that diversion of Russian oil away from the British markets would let loose another period of cut-throat competition in the world oil markets. For Soviet Russia exported nearly 600,000 tons of petroleum to Great Britain in 1932. Although Russia was not a member of the World Oil Conference, the present amount of her exports were fully reckoned with when the Conference reached with such difficulty, the new agreements regarding price and quota. It is, therefore, inevitable that when the next Oil Conference meets in June it will have to face a most serious problem. But in one respect however, it must be thankful that one great uncertainty of recent months has been cleared up. It is difficult to imagine how the Conference could tackle its tasks with any confidence and surety if the negotiations between the Anglo-Persian Oil Company and the present Persian Government had not been definitely concluded by the signing of a fresh treaty.

UNITED STATES OF AMERICA.

THE FARM BILL.

The Federal Farm Bill has at last passed the two Houses of the Legislature. It is, however, not ready to be presented to Mr. Roosevelt for the Presidential signature, as there would appear to be slight discrepancies in the texts approved by the two Houses. And unless the discrepancies are removed it cannot take its place on the Statute Book. As is well-known by now, it is a motley piece of legislation, because there was no clear-cut unity of purpose in it and it embraces provisions which are better formulated in separate bills. There are two objectives which the bill aims to secure. One is the provision of farm relief and the other is the provision of additional currency and credit. As regards the former, the Secretary for Agriculture has been empowered to levy a tax to be paid by the consumer on any one of a list of products or articles derived from or competition with them. By means of this tax, the present price and average price of the period 1909-13 are to be equalised. The funds that are thus raised are to be distributed to the farmers either in rent for land to be leased by the Government and left fallow or in cash payments granted in consideration for a curtailment of production. It is also contemplated that all dealers in agricultural products are to be brought under the control of the Secretary by the institution of a system of licences. Another important provision authorises the issue of 3,000 million dollars of Federal Bonds to be given to farm mortgage holders in exchange for their present mortgages. The third part is the famous inflation amendment which enjoins the Federal Reserve Banks to buy 3,000 million dollars of Federal Bonds to be issued for the purpose. In addition to these, there is the authorisation of the President to reduce the legal gold content of the dollar by not more than half, to make silver equally acceptable as gold at any prescribed ratio and to accept not more than 100 million dollars of silver at a price not exceeding 50 cents an ounce in payment of war debts.

Money Dictator.

The effect of this legislation is that as soon as President Roosevelt signs the Bill he will become money dictator with power to devalue the dollar to 50 cents, to authorise the free coinage of silver, to issue 3,000 million dollars in currency and another equal amount in bonds and to permit part payment of war debts in silver. As the bill gives full discretion to the President as to the time and degree of this inflation, speculation is rife as to whether, after all, Mr. Roosevelt might not prove to be far more conservative than he was thought. It was believed

Air Mail Week.

that on Thursday Mr. Roosevelt would afford a full explanation of his plans for inflation when he addresses the Chamber of Commerce of the United States. His speech, when it came, did not clear up matters sufficiently. In that speech, he urged members to increase their wage rates in conformity with the rise in commodity prices. It is essential, he said, as a matter of national justice that the wage scale should be brought back to meet cost of living and that this process should begin now and not later. This was perhaps the only hint available in the speech as to the coming inflation. For otherwise, the President was inclined to expatiate on the changes in business policy rendered necessary by present conditions. He condemned the "unfair methods of competition and cut-throat, prices" which had produced "general chaos" and appealed to industrialists to co-operate with each other and with the Government. "Each and all of you in your own units", he said, "are but an integral part of a great whole and our national economy must be expressed in terms of the whole rather than in terms of units." The appeal for increased wages is regarded by speculators as meaning that the President will use his inflationary powers to produce a rise in commodity prices. But looking at the general sentiment in the country, it would seem that, just as President Roosevelt had his hands forced in the matter of legislation for inflation, so would he be without choice in the matter of putting it into execution. For inflation will, in any case, be forced on him by the outburst of discontent among Middle West farmers. A national farmers' strike has been decreed for Saturday May 6th, and it is reported that the farmers are determined to starve America into a recognition of their grievances.

Commodity Prices Advance.

While a dispassionate enquiry into the prospects of inflation may yield unfavourable results, the markets have shown no such cautious restraint. Most of the days of the week under review were busy days in which stock and commodity prices were being pushed steadily up under the pressure of speculative buying. In the realm of finance, the dollars weakened considerably as a result of President Roosevelt's hint that he meant to use the inflationary powers conferred upon him by the Farm Bill. The movement of the depreciation of the dollar threatened, at the week-end, to degenerate into a panic. There was selling noticeable from every quarter, not so much on speculative account as in commercial farms and investors. But, on the whole, speculative operations were not very marked, as may be seen from the fact that the discount on forward dollars widened by relatively small amount. Towards the close, the prospects of the dollar seemed pessimistic. So far as sterling is concerned the "control" was on the alert and there can be no doubt that the decline would have been much more pronounced had not the "control" intervened and sold francs.

Business Prospects.

Real as well as monetary factors played their part in the market advance. Business indexes continue to be favourable on the whole. Car loadings for the week are expected to show an increase of about 42,000 cars over the previous week, making a possible total of 530,000 cars. Automobile production at the first of the month was 3 per cent. higher than last year at the same time. The beer industry and all allied trades such as cooperage and lumber of certain kinds are reporting a heavy demand and good trade. Other branches of business, including retail trade, give fairly good reports, and much more confidence is being shown, although there is still a feeling that the improvement is largely seasonal.

FRANCE.

THE BRITISH CREDIT AND ITS EXPLANATION.

While the financial position of France has always remained enviably strong, the Treasury continues to have its own perplexing conundrums. It is an interesting commentary on the peculiar methods of French politics that the 1933 budget is not yet on the Statute Book. The result of this dilatory progress of the Finance Bill is that while the Government may not proceed to collect its taxes, its obligations under the various laws to advance money for housing, fortifications on the frontier and similar enterprises cannot perforce wait. In the light of this it is certainly understandable that the French Treasury should proceed to acquire a credit of £30 million from the London market. It is understandable, too, that the British Government should use its good offices to persuade the London market to accommodate the French Treasury. But it may not be so clear why the Bank of France or the French capital market should not feel called upon to put forth the necessary funds.

If such a question is posed, the changes in the reserve position of the Bank of France would seem to acquire relevance and even some significance. People become strangely aware now of the decline in the gold reserve of the Bank of France to 80.8 milliard francs on April 28th. Within the fortnight previous thereto, there had been a fall of nearly 300 million francs. While the decline is certainly noteworthy, it would be

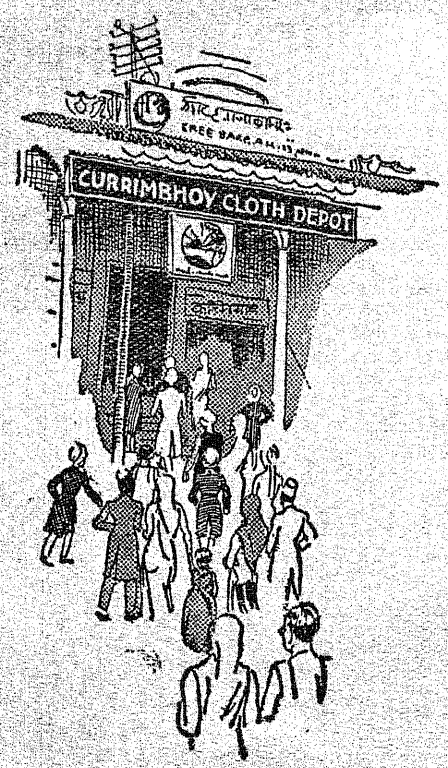
rash to think that the Bank has been subject to any serious pressure on its reserves, or that it indicates a revival of the peasant's propensity to hoard the yellow metal. It has been definitely ascertained that there is no indication of any considerable demand by individual Frenchmen or of a re-emergence of that traffic in bars by small banks which had been witnessed in the past. Nor has there been any appreciable pressure on France's holdings in gold on account of the developments in America. Much of the gold which has been parted with by the Bank of France is accounted by the individuals in small countries which nominally remain on the gold standard but refuse to part with the metal except on the reliable assurance that it is meant for despatch to another central bank. Such foreign nationals have naturally resorted to buying French francs and acquiring gold from the Bank of France. There has, thus, been a transhipment of gold across the frontiers in considerable quantities. There has been one direction, however, in which the drain on gold has been both appreciable and persistent. The British Exchange Equalisation Fund have been obliged, in their efforts to protect sterling from any undue appreciation as against the dollar or gold currencies, to acquire francs and in order to avoid the difficulty at a future date of holding large foreign balances with their own peculiar problems of transfer to convert their French balances into gold. If the causes of the decline in the gold reserve, in itself inconsiderable, are appreciated, then it would be seen that there is little reason to think that the position has been weakened in any degree.

The explanation for the Treasury resorting to a foreign market for a temporary accommodation has, therefore, to be sought in other circumstances than the effects of the present unsettlement in international finance on the position of the Bank of France and the Paris money market. That France has money to spare for big borrowers can be seen from the latest statement that negotiations between the Turkish ex-Minister of Finance and a group of French capitalists for a loan of about £50 million are well-advanced, and the loan is expected to be for a lengthy period and at a low rate of interest. It is, therefore, true to suggest that the Bank of France and financial circles in Paris would like the French Treasury to meet its temporary requirements from lenders with whom they cannot take any sort of liberty. The Bank of France, for its part, has too live a recollection of its earlier experiences with the Treasury to agree to help in the present juncture. The idea that a central bank should underwrite all the improvidence of a government is being fast discredited. Besides, if the Treasury is to borrow more from the Central Bank, special legislation would be necessary which would be extremely undesirable as it is in effect an advertisement of the Government's impecuniosity.

But it may still be wondered whether the Bank of France has altogether escaped from the embarrassments of this position. Though it has not figured in this loan, it has still a *role* to play at the end of the currency of the loan, when it would be called upon to surrender to the Government its sterling balances against a payment at home in francs. Considering the manner in which the budget has been tossed about in the legislature, it is not certain that even at that comparatively distant date, the Government would be in possession of funds with which to pay the Bank. The indications are that the British loan would have to be renewed unless, of course, the



WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

Air Mail Week.

attitude of the Bank of France and also public opinion which is now behind it, modifies somewhat.

MANCHUKUO.

The following is Manchukuo's Ten Year Plan according to the *Financial News*:

The ten year plan launched by the new State of Manchukuo lays the greatest stress on transportation facilities.

It is anticipated by the Government, *Reuter* reports, that within ten years there will be: 2,400 miles of new railways, with the object of having eventually 15,000 miles of railways; 36,000 miles of good roads and an air route of 2,100 miles, to be achieved within three years.

Telephone Services.

It is also expected that within ten years telephone services will be opened in all principal cities, and the postal and telegraph services will be extended.

Model cities will the constructed at Ksinking, Mukden, Harbin, Kirin, and Tsitsihar.

Harbour improvements will be made at Antung, Yingkow, and Hulutao.

Forests will be improved by refusing new permits to fell timber. State forests will be under Government management and private ones under official surpervision.

The Bank of Manchukuo will aid industries and agriculture by supplying longterm funds at low interest.

Various coal mines will be brought under unified control.

The weights and measures system will be improved and unified. Patent and trade mark laws will be formulated. Manufacturing districts will be opened at Mukden, Antung, Harbin, and Kirin.

"Redistribution of Wealth."

The four basic principles which form the foundation of the future economic, industrial, and commercial development of Manchukuo are:—

Government control of important industries, in order effectively to exploit all resources.

Redistribution of wealth by "abolishing the evil practice of one class monopolising the profit gained by exploiting natural resources, and developing industries in order to distribute the benefit to all."

Inviting capital from all countries for the exploitation of resources and development of industries.

Aiming at economic co-operation in the Far East, importance is to be given to relations with Japan, to effect a closer mutual relation.

Ogpu Arrests Manchukuo Official.

The Secretary of the Manchukuo Consulate at Blagoveschensk, Russia, who was recently arrested by the Ogpu on a charge of military espionage, has been released, according to information received at Harbin by Reuter.

The Manchukuo Government, it is stated, will lodge a strong protest with Moscow against his arrest.

GERMANY.

THE ECONOMIC PROGRAMME.

While the heroics of Herr Hitler in the realm of foreign affairs have justly held the attention of the world, it is not to be supposed that the problems of economic reconstruction are altogether overlooked by the Government at home. There is every reason to think that the members of the Cabinet are giving their best time and energy to the evolution of a comprehentive plan. Herr Hitler himself made the country expect before long an elaboration of the economic programme he had in mind. The National Labour Day had been fixed for the purpose; but the promise of the Government in this regard was not taken seriously by the country. For, a vast mass gathering could hardly be the occasion for the exposition of intricate problems of agriculture or industry or foreign trade. The Chancellor was, therefore, content to emphasise that the Government would not be satisfied with tinkering with the problems or with instituting any kind of patch-work. He led the people to expect that, when the Government put its hand to the task of economic reconstruction, it would set in motion gigantic forces, which would increase the prosperity of all classes and establish it on a sure basis. But there was, at the same time, a somewhat implicit reference to the intricacy of the German economic problem. For the Chancellor referred to a trade policy "which will ensure continuity of production without annihilating German agriculture." Thus the conflict between the interests of agriculture and the interests of an industry relying upon the supply of the necessary raw materials from foreign countries, who cannot be expected to trade with Germany except on the basis of a reasonable system of free trade, still continues to intrigue the Government and offer in the economic field a check to the Chancellor who has shown himself capable of irrepressible in other spheres of public policy.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to-day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE ASSURANCE COMPANY
ESTABLISHED 1825

Head Office: 3, George Street, Edinburgh.

London: 46, Queen Victoria St., E.C. 4. 15-A, Pall Mall, S.W. 1.

HEAD OFFICE FOR INDIA:
Standard Buildings, 32, Dalhousie Square, Calcutta.

There is, however, one respect in which the Government have apparently clarified their ideas and are ready immediately for action. The proposals with which to make the onslaught on the "intolerable burden" of present interest rates have been framed by Herr Hugenburg and submitted to the Chancellor in the form of a draft bill. The basic idea is to extend the legislative provisions for the protection of debtors, which now apply to only one specific region, to the whole of the Reich. The idea is to bring down not only the rate of interest payable by the agricultural peasants to 4½ per cent. but also to bring down the claims which exceed the limits of normal lending on first mortgages to 50 per cent. of their normal value. According to the Berlin Correspondent of the *Economist* Herr Hugenburg proposes in addition to reduce the interest on all mortgage bonds as follows:

The holders of mortgage bonds will be offered new 4 per cent. mortgage bonds in exchange, which will be secured by special guarantee against further conversion for a period of ten years, and will be free of taxation for the same period. It will also be possible to use them as security for bank advances on especially favourable terms. Holders who refuse conversion will be under certain definite disadvantages, including a graduated capital tax on mortgage bonds which pay more than 4 per cent.

Except for these specific proposals the rest of the ideas of the Government in regard to economic reconstruction are lamentably hazy. In his speech on May Day, the Chancellor indulged in a language which is appropriate only to declamations on the Powers that have imposed humiliating conditions on Germany and quite out of place in an explanation of an economic programme. There was the same reference to a "gigantic programme," a "grand scale" and "brushing aside of resistance." But the crux of the idea behind this effusive talk is the institution of a large scheme of re-building of roads, the cost of which will be borne by the present generation without being shared in any way by posterity. There can, indeed, be no doubt that, if there is to be a real increase in economic prosperity, the Government would have to institute recuperative measures in regard to both agriculture and industry. But at present there is little definite promise even in regard to the rebuilding of roads about the resource for which the Chancellor was unable to give any hint.

Like Britain, the other great industrial nation of Europe, Germany has also attempted, during recent times, to render her foreign trade more secure by trade agreements with her neighbours. Commercial treaties have been concluded both with Great Britain and Holland. While in regard to the former, the advantages gained from Britain are restricted to the lowering of import duties on certain exports from Germany, in the case of Holland the net gains are perhaps even worse. The treaty only shows that the quota system has more or less come to stay in Europe and that every trade agreement will have to take it for granted and to make its additional proposals only on the basis that such quotas would continue. In the present instance, the imports of bacon eggs and cabbages from Holland have been conceded reductions of duty but the volume of their imports has been restricted a great deal. The German Government might claim with justice that they have forced Holland to concede what they have long desisted, the idea of a quota system for Germany's imports.

TRADE AGREEMENTS OF U. K. WITH NORWAY AND SWEDEN.

In the agreement with Sweden it is provided that internal duties levied in either countries which are produced or manufactured by the other will not be greater than those of native goods.

In the event of a quantitative regulation being applied to imports of fish into the United Kingdom, the agreement fixes the minimum quantities of white fish and fresh herrings which are to be allowed to be imported from Norway, and if imports of bacon, ham and certain dairy produce are to be similarly regulated, imports from Norway are to remains unchanged.

Arrangements have been made whereby not less than 70 per cent. of Norway's coal imports will be obtained from the United Kingdom, and the proportion of Norway's coke imports, now 75 per cent. will be maintained.

The exchange of notes records an undertaking that subject to certain exceptions, neither country will impose quantitative restrictions on imports such as would nullify the effect of the tariff concessions granted in the agreement.

Tariff concessions by Norway in the new agreement include an undertaking to reduce the duties on certain classes of textiles, footwear, carpeting, etc., and varnishes, an undertaking to maintain the free entry of certain other goods, of which coal and coke, tinplate, sewing machines and certain textiles and machinery are the most important, and an undertaking by Norway not to increase the present rates of duty on a large number of goods.

An agreement with Sweden, which was also signed recently, also undertakes to reduce the duties on many classes of goods including various cotton and woollen piecegoods, leather, footwear, small motor cars and motor cycles, etc. Coal, tinplate, coke, and wool are among the goods allowed free entry by Sweden and there is a lengthy list of articles on which an undertaking not to increase the present rates of duty has been given.

The United Kingdom undertakings regarding import duties are largely safe in both agreements and include a promise to reduce the duties on various classes of wrapping and other paper and other goods in which the Scandinavian countries especially are interested. Specific reductions range up to about 10 per cent. In some cases the existing 10 per cent. duty is being removed and the goods added to the free list. Wood pulp, bed props and newsprint are to be maintained on the free list and the undertaking not to increase the existing duties applies to a large number of articles.

The undertaking contained in the agreement with Denmark not to impose import duties on bacon and eggs, nor to increase the present duty on bacon and eggs is repeated in this agreement.

(*Continued from page 915.*)

and the authorities as well as individual *entrepreneurs* will have to know the conditions of transport in which they will have to work any intelligent plan of industrial development.

And yet strangely enough, the economists and students in India have for long afforded a stepmotherly treatment to this study of transport problems. It is now come into its own; and the latest addition to his volume of literature is from Mr. Antia whose *Inland Transport Costs* abounds in a large mass of statistical and other information. Mr. Antia naturally gives prominence to the problems connected with the railways. But he has not, like most other workers in the sphere, neglected the other systems of transport. Nor has he been content to deal only with the general policy and prospects of the railways; but he rather examines the problems of transport, as they concern each of the principal industries and commodities of India. I may venture to say about this volume that, studied carefully, it might well prove the inspiration and source for other similar and more detailed work. The principal point in Mr. Antia's work is that the policy of the authorities, in seeking to make a net profit for the Government exchequer out of the Railways, though no doubt attractive, is tantamount to a heavy indirect taxation on trade and industry and is calculated to retard the progress of industry and trade. The volume should certainly enjoy the careful attention of those who have a flair for detailed economic study.

STATISTICAL INFORMATION

CALCUTTA FOREIGN TRADE.

The improvement recorded in March in the overseas import trade of Calcutta in private merchandise was not maintained in April, the value receding from Rs. 3.01 crores to Rs. 2.61 crores against Rs. 3.22 crores in April, 1932. Exports too declined in value from Rs. 3.67 crores to Rs. 3.35 crores against Rs. 3.39 crores in April, 1932.

IMPORTS.

A comparison of the values of the principal imports with the figures for April, 1932, is indicated below, the figures in brackets representing the increase or the decrease as the case may be:—

	In lakhs of Rupees.
Cotton goods	53 (−3)
Machinery and millwork	34 (−9)
Iron and steel	13 (−2)
Other metals	8 (−8)
Oils, mineral	10 (−9)
Chemicals and chemical preparations (excluding chemical manures and medicine)	10 (level)
Hardware	9 (−1)
Electrical instruments	7 (−2)
Liquors	5 (−1)
Sugar	2 (−14)

The total yardage of cotton piece-goods expanded from 25 million to 28 million but the value remained almost level. No importation of Kerosine oil from countries other than Russia accounts for the heavy drop under Mineral oil. The heavy fall under Sugar is mainly due to a noticeable decrease in the importation of Sugar and molasses from Java.

EXPORTS.

The variations in the values of the principal exports as compared with the trade of April, 1932, are indicated below:—

	In lakhs of Rupees.
Jute manufactures	143 (−12)
Jute, raw	59 (−6)
Hides and skins	23 (+7)
Grain, pulse and flour	17 (level)
Tea	11 (+4)
Lac	11 (level)
Pig Iron	6 (level)
Manganese ore	3 (−2)

DIRECTION OF EXPORTS.

The United Kingdom was the chief buyer of tea and raw skins. Raw jute and raw hides went mostly to Germany. Gunny cloth and lac were chiefly shipped to the United States of America. Japan was the principal customer for Manganese ore and Pig iron. Gunny bags were shipped to Australia, Union of South Africa, the United Kingdom, Java and Portuguese East Africa. Rice which formed the bulk of the trade under the head "grain, pulse and flour" went mostly to Mauritius.

KARACHI FOREIGN TRADE.

The statistics of the foreign trade of the port of Karachi for April, 1933, issued by the Collector of Customs, show that the total value of imports (merchandise) amounted to Rs. 1.10 crores, an increase of Rs. 5 lakhs and that of exports to Rs. 1.08 crores, an increase of Rs. 2 lakhs as compared with the figures for April, 1932.

Comparative figures of the principal imports and exports for April, 1932 and 1933, are given below:—

IMPORTS.

In April, 1933.

	Quantity. Tons.	Value. Rs.
Cotton manufactures	...	44,31,543
Sugar	8,219	8,34,188
Liquors	...	3,87,619
Vehicles	...	3,89,660
Oils	...	2,28,326
Metals and ores	...	5,43,163
Machinery and mill work ...	...	4,49,553
Woollen goods	...	1,27,076
Cotton, twist and yarn	...	9,393

The United India Life Assurance Company, Limited, Madras.

BONUS DISTRIBUTION

Certificates of Bonus relating to the last Quinquennium are being prepared and will be posted from the 20th instant. As a measure of economy, they will be sent only by ordinary post.

Policyholders in respect of whom there may be any change of address recently are requested to communicate forthwith to the Company's Head Office their present address so that the Bonus Certificates intended for them may not be sent to a wrong address.

The total amount of the Company's divisible profit for the Quinquennium was Rs. **6,09,567-7-11** enabling distribution of Bonus to Policyholders at the following rates:—

In respect of (full) With Profit Whole Life Policies and Whole Life Limited Payments Policies issued during the Quinquennium, Rs. 22-8 per Rs. 1,000 per year and in respect of Policies issued before the Quinquennium, an additional Bonus calculated at the rate of 12½% of the previous total bonuses.

In respect of (full) With Profit Endowment Policies issued during the Quinquennium, Rs. 18 per Rs. 1,000 per year and in respect of Policies issued before the Quinquennium an additional Bonus calculated at the rate of 12½% of the previous total bonuses.

In respect of Policies under the Capitalized or Deferred participation in profits plan, a Bonus of Rs. 7-8 per Rs. 1,000 per annum in respect of Whole Life and Whole Life Limited payments assurances and a Bonus of Rs. 6 per Rs. 1,000 per year in respect of Endowment assurances.

All Bonuses vest immediately.

M. K. SRINIVASAN,
Managing Director.

"UNITED INDIA ASSURANCE BUILDINGS,"
Sembudoss Street,
Madras, 13th May, 1933.

	Increase or decrease as compared with April, 1932. Quantity.	Value.
	Tons.	Rs.
Cotton manufactures	...	+3,82,138
Sugar	+2,879	+2,66,740
Liquors	...	+1,84,015
Vehicles	...	+1,43,892
Oils	...	−3,64,492
Metals and ores	...	−2,13,715
Machinery and mill work ...	...	−2,04,797
Woollen goods	...	−1,13,674
Cotton, twist and yarn	...	−5,594

The increase under cotton manufactures occurred in imports of white goods which amounted to 17¼ million yards valued at Rs. 27 lakhs as against 13¾ million yards valued at Rs. 23 lakhs in April, 1932. Imports of coloured goods at 6,826,000 yards valued at Rs. 13.09 lakhs showed an increase of 292,000 yards in quantity, but a decrease of Rs. 45,000 in value. Arrivals of grey goods amounting to one million yards valued at Rs. 2 lakhs showed a decrease of 400,000 yards in quantity and Rs. 1 lakh in value. The share of the United Kingdom in the total imports of cotton piecegoods during the month under review was 20½ million yards valued at Rs. 35 lakhs, an increase of 24 per cent. in quantity and 16 per cent. in value, while that of Japan was 4½ million yards valued at Rs. 6 lakhs, a decrease of 12 per cent. in quantity and 27 per cent. in value as compared with imports in April, 1932. The increase under sugar occurred in receipts of beet sugar from the United Kingdom. Java, on the other hand, sent less, *viz.*, 4,673 tons as against 5,338 tons in April, 1932. Imports of liquors increased mainly as the result of larger arrivals of whisky from the United Kingdom. The decrease under oils was due to there being no imports of fuel oil as against an import of 1¾ million gallons valued at Rs. 4 lakhs in April, 1932. The decrease in imports of metals was most noticeable in receipts of steel bars from the United Kingdom and the Continent and tin-plates from the United Kingdom. Reduced arrivals of electrical machinery from the United Kingdom, Canada and the United States of America and of sewing machines from the United Kingdom mainly accounted for the fall in imports of machinery.

EXPORTS.

In April, 1933.

	Quantity. Tons.	Value. Rs.
Cotton, raw	16,474	79,25,210
Rapeseed	8,512	9,18,038
Wool, raw (Indian and foreign) ...	759	5,38,490
Barley	15	852
Wheat flour	202	20,400
Wheat	22	2,104
Skins, raw	369	3,30,001
Hides, raw	158	80,991

	Increase or decrease as compared with April, 1932. Quantity.	Value.
	Tons.	Rs.
Cotton, raw	+8,698	+39,65,266
Rapeseed	−12,778	−19,31,940
Wool, raw (Indian and foreign) ...	−10	−5,38,854
Barley	−3,389	−2,10,395
Wheat flour	−1,527	−1,51,062
Wheat	−81	−7,896
Skins, raw	−46	−2,842
Hides, raw	+22	−1,118

The increase under cotton occurred in shipments to Japan, the United Kingdom, China, France, Germany, and Italy. The heavy drop in shipments of rapeseed was due chiefly to a greatly reduced demand from Italy. France also took less, but the United Kingdom took more. The decline under wool occurred in shipments to the United Kingdom. The United States of America, on the other hand, purchased more. Shipments of barley decreased as the result of an entire absence of demand from Germany and the United Kingdom. The decline in exports of wheat flour was due to a poor demand from Port Sudan, Arabia, Aden and Italian East Africa.

MADRAS FOREIGN TRADE.

The total value of imports from foreign countries into the Madras Presidency during April, 1933, was Rs. 1,11,24,747 against Rs. 1,34,78,816 in the corresponding period of the previous year, showing a deficit of Rs. 23,54,069. The commodities that were responsible for the deficit were: Dyeing and tanning substances Rs. 2,48,763 (−Rs. 4,58,097); metals and ores 4,205 tons, Rs. 11,32,897 (−303 tons, −Rs. 2,99,176); kerosene 126,029 gallons, Rs. 57,207 (−488,912 gallons, −Rs. 2,40,655); cotton raw 10 tons, Rs. 7,500 (−304 tons, −Rs. 2,32,228); cotton twist and yarn 574,631 lb., Rs. 5,48,624 (−466,716 lb., −Rs. 5,04,386); piecegoods grey (unbleached) 2,598,552 yds., Rs. 3,96,782 (−1,740,797 yds., Rs. −3,00,495); piecegoods white (bleached) 2,156,340 yds., Rs. 4,97,787 (−291,101 yds., −Rs. 1,18,284); silk raw 26,301 lb., Rs. 89,050 (−54,025 lb., −Rs. 3,22,161); artificial silk yarn 283,728 lb., Rs. 2,34,171 (−497,454 lb., −Rs. 5,67,476); other articles Rs. 5,01,852 (−Rs. 7,99,958).

The total value of exports of Indian produce and manufactures from the Madras Presidency to foreign countries during April, 1933, was Rs. 1,47,11,929 against Rs. 2,38,40,252 in the corresponding period of the previous year, showing a deficit of Rs. 91,28,323. The principal commodities that accounted for the deficit were: coffee 24,453 cwts., Rs. 14,17,862 (−16,510 cwts., −Rs. 11,57,284); fibre for brushes and brooms 255 tons, Rs. 77,427 (−739 tons, —Rs. 2,73,034); fruits and vegetables, dried, salted or preserved 387 tons, Rs. 1,59,159 (−1,065 tons, −Rs. 5,16,856); rice not in the husk 2,755 tons, Rs. 2,55,265 (−5,870 tons, −Rs. 10,26,866); cow hides tanned or dressed 639 tons, Rs. 8,80,083 (−175 tons, −Rs. 9,96,382); goat skins, tanned or dressed 188 tons, Rs. 8,94,427 (−24 tons, −Rs. 4,47,005); castor seeds 2,874 tons, Rs. 3,46,123 (−4,174 tons, −Rs. 8,77,761); ground-nuts 15,789 tons, Rs. 21,18,123 (−10,211 tons, −Rs. 28,81,304); piecegoods coloured, printed or dyed 1,473,688 yds., Rs. 6,26,115 (−977,108 yds., −Rs. 4,48,112); other articles, Rs. 74,67,038 (−Rs. 7,50,191).

INDIAN CUSTOMS REVENUE.

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of April 1933, amounted to Rs. 3,96 lakhs as against Rs. 4,61 lakhs in the preceding month and Rs. 4,39 lakhs in April 1932. To this import duties contributed Rs. 2,88 lakhs, export duties Rs. 24 lakhs, excise duties on motor spirit Rs. 55 lakhs and on kerosene Rs. 25 lakhs and land customs and miscellaneous Rs. 2 lakhs. Increases were noticeable in import duties on cotton piecegoods, silk and artificial silk piecegoods, wood pulp and motor spirit, and in excise duties on motor spirit and kerosene. On the other hand import duties on kerosene, raw cotton, sugar, iron and steel, artificial silk yarn and thread, cotton yarn and thread, tobacco, betelnuts and machinery and export duties on jute, raw and manufactured and land customs receipts showed noticeable decreases. The protective special duties on private imports during April 1933, aggregated Rs. 1,07 lakhs. The duties on Government stores, inclusive of protective duties collected thereon, amounted to nearly Re. 1 lakh, as compared with Rs. 3 lakhs in the corresponding period of the preceding year.

Extracts from Directors' Report:

Report for Season 1932.

Crop.—The outturn has been 2,284 maunds as compared with an estimate of 2,250 maunds and an actual crop of 2,095 maunds in 1931.

A satisfactory standard of manufacture was maintained throughout the season and the teas were rather above the average for the district, but on a depressed market a price of only 4 annas 6 pies a lb. was realized for the crop as opposed to 6 annas 5 pies a lb. obtained for last year's teas.

Area.—No extensions were put out during the year, and the area under cultivation remains at 416 acres as previously reported.

Accounts.—The receipts amounted to Rs. 51,142-4-5 and the expenditure to Rs. 84,551-10-6, showing a balance at debit of Revenue Account of Rs. 33,409-6-1. Adding to this:—Balance brought forward from previous year Rs. 31,531-13-8, Subscriptions to Octavius Steel & Co., Ld., Provident Institution Rs. 324, total Rs. 31,855-13-8, there is a balance of Rs. 65,265-3-9 at debit of Profit and Loss Account which is carried forward.

The Estimates for Season 1933, are for a crop of 1,850 mds. to cost Rs. 59,372.

Labour.—576 hands were employed on the garden at 31st December, 1932. Octavius Steel & Co., Ld., Managing Agents. Calcutta, 4th May, 1933.

Total ...	9,65,657	Total ...	9,65,657

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Plant, Machinery and Buildings have been maintained in good order. Health of workmen was good.

The result of the year's trading has been disappointing in consequence of a lack of public contracts. Efforts have, however, been concentrated on building up ordinary sales and these show a steady increase.

For the current year the Company has secured a part of the Indian Stores Department and Railway Contracts, which will cover a considerable amount of the standing charges of the Factory and leave a greated margin of profit on other sales.

Messrs. Hadfields (Merton), Ltd., and the Managing Agents have again agreed to forego interest on their respective Loan Accounts and Debentures for the current year.

Accounts. After providing for all charges, and for full Depreciation amounting to Rs. 28,381 the loss on the year's working amounts to Rs. 70,962-4-5.

The previous year's accounts showed a debit balance of Rs. 2,78,764-4-5 and adding the loss for the year 1932, the amount at debit of Profit and Loss Account now stands at Rs. 3,49,726-8-10.

Sir Darcy Lindsay being away from Calcutta has not signed the Report and the Accounts. R. N. Mookerjee, H. Hobbs, S. Hodson, T. Leslie Martin, Directors. Calcutta, 1st May, 1933.

BOMBAY GAS CO., LD.

Profit for 1932, £21,994 (against £22,331), which added to profit on exchange £5,790 (£4,648), and £39,033 brought in, makes £66,817. After interest, interim dividend, addition of £2,003 to reserve (£1,908) and £398 to renewal and contingency fund (£379) there remains £52,919. Final dividend 4½ per cent. (less tax), again making 8 per cent., forward £39,419.

RAJAHBHAT TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,00,000	Block ...	3,25,446

Profit ...	15,165	Suspense ...	1,836
		Investments ...	13,457
		Cash balance ...	99,088
Total ...	5,59,303	Total ...	5,59,303

Extracts from Director's Report:

Accounts for the year ended December 31, 1932 shows that the season's working has resulted in a loss of Rs. 13,722. After allowing for the short fall on the estimated value of the balance of the 1931 crop amounting to Rs. 7,076, providing for staff provident fund, and transferring Rs. 32,000 from working capital, there remains a balance at credit of profit and loss account of Rs. 15,164, which they recommend should be dealt with as follows:—Pay a dividend at the rate of 5 per cent. per annum, absorbing Rs. 15,000; carry forward Rs. 164. The crop weighed out at 8,885 maunds against an estimate of 7,600 maunds and realised an average price of 5 annas per pound in Calcutta and 6.75d. per pound in London. Following a drought at the commencement of the year climatic conditions were favourable and the estimated crop was exceeded. Teas of a satisfactory quality were made and the reduced sale prices were entirely due to the depressed state of the market. The estimate for season 1933 provides for a crop of 7,219 maunds, which it is calculated will be allowed under the restriction scheme, at a total expenditure of Rs. 1,98,780, the equivalent of 5.5 annas per pound.

DEHRA DUN TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	8,78,000	Block (nett) ...	8,37,393

		Investments ...	1,27,981
		Cash balance ...	36,263
Total ...	11,62,406	Total ..	11,62,406

Extracts from Directors' Report:

Annual report and accounts for the season 1932 show that the profit for 1932 has increased by Rs. 29,354 over the previous year. The outturn of tea for the season 1932 was:—Hurbunswala 153,744 pounds, Arcadia 178,589 pounds, total 332,333 pounds. The crop with the exception of a small quantity of black tea for local sales has been sold at an average price of annas 6 per pound against 5 annas for 1931. The estimates for 1933 provide for a crop of 500,000 pounds to cost Rs. 1,37,800. The nett profit after deducting managers' commission is Rs. 38,311 which they recommend should be dealt with as follows:—To payment of income-tax which will be about Rs. 3,000; to a bonus to the garden labourers which will take Rs. 2,250; and a dividend of 4 per cent. which will absorb Rs. 35,120. After making the first two payments there will be an amount of about Rs. 2,500 short for the dividends which it is proposed to make up from the equalization fund.

EAST HOPETOWN ESTATE COMPANY.

Synopsis of Balance Sheet:

		Cash and other balances ...	52,621
Total ..	3,54,347	Total ...	3,54,347

Extracts from Directors' Report:

Annual report and accounts for the season 1932 show that the profit for 1932 has increased by Rs. 14,448 over the previous year. The outturn of tea for the season 1932 was 159,963 pounds. The crop with the exception of a small quantity of black tea for local sales has been sold at an average price of annas 6 against annas 5½ for 1931. The estimates for 1933 provide for a crop of 250,000 pounds to cost Rs. 62,000. The nett profit after deducting manager's commission is Rs. 18,105 which they recommend should be dealt with as follows:—To payment of dividend at 7 per cent. Rs. 13,440; income-tax will absorb about Rs. 1,800 and a sum Rs. 1,260 is required as a bonus to the garden labourers. The balance remaining to be put to general reserve.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED.

Synopsis of Balance Sheet:

Liabilities.	£.	Assets.	£.
Capital ...	3,404,580	Block ...	5,967,532
Deposits ...	173,141	Stores ...	161,208
Reserves and other funds ...	3,063,528	Outstandings ..	108,675
Unpaid dividends	27,651	Sundry debit balances ...	7,880
Debts ...	97,669	Investments ..	985,681
Profit ...	238,855	Cash balance ...	374,448
Total ...	7,005,424	Total ...	7,005,424

Extracts from Director's Report:

Annual statement of accounts and balance-sheet of the company, for the year 1932, shows that during the year 185,134,324 units of electrical energy were sold, compared with 177,752,613 units in 1931. The number of houses connected at December 31 was 38,328 compared with 35,637 at the same date in 1931, an increase of 2,691. Another year of general depression prevented any recovery in the industrial load; but the domestic demand showed a moderate improvement, though the reduction in the flat-rate in the middle of 1931 has kept down the return of revenue. Working costs have been lowered, partly by a policy of strict economy and partly by greater fuel efficiency. The profits for the year 1932, as shown by the nett revenue account, after making adequate allowance for depreciation, amount to £440,988 add balance brought forward from 1931, £39,674: total £480,662. Out of this the necessary deductions have been made for interest and dividends, etc., paid and accrued during the year, as follows:—Debenture interest, £27,500; preference dividend, £62,857; dividend on ordinary shares (5 per cent. actual) for the half-year ended June 30, 1932, paid in November, 1932, less income-tax, £78,950; sinking fund on debentures, £12,500; reserve for taxes, £60,000. They recommend that the balance of £238,855 be dealt with as follows:—Transfer to reserve fund, £50,000; transfer to premises account, £10,000; transfer to insurance fund, £2,000; transfer to retiring gratuity fund, £8,000; payment of final dividend on the ordinary shares of 7 per cent. (actual), making 12 per cent. for the year, less income-tax, £110,531; payment of bonus of 2d. per share on the ordinary shares less income-tax, £13,158; reserve against reduction of charges, £10,000; leaving a carry forward of £35,166. It is proposed to grant to the staff in India a bonus equivalent to 2 per cent. of the Indian nett profit, in respect of approved service actually rendered in the year 1932.

STANDARD JUTE CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	23,00,000	Block (nett) ...	11,74,491
Reserves ...	12,53,351	Jute ...	13,00,317
Debts ...	5,96,788	Cloth & Bags ...	2,22,833
Profit & Loss ...	2,22,600	Stores & Spares ...	1,75,726
		Outstandings ...	2,60,811
		Cash & Invests. ...	12,38,561
Total ...	43,72,739	Total ...	43,72,739

Extracts from Directors' Report:

Report for the half-year ended 31st March, 1933, show that after writing down the value of Jute Stocks by Rs. 1,00,000, there is a loss on Revenue Account of Rs. 4,689-1-8 and a balance at credit of Profit and Loss Account of Rs. 2,22,600-3-5, which includes Rs. 1,08,812-15-1 brought forward from the last half-year and Rs. 1,00,000 transferred from Equalization of Dividend Fund.

The Directors propose to dispose of this as follows:—In paying a Dividend on the Preference Shares at the rate of Rs. 6 per cent. per annum, free of Income Tax, Rs. 27,000, in paying a Dividend on the Ordinary Shares of Rs. 7-8 per share, free of Income Tax, Rs. 1,05,000, in carrying forward Rs. 90,600-3-5, total Rs. 2,22,600-3-5.

The Jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with Agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

Owing to the exceptional world-wide trade depression the past half-year has again proved to be one of great difficulty. The poor demand for manufactured goods mentioned in our last Report continued and profitable business was difficult to obtain. The Directors considered it advisable to write down the value of Jute Stocks by Rs. 1,00,000, to assist the forward trading position.

The Mill's working was interrupted by a strike which lasted for six weeks; most of the time lost has been made up during the half-year.

The additions to Electric Light Installation represent the cost of re-wiring part of the Mill premises.

Report for the half-year ended 31st March, 1933. After writing down the value of Jute Stocks by Rs. 1,50,000, there is a loss on Revenue Account of Rs. 5,530-11-9 and a balonce at credit of Profit and Loss Account of Rs. 1,21,942-14-6, which includes the sum of Rs. 29,214-10-11 brought forward from the last half-year and Rs. 1,50,000 transferred from Reserve Fund.

The Directors propose to dispose of this as follows:— In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent. per annum, free of Income Tax, Rs. 35,000, in paying a Dividend on the Ordinary Shares of Rs. 2-8 per share, free of Income tax, Rs. 50,000, in carrying forward Rs. 36,942-14-6, total Rs. 1,21,942-14-6.

The Jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with Agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

The Directors considered it advisable to write down the value of Jute Stocks by Rs. 1,50,000, to assist the forward trading position.

The additions to Machinery represent the cost of new weighbridge.

The Directors considered it advisable to write down the value of Jute Stocks by Rs. 1 75,000, to assist the forward trading position.

MOTOR UNION INSURANCE CO., LD.

Accounts for 1932 shows that net premium income for 1932 was £1,761,668, against £1,782,520 for 1931. Claims paid amount to £967,607 (against £1,001,738) and £538,168 (against £503,046) has been reserved to meet outstanding claims. Commission and management expenses amount to £770,445 (against £735,034). Overseas business has been converted at market rates of exchange, and to meet exchange adjustments in respect of business written prior to 1932 £127,453 of the amount provided for the purpose in 1931 has been carried to the revenue accounts. The net result is a balance to the credit of profit and loss account of £199,014 (against £171,648). A final devidend of 14 per cent. is proposed on the Ordinary shares, making 20 per cent. for the year (unchanged), and £161,814 (against £134,448) is transferred to general reserve.

			Cash	...	1,945
			Profit & Loss	...	1,07,455
Total	...	17,84 619	Total	...	17,84,619

Extracts from Directors' Report:

Report for the half-year ended 28th February, 1933. The loss for the half-year was Rs. 12,626-2-7 and this, added to the loss brought forward from the previous half-year, viz., Rs. 94,829-9-9, increases the loss to be carried forward to Rs. 1,07,455-12-4.

Sales for 1933 are disappointing, totallina less than 50 per cent. of the output capacity of 15 Seam alone. This is largely owing to our having failed to secure our usual share of the State Roilways' contracts. Steps have been taken to restrict workings accordingly and 17 and 18 Seams have therefore been closed down, the plant withdrawn, and these mines temporarily abandoned as being unprofitable to work.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Accounts.—The seasons's working shows a profit of Rs. 16,937-6. After providing for Commissions, Staff Provident Fund, deducting the short fall on the estimated value of 1931 crop, and transferring Rs. 10,000 from Working Capital, there remains a balance of Rs. 16,945-0-2 at credit of Profit and Loss Account, which we recommend should be dealt with as follows:—Pay a Dividend at the rate of 5 per cent. per annum, absorbing Rs. 15,000, carry forward Rs. 1,945-0-2, total Rs. 16,945-0-2.

Crop.—The crop weighed out at 11,566 maunds 49 lb. against the estimate of 10,000 maunds and was disposed of at an overage price of 5.19 annas per pound in Calcutta and 8.91d. per pound in London. Satisfactory teas were made and the depressed state of the market is entirely responsible for the reduced sale prices.

Season 1933.—The Estimates provide for a crop of 9.394 maunds, which it is anticipated will be allowed under the restriction scheme, at a cost of Rs. 2,55,565, the equivalent of 5.441 annas per pound.

General.—Except for a drought at the beginning of the season, climatic conditions were favourable and a crop considerably in excess of that estimated was gathered.

AMALGAMATED COALFIELDS, LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	10,68,060	Block (nett)	...	11,85,002
Reserve	...	3,50,000	Stores	...	35,039
Debts	...	1,39,907	Outstandings	...	2,00,757
Profit & Loss	...	63,122	Cash & Invests.	...	2,00,291
Total	...	16,21,089	Total	...	16,21,089

Extracts from Directors' Report:

Report for the half-year ended 31st March, 1933.

The working for the half-year shows a gross profit of Rs. 1,60,016-12-4, to which has to be added the amount brought forward from last half-year Rs. 4,985-15-2, making a total of Rs. 165,002-11-6. After providing for Depreciation Rs. 41,480-14-8, Reserve for Taxation and Managers' Commission Rs. 30,400 General Reserve Rs. 30,000, total Rs. 1,01,880-14-8, there remains a balance of Rs. 63,121-12-10 which we recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 10 per cent. per annum free of Income-tax Rs. 53,403, leaving to be carried forward Rs. 9,718-12-10.

Output and despatches of Steam and other grades of coal as compared with the two preceding half-years were as follows:—

Half-year ending 31st March, 1933, Output 170,865 tons, Despatches 172,079 tons, half-year ending 30th September, 1932, Output 145,510 tons, Despatches 146,628 tons, half-year ending 31st March, 1932, Output 147,657 tons, Despatches 145,879 tons.

Working Results.—Despatches during the half-year show a considerable improvement, but owing to the curtailment of working hours by Cotton Mills on the West of India, it is doubtful if demand will be so brisk during the current half-year.

The Company has again secured a satisfactory contract from the State Railways for the current year.

ATAL TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,25,000	Block	...	2,40,201
Debts	...	1,25,612	Crop A/c.	...	19,707
			Outlay	...	6,338
			Outstandings	...	8,345
			Cash & Invests.	...	15,996
			Profit & Loss	...	59,935
Total	...	3,50,612	Total	...	3,50,612

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Accounts.—The season's working shows a loss of Rs. 32,647-9-8, which has been transferred to Profit and Loss Account. Taking into consideration the debit balance brought forward from 1931, there remains a debit balance of Rs. 59,935-4-7 to be carried forward.

Crop.—The crop weighed out at 4,294 maunds 75 pounds against an estimate of 3,700 maunds and was disposed of at an average price of 4.67 annas per pound in Calcutta.

Good Teas were made and the decline in the market was entirely responsible for the reduced sale prices.

General.—A severe drought prevailed at the beginning of the season, but the after-break of the Monsoon climatic conditions were good for growth.

Season 1933.—The estimate provides for a crop of 3,489 maunds, which it is calculated will be allowed under the restriction scheme, at a cost of Rs. 1,17,650, the equivalent of 6.73 annas per pound.

UNION JUTE CO., LD.

Extracts from Directors' Report:

Report for the half-year ended 31st March, 1933. After writing down the value of Jute Stocks by Rs. 3,00,000, there is a loss on Revenue Account of Rs. 1,47,868-6-5 and a balance at credit of Profit and Loss Account of Rs. 1,85,957-6-6, which includes Rs. 96,888-4-2 brought forward from the last half-year and Rs. 3,00,000 transferred from Reserve Fund.

Your Directors propose to dispose of this as follows:—In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent. per annum, free of Income Tax, Rs. 21,000, in paying a Dividend on the Ordinary Shares of Rs. 7-8 per share, free of Income Tax, Rs. 90,000, in carrying forward Rs. 74,957-6-6, total Rs. 1,85,957-6-6.

The Jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with Agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

The Directors considered it advisable to write down the value of Jute Stocks by Rs. 3,00,000, to assist the forward trading position.

Results have been seriously affected by a strike at the South Mill which lasted for six weeks, the Mills being closed down for half of February and the whole of March.

Tht additions to Buildings represent cost of rebuilding staff quarters at the North Mill. The additions to Machinery represent the cost of a Water Softening Plant at the South Mill.

Total ...	43,54,940	Total ...	43,54,940

Extracts from Directors' Report:

Accounts of the half-year ended 30th April, 1933, shows a loss of Rs. 5,299-3-6.

After transferring Rs. 1,00,000 from Dividend Equalization Reserve and making sundry adjustments, there is a balance at credit of Profit and Loss Account of Rs. 1,19,448-11. The Directors recommend dividends on Preference shares at Rs. 3-8 per share Rs. 31,500, and on Ordinary shares at Rs. 5 per share Rs. 60,000 the balance Rs. 27-948-11 to be carried forward.

A profit of Rs. 2,06,615-14-6 was realised by the sale of Government Securities and this amount has been utilised to write down the price of jute stocks.

Addition to Block represents land purchase.

In accordance with the agreement of the Indian Jute Mills Association, the mills have worked 40 hours per week, with 15 per cent. of the total looms silent.

KINNISON JUTE MILLS CO., LD.

		Cash & Invests. ...	37,67,270
Total ...	90,14,407	Total ...	90,14,407

Extracts from Director's Report:

Report for the half-year ended 31st March, 1933. After writing down the value of Jute Stocks by Rs. 50,000 and allowing for Interest, Commissions, etc, there is a profit of Rs. 2,29,175-15-9. To this has to be added the balance of Rs. 5,12,600-11-3 brought forward from last half-year and Rs. 50,000 transferred from Equalisation of Dividend Fund, making a total of Rs. 7,91,776-11.

The Directors propose to dispose of this as follows:—In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent. per annum, free of Income Tax, Rs. 52,500, in paying a Dividend on the Ordinary Shares of Rs. 12-8 per share, free of Income Tax, Rs. 1,87,500, in carrying forward Rs. 5,51,776-11, total Rs. 7,91,776-11.

The Jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with Agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

Owing to the exceptional world-wide trade depression the past half-year has again proved to be one of great difficulty. The poor demand for manufactured goods mentioned in our last Report continued and profitable business aws difficult to obtain. The Directors considered it advisable to write down the value of Jute Stocks by Rs. 50,000, to assist the forward trading position.

The Mill's working was interrupted by a strike which lasted for six weeks; most of the time lost has been made up during the half-year.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932. After taking into account interest charges amounting to Rs. 6,43,758 the result shows a loss of Rs. 1,50,932. The Directors regret the loss which was chiefly due to the abnormal trade depression which continued throughout tht period under review. The loss would have been somewhat more had it not been for the help rendered to the Company by the Cotton Brokers and the Cloth Selling Agents who have foregone half their brokerage and commission earned during the year. The Managing Agents, Messrs. Tata Sons, Ltd., have given up their commission of Rs. 23,300 which under the Agency Agreement, they were entitled to charge, as also their Office Allowance of Rs. 9,970 and the Directors have charged no fees for the meetings.

The thanks of the Company are due to all of them for the sacrifices made by them year after year.

The Company's Buildings, Machinery and Stocks have been insured for Rs. 91,68,700.—N. B. Saklatvala.

GOUREPORE CO., LD.

Extracts from Directors' Report:

Report for the half-year ended 31st March, 1933.

The Profit on Revenue Account is Rs. 2,15,676-0-9, Add—The Balance brought forward at credit of Profit and Loss Account Rs. 1,52,451-3-2. Dividends forfeited Rs. 500, the Dividend from the Gourepore Electric Supply Co. Ltd., Rs. 67,000, total Rs. 2,19,951-3-2, leaving at credit of Profit and Loss Account Rs. 4,35,627-3-11, your Directors recommend that this be disposed of:—By payment of a Dividend on Preference Shares at 6 per cent. per annum, free of Income Tax Rs. 79,500, by payment of a Dividend on Ordinary Shares at 10 per cent. per annum, free of Income Tax Rs. 1,20,000, total Rs. 1,99,500, leaving to be carried forward at credit of Profit and Loss Account Rs. 2,36,127-3-11.

The stocks of Jute and Linseed have been entered at or under cost prices and that of fabrics at contract rates.

The Company's Mills continue on the single shift system and in accordance with the Indian Jute Mills Association's Agreements worked 40 hours per week with 25 per cent. of Hessian Looms sealed.

NORWICH UNION LIFE INSURANCE SOCIETY.

The report states that the net new business for 1932 amounted to £8,009,710, against £8,249,645 for 1931. The total insurances in force amount to £99,945,833. The income for the year was £5,794,441 (against £5,525,667) and the outgoing (including provision for every outstanding claim) £3,902,071. To the difference of £1,892,370 is added £172,415 to adjust the rupee to the par of exchange in India, constituting a total increase of £2,064,785 in the funds, which at the close of the year amounted to £36,607,864. The net interest, dividends, etc., received during the year amounted to £1,669,932 (against £1,648,563), the return on the mean funds, including all unproductive assets, £4 15s. 11d. (against £4 19s.) per cent. net. The amount of the Scottish Imperial fund at the close of the year was £229,790, making a total for the two funds of £36,837,654.

During the year 1,198 policies, insuring £956,104 (including bonuses), became claims by death, which amount has been shown by the usual mortality investigation to be £436,010 less than the sum expected. The ratio of actual to expected claims was 69 per cent. (against 70 per cent.). Claims by survivance numbered 3,554 for £1,298,731.

The expenses ratio showed a decline for the fifth successive year, being 13.80 per cent. (against 14 per cent. for 1931).

WORLD OF INDIAN FINANCE

Friday, May 26.

At ½ per cent., call money went abegging, with no takers. Sales of sterling for substantial amounts in the previous week and for a moderate amount in the current week, excess of Treasury Bills Maturities over renewals, release of funds from giltedge loans made to dealers and operators of various kinds—these account for a rapid accumulation of funds in banking circles. While there has been heady inflow of money, the scope for suitable remunerative investment continues limited. The weekly offer of Treasury Bills is confined to Rs. 1 crore ; and on quite a few occasions it has happened that the full quota is not taken up. Government securities as an outlet for the surplus resources of banks are now in such disfavour. No banker would dream of touching them with a hundred foot pole. It will take a considerable time before a change in market's psychology in this regard takes place. Nor have the rising prices of jute and hessian afforded any opportunity for the putting out of finance. The bazar is well able to supply all the requisite funds. Even if there should be a substantial increase in the turnover in jute and hessian markets, there is no reason to suppose that this would cause any great drain on banks. Jute crop has to be moved at a time of the year when no other crop is ready. In fact, the movement of jute occurs in the latter half of the slack season. For this reason, jute finance has for all practical purposes, made no difference to the money market proper. By all tokens, there should be no change in this phase of jute finance in the current season. An appreciation of the factors referred to here lead us to infer that the only avenue of investment acceptable to bankers for this class of funds would be Treasury Bills. Presumably, the Government do not want to increase the limit of the weekly offer of Treasuries or to introduce intermediate bills mainly because of their apprehension that a bigger drain thereby caused would have an adverse effect on giltedge prices at a time when nothing should be done to cause further disturbance. For our part, we believe that the apprehensions of the Government are needless. A certain proportion of the resources of banks and like institutions is clearly and exclusively earmarked for Treasury Bills. If there is a sufficient volume of Treasuries available, bankers would be happy to avail themselves fully of the opportunity. If the available quantity of Treasury Bills is on the small side, bankers would rather keep the surplus cash on their hands or keep it invested in short-term interbank deposits amongst themselves. The money so kept apart for Treasury Bills can be diverted only to the financing of trade, if and when there is a revival of trade and the parties needing finance are acceptable to the banks. The rival of Treasury Bills is not giltedge, but finance caused by increasing activity in trade markets. So long as trade continues to be poor, the authorities need not, from any undue solicitude for giltedge, feel reluctant to introduce intermediate Treasuries. As was suggested in these columns last week, the time has arrived for a change in Treasury Bills operations.

The statement of the Imperial Bank for the week ended May 19, shows, as was anticipated by us, a ways and means advance of Rs. 4 crores was availed of by the Treasury from the Bank. Early in June, Treasury Bills Maturities would account for Rs. 1½ crores. The usual month-early disbursement would also require another Rs. 2 crores. That is, by the last week of June, ways and means advance should mount up to Rs. 8 crores or thereabouts. The total Treasury Bills Maturities in June amount to Rs. 8 crores. On the present basis of weekly offer being Rs. 1 crore, sales of fresh Bills would come to only Rs. 4 crores. How long is this position of heavy indebtedness on ways and means account to continue? Ways and means losses must be treated as a purely temporary devise. From this point of view, we are in favour of such changes in Treasury Bills policy as would enable the Government to balance their incomings and outgoings. Three months Bills have clearly over-stayed their welcome. Introduction of six months and/or nine months Bills is clearly indicated. Equally is it clear that the weekly offer should be increased from the present limit of Rs. 1 crore. Nor is there any reason why the Government should fight shy of inaugurating intermediate Treasuries. We would suggest as from the first or second week of June, the weekly offer is increased to Rs. 1½ crores or Rs. 2 crores made up of three months Bills and six months Bills. We would also propose that a tap-rate for six months Bills should be fixed. At the moment weighing the relative attractiveness of six and nine months Bills, we are inclined to prefer six months Bills. Nine months Bills would mature in February, and bankers would like to have

their funds released earlier as February constitutes the height of the busy season. In relation to June six months Bills would form an ideal security for the bankers. The maturity dates would just suit their balance sheet position as well as their plans for financing of the busy season. Towards the middle of July, if six months Bills had brought in sufficient realisations, it may be possible to reduce the weekly offer and to discontinue intermediates. In that case no question will arise of the advisability or otherwise of nine months Bills.

We should think that both from the point of view of utilisation of the funds accumulated and accumulating in India, and from the point of view of the remunerative employment of London funds, six months Bills should prove instantaneously successful. For a good few months, exchange banks have been more or less uninterested in short-term Bills. At an yield of roundabout 1¼ per cent. it is only Indian banks and other domestic investment institutions that have taken up the lion's share of Treasury Bills. The inauguration of six months' Bills would cause a revival of interest on the part of exchange banks in Rupee Treasury Bills. On the side of the Government, they would naturally be prepared to pay a higher interest for six months Bills than they have been doing for three months accommodation. We may, therefore, witness a resumption of the flow of short-term funds from London to India. As, however, the total floating debt would in no case be increased beyond Rs. 30 crores or so, the opportunity for investment of foreign funds is limited. But the main fact to be emphasised here is that Treasury Bills as a factor in exchange would again begin to have significance.

We would repeat that, whether viewed in relation to the investment of surplus resources available in India, or in relation to the utilisation of foreign funds, a larger drain caused by more substantial sales of Treasury Bills should have no effect of an adverse nature on the giltedge position. It is, of course true that the giltedge market is extremely sensitive at the moment. It responds quickly enough to bearish factors. It is for this reason that the weaker tone of India's sterling stocks is having an almost exaggerated effect on the price of Rupee securities. It is noteworthy that till last December, Rupee securities were following sterling securities; that between January and April, Rupee securities asserted their independence over sterling securities; and that, once again, Rupee stocks have come to be tied to the apron strings of sterling stocks. In a period when the psychological factors in the Indian market are propitious, prices here are not dependent upon the fluctuations in London. When market sentiment gets demoralised, as is now the case, any bearish factor has extra telling effect. If, therefore, a more healthy life is to be imparted to the giltedge market, it would be necessary to strengthen giltedge in London as well as in India. If it was only the Indian market that had to be looked after, the Finance Member and the Controller of the Currency could, between them, chalk out a plan of action. When the London market has also to be tackled, the co-operation and assistance of the Secretary of State has to be evoked. The India Office is pretty contankerous in its ways. And while it expects strict adherence to its commands on the part of the officials in India, it is scarcely responsive to the appeals made from this quarter. In the present situation, when operations in the London market are as significant as operations here, the existing machinery of the Government is not quite able or competent to cope with it. It is, however, some satisfaction that Sir Osborne Smith is now in London, and that he should himself feel concerned about the severe reaction in giltedge prices. His bank's holdings in Government securities is Rs. 39 crores, of which scrips like 3½ per cent. paper, 4 per cent. 1960-70 and 3½ per cent. New Loan might be anything like Rs. 9 crores. Of this Rs. 9 crores, a good part must represent the scrips bought in this half-year. It would make all the difference to his balance sheet if giltedge prices can be raised by June 30, to a satisfactory level. If this is not done, Sir Osborne will find that, whatever has been made by banking profit is swallowed up by the depreciation in the value of securities bought in the current half year. A shrewd operator like him watching the London market on the spot could be relied on to take such action as would save banks from an awkward situation in their half-yearly accounts.

Exchange slipped away by a point owing to the extreme glut of money. Credits were in such abundance as to push down the rates to ½ per cent. and still borrowers were uninterested. A few export bills appeared on the market but not in the same volume as in the earlier two weeks. On the weekly sterling tender day tenders to the amount of £385,000 at 1s. 6 1/16d., were received and allotted in full.

The closing rates are: 1s. 6 1/32d., May-September T.T.; and 1s. 6d., October-December T.T.

Bills may be quoted: 1s. 6⅛d., up to August and 1s. 6 7/64d., September to December.

Money has been extremely easy with ½ per cent. as the nominal rate for interbank call money. Union rates are ¾ per cent. for call, three days and seven days notice; one month deposit quoted 1 per cent., two month 1¼ per cent. and three month deposit 1½ per cent.

OTHER INDIAN MONEY MARKETS

(*By Wire*).

(From Our Correspondents).

Bombay. Money has been distinctly easier and at the close practically unlendable. Interbank call money is nominally quoted 1 per cent.

Exchange market is quiet, banks selling T.T. at 1s. 6 1/32d. up to July, 1s. 6d. up to October, 1s. 5 1/32d. November-December.

Karachi. Exchange has been easy. There are sellers of ready T.T. at 1s. 6 3/64d. ; June-July at 1s. 6 1/32d. ; August-September at 1s. 6d. There are also small buyers at 1s. 6 1/16d. for May June.

Three months bills are quoted 1s. 6 1/8d. up to Mid-June and 1s. 6 7/64d. second half of June.

The weakness in exchange is due to shrinkage in export bills and easy money.

The money market is fully saturated with funds, call money being freely available at or under one per cent.

FINANCE ABROAD.

EXCHANGE EQUALISATION FUND AND AMERICA'S ACTION.

The end of last week saw the formal enactment of the Exchange Equalisation Account Bill which enables the increase of the Exchange Equalisation Fund from £150 million to £350 million. After its passage through both the Houses of Parliament, despite Labour opposition, it was presented to the King for the royal assent and the bill is now law as from May 18th. One's thoughts naturally turn now to the American counterpart of the Exchange Equalisation Account. Though it is certain that the authorities in America are anxious to have the special machinery and specially ear-marked funds for operations on behalf of the dollar no legislation has yet been passed to allocate to the authorities specific amounts for the purpose of intervening in the foreign exchange market. From this, it is not valid to conclude that no operations have been made or will be made in the future till the formal statutory sanction is obtained. In the case of Great Britain though the Exchange Equalisation Fund was first instituted at the time of last year's budget, the Bank of England had carried on operations in sterling with the aid of its own resources. A similar course is certainly open to the Federal Reserve authorities without involving a contravention of its statutory powers. The question, therefore, arises whether the American authorities might not try to obviate the institution of a regular fund or, at any rate, to forestall it by carrying on operations either through the Federal Reserve Bank of New York or through the big American banking institutions. It may be recalled that on the earlier occasions, in which the dollar was subjected to attacks from abroad, it was mostly the Paris offices of the three big banks, the Guarantee Trust Company, the National City Bank of New York and the Chase National Bank, which were in charge of the official operations. The transactions were on a large scale and a similar expedient may be resorted to in the present occasion also. Financial opinion in London is inclined to think it unlikely that the Federal Reserve Bank of New York would be entrusted with the task of executing the foreign exchange policy of the nation. For, in the first place, the bank is not equipped for this kind of work. If it is remembered that even in the case of the Bank of England, the foreign exchange department at the time the "Control" was first instituted was of a highly primitive character and that the technique of control to-day was acquired and perfected at the cost of numerous and costly blunders, it may easily be understood that the Federal Reserve Bank of New York would fight shy of taking up this work and equally that the Government would not feel confident of its ability to discharge it. Speaking of technical ability, one is reminded of the repatriation of foreign business back to London after the unsettlement caused by the war and by the delay in England's return to the gold standard. This was possible mainly because American bankers had failed to master the intricate technique of foreign exchange operations. We have not learned to think that in America a change has occurred since then and it is, therefore, possible that when attempting to make any big or impressive beginning the Government might revive the old expedient of entrusting the Paris and London offices of the big banks with the transactions it may seem fit to put through. As a matter of fact, it is reported that during Air Mail week, the foreign exchange market in London was able to see in some of the transactions of American banks the hand of the American Government itself. Whether or not this conjecture is correct, it is certain that the American Government have not started operating on a big scale on behalf of the Exchange Equalisation Account, which, nevertheless, is undoubtedly in project.

We have observed on an earlier occasion that, should America embark on a policy of control, similar to that obtaining in London, some degree of mutual understanding between the two accounts would be essential to their successful functioning. But should there be failure to arrive at such an agreement, it is significant that London is in a far better position for an exchange war than other countries. The increase in the Exchange Equalisation Fund from £150 million to £350 million is in itself a source of great strength. To this has to be added the amount of £27 million formerly held in dollar account and now available for this purpose. In addition, the gold resources of the

Bank of England have been steadily going up during the last few months.

Gold Purchases and its bearing on Gold Standard.

The trials of other currencies have proved the opportunity of the Bank of England to acquire all the gold which it had lost in its futile attempts to defend sterling in the days prior to the abandonment of the gold standard in September, 1931. And since the banking crisis in America and the subsequent abandonment of the gold standard for purely political reasons without the vestige of any valid economic justification, the fear that other countries might be obliged or be tempted to do the same has been on the increase. Even the franc is sometimes subject to speculative attacks, which are feeble only because the gold holdings of the Bank of France are more than sufficient to protect the franc, if the authorities are determined to do it. But the fact is that the fear of depreciation is more on account of the political reasons than because that any particular country would be obliged, under pressure of extraneous factors, to abandon the gold standard. But whatever the reason, there is good cause to believe that none of the world's currencies is altogether secure from further depreciation. The management of currency and credit is Great Britain since the abandonment of the gold standard has been such that foreign investors could well command faith in sterling and in the ability and willingness of the authorities in London to maintain a free market for gold and the integrity of the currency at its present level.

Imports of Gold induced by Premium on Franc parity.

In the past three weeks, imports of gold into Britain have amounted to £23 million while exports have only slightly exceeded £2 million. These imports have come mostly from countries on the gold standard and are inspired only by the faith in sterling. In other words, the owners have more faith in the safety of deposits made in London than in their own countries. The import of gold into England has been helped to some extent by the premium on gold in the London market over the price justified by the franc parity, the price of gold being fixed on the franc as the most stable gold currency. But the precise meaning of this premium is not fully appreciated on all hands. It is often assumed that this premium is calculated on the pure arithmetical exchange parity, whereas the basis is what is known as the "arbitrage" parity which involves an allowance for expenses of shipment. The issues connected with this phenomenon of a premium on gold in the London market over the price justified by the franc parity has been explained by a writer in the *Financial News* of May 11th; and the following extract will be read with interest as explaining an intricate point of great importance :

"In the Bullion market, the exchange parity price of gold means that price which a buyer could just afford to pay and yet make a profit by transporting the gold to Paris and delivering it to the Bank of France. Any excess over this price is known as the "premium."

The point can be illustrated on the basis of yesterday's figures, when the premium was at the high record of 1s. 3½d. The actual price "fixed" by the market was 123s. 4d. per fine ounce, so that the parity price was 122s. 0½d., based on an "official" franc rate of 86⅛ at the time of the fixing.

This parity price is calculated by reference to the Bank of France's buying price, divided by the franc exchange at the time of the fixing, less the expenses of shipment, &c., from London to Paris, less a minimum profit. If these expenses amount to 2d. per ounce, then the highest price which arbitrage buyers can afford to pay in London—*i.e.*, the parity price—must be 2d. less than the sterling equivalent of the Bank of France's buying price. The Bank of France's buying price is 16,919.084fr. per kilo of fine gold, which is equivalent to 526.243fr. per fine ounce. Thus, the sterling yield from the sale of one ounce of gold to the Bank of France, with the franc at 86⅛, would be 122s. 2.45d. This sterling equivalent, less the 2d. allowed for expenses, &c., gives the parity price of 122s. 0½d. officially quoted.

The resultant premium is not, of course, equal to the profit which could be made by drawing gold from the Bank of France and selling it in London, for, a bank which attempted such an operation would have to allow for expenses of sending gold from Paris to London, and would, of course, have to pay the Bank of France's selling price of 16,963.528fr. per kilo, equal to 527.625fr. per ounce. As a result, his profit would be over 5d. per ounce less than the London premium. Thus, even in normal times, foreigners who want gold in London, would be prepared to pay at least 5d. over the parity price."

It is clear from this that those who prefer to keep their funds in London would be prepared to pay this premium of 5d. The reason why foreigners should show such preference is that they have the assurance that their deficit will not be touched by the British authorities and would, at the same time, be beyond the reach of the authorities in their own country. In England, too, the Bank of England has no doubt the authority to call in private gold holdings not exceeding £10,000; and recently there has been a demand that as the amount of £10,000 and over can be held by a party in the name of different persons and that in this way a large amount of gold might be kept beyond the reach of the Bank of England, and as it would be administratively impossible to ensure that gold is not held in the names of persons other than its proper owner this minimum limit should be reduced further. These are signs which should normally be considered disquieting to foreign depositors in England. But it may be remembered that in the course of the debate on the Currency and Bank Notes Act it was made clear on behalf of the Government that the Bank of England's right to call in private holdings does not affect foreign holders resident abroad. Nothing has happened to detract from the value of this assurance formally held out on the floor of the House of Commons. The record of the monetary authorities in Britain in respect of allowing to foreign holders their proper freedom of withdrawal of gold has been so unexceptionable in the past that foreigners naturally attempt to take full advantage of it to provide for their moneys a safe refuge in the London market.

While it is true that on the basis of the calculations mentioned in the foregoing paragraph only a premium of 5d. would be justifiable, it is also true that a higher premium has been paid in the last one month and more and this has been testified to by the City Editor of the London *Times*. Any excess over this premium of 5d. has been explained by the writer in the *Financial News* to be due to the reluctance of buyers to withdraw gold from the Bank of France.

Though there is no official ban on the withdrawal of gold, no Frenchman would like to incur the opprobrium attaching to the withdrawal of the metal either for hoarding or for export abroad. Besides, there are other technical difficulties like the impossibility of obtaining gold on the day it is applied for. For these reasons, a nervous Frenchman, anxious to keep his money in London, would be prepared to pay the premium on gold and it is on account of these causes that a substantial premium over and above 5d. had been paid in the London market for a period of nearly a fortnight.

INDIA EQUITABLE INSURANCE CO., LD.
(Estd. 1908).
102, Clive Street,
CALCUTTA.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 88/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 4⅛ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 3 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3¾ per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

CALCUTTA SHARE MARKET.

Jute.—The market fluctuated widely during the period under review. Howrahs opened at Rs. 54-4, and Kamarhattys at Rs. 515 but with an easier Hessian market, prices were marked down to Rs. 53-8 and Rs. 506 the same evening. The hessian market also dropped from Rs. 11-8, the highest touched during last week, to Rs. 10-5 and this accounted for a loss of Rs. 2 on Howrahs, which opened at Rs. 54-5 in mid-week session and quickly receded to Rs. 52-5. Kamarhattys also reacted to Rs. 395. Raw jute also lost Rs. 4 from Rs. 41-8 to Rs. 37-12. Among other bigger denominations, prices were well maintained, notably Anglo-Indias which were steady at Rs. 37. Albions had buyers at Rs. 283, Alliance were wanted at Rs. 335, even Ballys dropped to Rs. 160 on profit taking from Rs. 171 but quickly recovered again to Rs. 168. Barnagores had more sellers than buyers on likelihood of dividend being *nil.* while Cheviots recorded business at Rs. 245 in the beginning, to drop to Rs. 241. Orients were easier by Rs. 4 at Rs. 228. Dalhousies were unchanged at Rs. 395, Fort Williams were placed at Rs. 279, with buyers over, Fort Glosters were steady at Rs. 550, Khardors were wanted at Rs. 480 without many sellers, Kelvins changed hands at Rs. 555, while Gourepores were firm with a strong demand at Rs. 365. We draw the attention of the investors to Alliance, Fort William, Gourepores, Albions, and Ballys which appear cheap roundabout current quotations, with intermediate reactions which are likely and which are necessary for a healthy market. The position appears quite sound. Mills have sold fairly freely 12 months forward at remunerative prices and profits are likely to be better for half-year ending September, 1933. Cautious purchases at every reaction appears advisable.

Cotton.—This section was dull and neglected with very little turnover. Kesorams were unchanged at Rs. 3-11 while Bengal Nagpores had sellers at Rs. 21-8. Elgin Mills recorded a solitary deal at Rs. 44 small lot.

Coal.—The recent activity which was noticeable during the last few weeks was not so marked, though prices were well maintained. Popular stocks like Burrakurs were dull at Rs. 10-8, Bengal Nagpur coal was placed after a long time at Rs. 35, Raneegunge was done at Rs. 30, while Standards changed hands at Rs. 23. Pench Valley was steady at Rs. 30-12 while Seebpores were wanted at Rs. 15-12 premium. Mundulpurs had sellers at Rs. 3-4, Bengals after recent rise to Rs. 220 were easier at Rs. 215.

Miscellaneous.—Burma Corporations were fully dealt at 8-8 and fluctuated according to London advices and rise and fall in prices of silver. Triton Insurance had buyers at 168 with few shares offering. British Ceylon Corporations had a solitary deal at 6-12 while there was enquiry for Howrah Oil at steady prices. Electric and telephone shares were well supported and prices were maintained. Midnapore Zemindary after recent fall to 61 improved to 68 on account of prices of raw jute. Bengal Papers were wanted at 67 while Titaghur Paper had buyers at 14-12. Among shipping concerns Calcutta Landing had buyers at 4-7 without many sellers, while Port Shipping were placed at Rs. 11-10. Sugar shares were well supported while Balarampores had buyers at 12-4. Punjab and Basti Sugars had buyers without many sellers.

Banks & Railways.—Due to slack conditions in security market, bank shares were not so active. Prices were however well maintained. For want of offerings, railway shares were not dealt.

Government Securities.—3½ per cent. after opening quiet at 81-12 improved to 82-6 but again receded to 81-12 with little fluctuations in prices. Calcutta-Bombay business has slackened and professional operators find little to interest them in this section at the moment. 4 per cent. 1960-70 was in good enquiry at 95 and 1947-50 3½ per cent. New Loan was steady at 93-2. There were buyers of short-dated securities with little offering. The bank rate remained unchanged at 3½ per cent.

Teas.—A steady tone prevailed in this section. Basmatia changed hands at 15-8, Hattikiras at 14-8, Jutlibaris at 13-8 while Seajulis improved to 29-2, Rajabhat 28-12 and Betjan at 20-8.

BOMBAY SHARE MARKET.

From our Correspondent.

(*By Wire.*)

Bombay, May 25.

A little better feeling prevailed in the share market and quotations are higher alround than last week.

In the industrial section, there was good buying of Bombay Burmahs and Tata Iron & Steel ordinaries. In these instances, prices have risen by Rs. 25 and Rs. 5 respectively.

In bank shares there was not much change except for Imperial Bank fully paids which are easier by about Rs. 20.

The government securities market has been gradually becoming narrower and it appears that business in securities is likely to drop off, operators preferring to transfer their attention to industrial shares. But for official support, which now is no longer a secret to the market, securities would have dropped to much lower level.

JUTE AND JUTE GOODS.

JUTE.

Calcutta, 26th May, 1933.

The market durng the week under review ruled steady but irregular with prices for Ready Firsts fluctuating between Rs. 33/- and 36/- per bale. The uncertainty of the political developments at Geneva and the repercussions of the prospects of the success of the World Economic Conference on the market had been the chief factors causing abrupt and violent fluctuations during the week. The undertone of the market, however, is very healthy and mills have shown sustained interest at every decline. There has been good business reported by shippers, and it is confidently hoped that with the successful termination of the Disarmament Conference, prices will again resume their upward course in the next few days. The closing tone of the market was steady with sellers reserved.

JUTE CROP.

Messrs Sinclair Murray and Co. in their jute crop report for the week ended May 20 say:—

General.—The weather has been favourable during the week and the crop has made good progress.

Narayanganj.—Weather during the week has been favourable. Plants are making good progress and they range in height from 1 ft. up to 5 ft. Weeding operations are going on as required. River is about 1 ft. lower than at this date last year.

Chandpur.—Weather is very favourable and plants are growing well. Plants range in height up to 5 ft. 6 ins. Weeding operations are going on as required. River is at about the same level as last year.

Chaumuhani.—Weather during the week has been favourable. Plants are growing well and they range in height from 1 ft. up to 5 ft. Weeding going on steadily as required.

Akhaura.—Weather has been wet during the week and dry conditions are now needed. Plants are healthy and range in height up to 3 ft. 2 ins. Weeding is entirely suspended on account of the excessive moisture in the fields. River is slightly lower than at this time last year.

Niklidampara.—Weather during the week has been favourable. Plants range in height from 9 ins. up to 3 ft. Weeding is going on as required. River has fallen 1 ft. and is about 2 ft. lower than at this date last year.

Sarishabari.—Weather during the week has been favourable but more rain is required. Weeding is going on freely. Plants are healthy and they range in height from 9 ins. up to 4 ins. River is 4 ft. 9 ins. lower than at this date last year.

Mymensingh.—Weather during the week has been favourable. Condition of plants satisfactory and they range in height from 1 ft. up to 4 ft. Weeding operations are going on freely as required.

Serajgunge.—Weather continues favourable. Condition of plants satisfactory and they range in height up to 4 ft. River is about 4 ft. 9 ins. lower than at this date last year.

Bhangoora.—Weather is favourable. Condition of plants is healthy and they range in height from 3 ins. to 3 ft. Weeding is going on as required. River is about 2 ft. 6 ins. lower than at this date last year.

Madaripore.—Weather has been favourable. Condition of plants satisfactory and they range in height from seedlings up to 4 ft. 2 ins. River is 10 ins. lower than at this date last year.

As a basis of comparison we take last season's crop as 16 annas.

Arrivals & Exports of Jute, Raw.

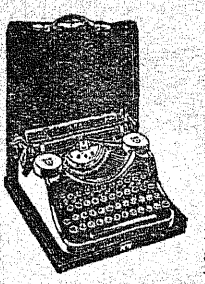
HESSIAN.

The market during the week has ruled steady but irregular due to disquieting news from the Disarmament Conference at Geneva. Consumers, have, however, been buyers, at the decline and there has been good demand from America. Mills have sold very sparingly and only second-hand holders have come out as sellers and profit takers. The closing tone of the market is strong, and with the report of further devaluation of the Dollar from America, interest has again revived and rates have gone up again. The highest rate on the Futures Market for 40″×8 oz. Hessians, was Rs. 11-9 and the lowest Rs. 10-6. The closing price was Rs. 11-1.

(*Continued on page 95?*)

THE UNDERWOOD
PORTABLE



Ranks foremost in writing machines because of Lightness in touch—Quickness and ease of action—A type impression which is sharp and distinct—An Alignment of type which long and hard use will not alter.

It is quiet, because of a new carriage return, a new shift key mechanism and a generally subdued key action. It is fast, because incorporated in it are exclusive features that, for years, have made Underwood typewriters the speed typing machines of the world.

Fuller particulars promptly furnished on request or better still, ask for a demonstration.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

Karachi, May 25.

After some reaction in the last few days, the position of cotton remains steady on better foreign advices. Sind Desi is quoted Rs. 17-12 ; Sind American Rs. 21-4 to Rs. 22.

Bombay, May 25.

The market has ruled steady with small fluctuations throughout the week. It has acted both ways, as a result of speculators buying and selling on American advices and news about political situation in Europe. The overbought position was liquidated, and at decline the technical position is very sound. Crop reports from U.S.A. are favourable but the bearish effect is fully balanced by trade buying. Profit-taking has been resorted to at every rise and the daily fluctuations were consequently within a small range. General optimism is gaining strength and bull news are being fully responded to by the operators. Dry goods, both at home and abroad, are better. Speculators favour short purchases rather than short sales. Technically the position is sound and healthy.

The following are the latest prices available :—

PIECE-GOODS.

The optimistic feeling that was prevalent in the market during the previous weeks has been translated into actual business. The tone of the market has been distinctly firmer and a more healthy view is generally held regarding the future trend of prices.

There has been fairly wide enquiry and a comparatively larger business has resulted in almost all the sections ; large fresh business has been negotiated with Indian mills. The stocks that were at one time becoming too large, are gradually being transferred to the markets. Apart from Indian mill business, contracts for Japanese and British goods have also been placed on a fairly large scale for grey as well as bleached goods. Fresh business has been effected also in side lines like shirtings, silk fancies and woollens. Orders have been placed with the Continent for seasonal goods like rugs, cotton blankets, shawls and meltons.

More encouraging reports are being received from up-country markets, and the offtake is better than in the previous week.

Bombay.

The conditions during the week under review were not so encouraging as they were in Calcutta. The re-opening of the Mulji Jeitha Market is, however, considered a healthy sign in the trade, but so far no material effects are visible.

There has been a small enquiry in Japanese piecegoods and also in Indian cloth recently, but the total quantity of business is not large. The values have, however, shown an improvement and the dealers are more optimistic of the future.

Madras.

There has been a small improvement in the market this week. Retail sales are on an improved scale, and the values realised are better than previous weeks. Good demand from the adjoining districts is visible and dealers at the moment have come to Madras for making purchases. The improvement noticeable is partly due to the improved tone of piecegoods market by itself, and partly due to the improvement in the price of groundnuts, hides and other commodities. At the moment, the general trend of the market is optimistic and healthy.

Amritsar.

Like other centres, the Amritsar piecegoods market has also ruled steady with a little more enquiry. The stocks at a moment are no doubt large but in spite of that the market is showing an improved tone.

There has been a little better clearance of Indian piecegoods specially the Ahmedabad variety. Demand for Delhi cloth and Madras suitings was also good and fresh business in these lines has also been placed.

Colombo.

This market, in spite of rise in cotton and piecegoods in other Indian centres, has ruled quiet with a poor business. The results of May and June are generally dull for the piecegoods trade in Ceylon and on the top of it the large accumulation of stocks have kept the market down.

GOLD.

There have been small fluctuations in the gold market during the week under review. The London market has fluctuated between £6-4 and £6-2 and a proportionate rise and fall have been noticeable in the local market in the vicinity of Rs. 30-8. The arrivals of distress gold continue in copious flow and the variety and number of small ornaments that are offered in the local bazar go to show the acuteness and extent of distress that is prevailing in the interior. Over a crore worth of gold was exported during the previous week the total export since England went off the gold standard amounting to nearly Rs. 130 crores.

London.

During the week ending May 10 to the supplies of gold available in the open market amounted to £1.5 million. There was keen demand from private continental sources. Consequently, prices again ruled at a substantial premium over the franc parity.

The Bank of England Bullion reserve against notes amounted to £187 million on the 17th May an increase of £100,000 on the previous Wednesday.

An interesting piece of news is received from Moscow stating that the U. S. S. R. propose to use platinum as a currency metal in Russia. The U. S. S. R. possesses the largest platinum reserves in the world, amounting to 7 million ounces and its output is controlled by the Ural Platinum Trust. Before the war, Russia had almost a world monopoly in the supply of platinum, the only other important reserves being in British Columbia.

The following were the United Kingdom imports and exports of gold registered from midday on the 1st inst. to midday on the 8th inst.

Imports.	£	Exports.	£
Netherlands ...	1,024,602		
Belgium ...	23,000	Netherlands ...	446,955

Canada ...	230,000		
Other countries ...	26,111		
Total ...	5,839,568	Total ...	645,589

Gold shipments from Bombay during week ending May 3 week amounted to about £1,112,000. The s.s. "Rajputana" carries ₹922,000 of which ₹493,000 is consigned to London, £400,000 to New York and £29,000 to Amsterdam. The s.s. "President Monroe" has £80,000 consigned to New York and £30,000 in sovereigns for Marseilles, and the s.s. "City of Cairo" has ₹80,000 destined for London.

The highest and lowest price of gold per fine ounce during the week were—

May 18	123s. 2d.
May 25	122s. 5d.

The highest and lowest prices of Mint gold ready were as follows:—

May 20	Rs. 30 6 9
May 25	,, 30 6 0

The Imports and Exports of Gold and Silver were as follows:—

(In thousands of Rs.)

SILVER.

The market during the week under review has ruled quiet but steady. After ruling at Rs. 55-12 during the earlier part of the week, silver has ruled steadier, and the price is in the vicinity of Rs. 57-8, after touching Rs. 58-2. The undertone of the market is steady and the only uncertainty hanging over the market at the moment is about the reduction in the import duty of silver following the discussions at the London Economic Conference during the next month. Stocks have been slightly higher at 9000 bars in Bombay and 100 bars in Calcutta. Offtake however has improved to about 100 bars taking both the centres together.

London.

During the air mail week silver market ruled very erratic with wide fluctuations in rates. The continent has sold, but the others have shown no decided tendency. American speculators and Indians have operated both ways. The highest and lowest of the week have been 18 15/16d. and 19¾d. respectively.

The following were the United Kingdom imports and exports of silver registered from midday on the 1st inst. to midday on the 8th inst.

Imports.	£	Exports.	£
Germany ...	24,039	U. S. A. ...	327,690
Netherlands ...	28,254	Yugoslavia ...	24,900
France ...	4,905	French Possessions in India ...	7,100
Japan ...	13,452	France ...	4,032
U. S. A. ...	42,200	Germany ...	2,565

TEA AND COFFEE

TEA.

There was no sale of tea in Calcutta this week. Details of the scheme of tea export restrictions to come into effect from May 26, are now available from the Government resolution published in the *Gazette of India* of May 19. The licensing authority shall be a committee representative of the tea-growing industry in India, and shall contain nominees of the principal tea associations and interests in the Assam-Bengal and the South Indian areas. The offices of the Committee shall be maintained at Calcutta and Coonoor. Among the more important duties of the Committee are the following:—

The Committee shall maintain a record of the yearly export quota allotted to each tea estate and shall also maintain an account of all licences issued against such quotas. A year is the period from April 1 to March 31 next.

The total yearly Indian export allotment shall be such percentage of the standard Indian export as is agreed upon by the representative Committee of the Indian, Ceylon and Netherlands East Indies producers for each year of regulation and approved by the Government of India. The quantity which may be exported by sea shall bear the same ratio to India's total allotments which the standard export by sea bears to the total Indian standard export. The Licensing Committee shall not in any one year issue licences for the export of tea in excess of this quantity. The standard export is the maximum quantity exported in any one of the three years 1929, 1930, 1931.

The yearly quota for each estate shall be based on the accepted maximum production of that estate in any one of the four years 1929 to 1932 inclusive, allowance being made for young tea. This maximum is termed the crop basis. The yearly quota shall bear the same ratio to the crop basis of the estate as the total overseas export allotment bears to the total Indian crop basis.

Export rights created by the allocation of a quota shall be transferable.

On application by a tea producer or by an exporter to whom export rights have been transferred by a producer, the Licensing Committee or the officer empowered by it in that behalf, shall issue an export licence covering the quantity proposed to be exported, provided that the unexhausted quota standing in the name of the producer desiring to export, or by whom the export rights have been transferred is sufficient to cover such quantity.

Each license shall bear the date of issue and shall be valid up to March 31 next, succeeding that date, provided that licences against which shipments have not been effected before March 31 in any year may be exchanged not later than 14 days from the date of expiry for a special licence which will be valid up to June 30 next succeeding. Special licences shall be accounted for against the export allotment of the year in which the original licence was issued.

For the year ending March 31, 1934 the issue of licences for a quantity in excess of the overseas export allotment for that year less such quantity as has been exported after March 31, 1933, and before May 26, 1933 and the export quota of any estate for the year ending March 31, 1934, shall be inclusive of any quantity exported after March 31, 1933 and before May 26, 1933.

London.—At the London sales, prices were generally maintained. Among Indian varieties commonest kinds showed a little higher tendency. Other sorts continued firm. Java teas were also in good favour, all kinds being in demand. The best varieties were sold at steady rates. Medium and common sorts were sometimes a farthing per lb. higher.

At the London auctions on May 22, 34,500 packages of Indian tea were submitted for sale.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	7⅞d.	7⅞d.
,, Broken Peokoe ...	7⅞d.	8d.
,, Orange Pekoe ...	8d.	8d.
,, Broken Orange Pekoe ...	7⅞d.	8⅛d.
,, B. P. Souchong ...	8d.	8d.

The following are the value prices:—

Clean Common Pekoe ...	8d.	
,, ,, Broken Pekoe ...	8⅛d.	
,, ,, Orange Peokoe ...	8⅛d.	
,, ,, B. O. Pekoe ...	8⅜d.	8½d.
,, ,, B. P. Sonchong ...	8d.	8⅛d.

At the London auctions on May 18, 14,500 packages of Java and other teas (including Sumatra) were submitted for sale.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	5½d.	5⅝d.
,, Broken Pekoe ...	4½d.	5⅛d.
,, Orange Pekoe ...	6d.	5⅛d.
,, Broken Orange Pekoe ...	6⅛d.	5⅝d.
,, Broken Pekoe Souchong ...	5⅜d.	5⅛d.

The following are the value prices:—

	Last auction per lb.	To-day's auction per lb.
Clean Common Pekoe ...	6d.	6d.
,, ,, Broken Pekoe ...	5⅞d.	5⅞d.
,, ,, Orange Pekoe ...	6⅜d.	6⅜d.
,, ,, B. O. Pekoe ...	6¼d.	6¼d.
,, ,, B. P. Souchong ...	5¾d.	6d.

The following were the average prices of tea in the London market during the week ending May 18.

	Last week per lb.	This week per lb.
Indian Tea (Northern) ...	8.98d.	9.17d.
Indian Tea (Southern) ...	10.93d.	10.32d.
Ceylon Tea	11.14d.	11.09d.
Java Tea	7.04d.	7.09d.
Sumatra Tea	6.27d.	6.52d.

Tea Quantities for sale this week:—Indian: 51,600 packages, of which 50,000 are on garden account; Ceylon: 26,300 packages, of which 26,200 are on garden account.

Tea Exports.

The following figures of Tea Exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association:

Quantity of tea entered for export to United Kingdom for the first half of May, 1933.

			lbs.
Calcutta ...	Black	...	1,088,415

SUGAR

A further small rise in the value of sugar has taken place during the week under review. Java ready and afloat being done at Rs. 10-4 and Rs. 10-4-6 respectively. The offtake, however, has remained unchanged as reported last week, the strength in the market being mainly due to firmer advices from London and New York. The scarcity of sales from the Indian mills is no less responsible for the steadier conditions. The general strength in the commodity markets is also responsible for the firmness in the sugar market.

The Stocks at the main Indian ports are estimated at:

(In bags, 10—bags 1 ton).

	1933.	1932.
Calcutta	35,030	33,500
Bombay	90,000	130,000
Karachi	87,500	150,000
Madras	11,500	40,000
Rangoon	12,360	25,540

Bombay:—The conditions since reporting last have improved considerably, and a firmer tendency was noticeable in the market all round. Business for May shipment was done 2½d. higher than the previous lots. Some strong hands are holding the stocks and are not inclined to sell them. This is also responsible for rise in local as well as Java market.

Fairly large May and June shipments from Java have been diverted to various West Coast ports which has reduced the selling pressure to a minimum. Besides the local prices being below the import parity the strength of the market is all the more justifiable.

Cawnpore:—After a rise the market has witnessed a small reaction and so long as the floatings are despatched, the market may continue to remain dull for the time being.

Foreign:—The fact that the world sugar consumption is likely to exceed world supply by about 1.8 million tons had a very healthy repercussion on the market. The rise being continuous and persistent, the values in New York and London market during the week were a shade lower than the previous week, but they are fairly high when considered from the point of view of the values that ruled a month ago.

Stocks in London and Liverpool markets are estimated at 235,000 tons against 110,000 tons a year ago.

GRAINS AND SEEDS

RICE.

The market during the week under review has ruled steady. The supplies continue to remain on a small scale in Rangoon. Although there has been no fresh business worth recording from Hongkong and other Eastern ports the sellers are not willing to discount prices.

Quotations are:

	Last week.	This week.
Big Mill Specials ...	Rs. 157-8 to 160-0	157-8 to 160-0
Small Bills	,, 172-8 to 175-0	175-0 to 177-8
Meedone	,, 182-8 to 185-0	182-8 to 185-0
Boiled Rice long ...	,, 202-8 to 212-8	207-8 to 217-8
Paddy	,, 58-0 to 62-0	58-0 to 62-0

WHEAT.

Karachi, May 25.

Wheat is quiet at Rs. 25-2. Daily arrivals show gradual increase and are now estimated at 30,000 bags. The recent rise in price is attributed to speculative activity. The present price, however, corresponds closely to the import price of Australian wheat in important Indian ports. Further rise seems at present improbable unless wheat improves in foreign markets.

Wheat:—The market though steady at bottom has ruled a shade easier during the week under review. After touching Rs. 4-1, September-Beta is a shade easier at the close. The uncertain political situation in Europe has been a great disturbing factor and consequently the trend is very uncertain. The demand for wheat goods is not very brisk, but on the whole the undertone of the market is fully steady.

World Markets:—World markets have generally ruled steady, partly due to bullish American advices and partly due to the improved statistical position.

An item of special interest is the recent official computation of the wheat reserves in Canada. A total stock of about eight million tons, as on March 31, may rightly be viewed as a slightly bearish factor, especially as the balances of other Canadian cereals are also somewhat larger than at the corresponding date last year. In quality and condition these wheat holdings are, according to reports received, quite fair.

It is now stated that the American Farm Board has liquidated its May Futures which can be considered a bullish factor. The progress that has now been made with regard to the Farm Relief Bills is also favourably affecting sentiment.

Exports from India during corresponding week of 1932	10 tons.

LINSEED.

The market after ruling fully steady has ruled quiet at the close partly due to May liquidation. The decline though small is expected to be shortlived since the statistical position of world linseed crop as stated in one of our previous reviews is fully bullish. After touching Rs. 4-10 and Rs. 4-7 September Beta now stands at about Rs. 4-8-6.

GROUNDNUTS.

The tone of the Madras market is very firm and a considerable rise in values have taken place since reporting last. London has paid a good price. Arrivals are coming in copious flow and dealers are clearing their stocks. The arrivals in Madras are almost equal to the last year but the demand being brisk, they have been readily taken up by the shippers.

COUNTRY PRODUCE.

Myrabolans.—Jubbulpore average at Rs. 2-2 per md. Jubbulpore No. 1 at Rs. 2-8 per md. Crushed No. 1 at Rs. 3-8 per md. nominal.

Bran	2 12 to	2 13

METAL, PAINTS AND CEMENT.

Galvanized Corrugated Sheets.—There are little or no changes in this market to report. During the week there was little business passing but rates are still firm due to a shortage of stocks throughout the market. Unless demand improves rates will no doubt weaken when supplies commence coming forward more freely. Forward position is still uncertain and there has been little or no forward buying.

Sectional Material.—There have been further rises in both Continental and Tata prices and stocks are also short in the market with the result that rates have throughout the week been very considerably firmer and particularly in the case of Angles. There appears to be little or no improvement in the actual demand, but the general rise in prices and the political conditions in Europe are responsible for the firmer tone. British and Tata B.S.S. primes remain unchanged.

Cement.—There is little to report and the demand is well up to normal.

FREIGHT.

Earlier in the week, the market showed considerable improvement for Continent and Plate tonnage for ready positions, forward being quiet. Towards the close, however, the tone has been very steady and near and forwards, all positions are being booked for U. K. and Continent, specially for jute.

JOINT STOCK COMPANIES IN BENGAL.

During the month of April, 1933, eighteen new joint stock companies, limited by shares, with an aggregate authorised capital of Rs. 49,20,000 were registered under the Indian Companies Act (VII of 1913) in the Bengal Presidency.

The respective details are given below—

		Rs.
3	Provident Insurance	60,000
1	Other Insurance	25,00,000
1	Printing, publishing and stationery	30,000
1	Iron, steel and ship building ...	2,00,000
1	Engineering	50,000
1	Agencies (including managing agent company)	20,000
1	Match	1,30,000
5	Other trading and manufacturing ...	4,10,000
1	Tea planting	3,00,000
2	Sugar (including jaggery) manufacture	12,00,000
1	Companies other than specified above	20,000
	Total ...	49,20,000

(Continued from page 983.)

is of little practical importance. But the Finance Member's opinion that in such an event there would have been a small deficit of about £214,000 does not seem to lack reason. As for the budget year, the Finance Minister has made a liberal provision for new social services and unemployment relief; and with such a programme he was faced with a contingent deficit of over £5 million. This he reduced to £4.7 million by a reduction of 1½ per cent. from the estimates of the supply services, and 270,000 by certain Salary reductions for civil servants. The remaining 4.3 million is met largely by borrowing amounting to 3.16 million and by bringing in the previous surplus of 1.14 million. Though at the moment Mr. McEntee seems inclined to support the orthodox principles of sound finance, he gives in his speech unmistakable signs of his readiness to tone down their severity if the needs of national economy require them. The Government are certainly prepared to relax the rules of sound finance, if expenditure on social services should seem necessary. The Finance Minister gave indications of a number of schemes in various stages of progress and assured the House that "any sound effective proposal, which will further develop the natural conditions and improve the status of the people and provide employment to Government, will be considered most sympathetically and will not be rejected on the ground of expense." Whether this announcement would ultimately mean the pursuit of any reckless policy, capable of endangering the stability of the currency, is now too early to say. But there is to-day less tolerance of unorthodox methods of finance than before if only such methods are intended to promote the revival of national industry.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

RECENT LOANS AND THEIR BEARING ON FINANCIAL SAFEGUARDS.

We wonder whether the British members of the Indian joint Parliamentary committee and the Indian delegates who have proceeded to London in this behalf have a correct and complete appreciation of the true bearing of the last sterling loan on the much-vexed question of Financial Safeguards. Even at the risk of wearying our readers by repeating some of the arguments advanced in earlier numbers, we wish to present to-day the complete case for the information of the Parliamentary committee. One of the special responsibilities of the Governor-General in the new constitution is to be "the safeguarding of the financial stability and credit of the Federation". And the object of this special responsibility is to "confer on him powers to step in, if the need should arise, in the event of the policy of his Minister in respect, for example, of budgetting or borrowing being such, as to be likely in the Governor-General's opinion, to endanger seriously the provision of resources to meet the requirements of his Reserved Departments or any of the obligations of the Federation, whether directly, or indirectly by prejudicing India's credit in the money markets of the world." We suppose that, in the present constitution, the safeguarding of the financial stability and credit of the country is as important as in any future constitution. Who is exactly responsible for this responsibility Is such a responsibility laid on the Finance Member or the Viceroy or the Secretary of State for India? In any case, between them jointly and severally, there can be no shirking of this responsibility. How is this responsibility being discharged? For the past five years, till a few months ago, every loan operation of the Finance Member was calculated to disrupt the credit of India in the Indian market. Every time a new loan was launched there was a considerable setback in giltedge prices. Was this the way in which the credit of India was being safeguarded?

* * *

Even in respect of the last three rupee loans, in regard to which no adverse repercussions on giltedge prices followed, the Finance Member need not have given away as much to the investor as he did. In a like situation, the British Chancellor of the Exchequer, by a bold and adroit move, brought down the borrowing rate in quick and sharp stages. The secret in this programme was the offering of the New Loan at a rate which was distinctly lower than the yield forthcoming on the existing securities on the eve of the loan. In the past, India's Finance Minister used to offer, actually, an yield on the new loan appreciably higher than that on existing securities at the time of the flotation of the loan. His timidity and diffidence disappeared in the case of the issues in this calendar year only to the extent that the offer on the new loan was on par with the yield on the old securities. He could never muster enough courage to do in India what the British Chancellor did in Britain. He could never plan the new loan on a basis in which the yield was lower than that on leading giltedge securities. On the one hand, the Government have been paying far more than they need have done. This means that there could have been much more saving in interest charges than has actually been the case. On the other hand, there has been disruption in the giltedge situation subsequent to every new loan flotation. Investors had been repeatedly losing confidence in giltedge. New loan programmes had become extremely difficult to execute. Unpopularity of giltedge means that the credit of the Government is not as high as it could and should be. While in respect of all the loans for which unduly attractive terms were offered, the flow of subscriptions had been tardy, there have been heavy over-subscriptions in the case of the loans in which the yields were more or less on par with those on old securities. This should have taught the Government a wholesome and fruitful lesson.

* * *

In London, in regard to the recent loan, the lesson that the Treasury should have learnt from their Indian experience does not appear to have been put to any useful use. At a time when a 3½ per cent. loan at 96 should have sufficed, the India Office issued a 4 per cent. sterling loan at £97½. The 7 per cent. sterling loan issued in 1921 was a perfect scandal. The 6 per cent. loan issued in 1930 on an yield which worked out to 6¾ per cent. was offered at a time when, in the view of so leading an authority as the *Economist*, 5¾ per cent. should have sufficed. Apart from the question of giving any undue benefits to the British investors and apart from the question of the Indian taxpayer being unduly penalised, the issue that we wish to pose on the present occasion is this: Has the Secretary of State or the Viceroy or the Finance Member shown, by their past actions, that they are specially and fully qualified to safeguard the financial stability and credit of India? The answer to this question is in the negative. On the other hand, on not a few occasions, their operations have been calculated, directly and indirectly, to prejudice India's credit in the Indian market as well as in the London market. So far as the proposed Indian Finance Minister is concerned, it is useless to speculate on his capacity or expertness or skill or the lack of it from this point of view. We are, however, in a position to judge the record of those in charge of this responsibility in the present system of Government. It is these representatives who insist that this special responsibility should be kept, and should continue to be kept, in their sole charge. It is obvious that they have not discharged this responsibility in any strikingly successful manner in the past. What, then, is the justification of their claim to be the only authority competent to exercise that responsibility in the future? It is gratuitous insult in advance to the Indian Finance Minister to doubt his capacity to bear this responsibility. It is a doubly grievous insult when the men who hurl the it have nothing in the past to show that they can throw the first stone.

* * *

Even the *Statesman*, which is, in name, the friend of India, and which is, in fact, the friend of beauracracy, has been driven to pungent remarks and brutal frankness. In an article which has been widely quoted in the country, our contemporary said:

> *"The whole performance has increased the demand for a Reserve Bank and given a new interpretation in the meaning of safeguards. Investors in this country need protection both from the India Office and the Finance Department."*

* * *

The Secretary of State and his friends have been telling us that the future Finance Minister will play ducks and drakes with India's finances and that, to prevent such a disaster, a Reserve Bank should be created forthwith. We may, however, tell the Secretary of State and his friends that their departmental

control of currency and finance has played havoc with our finances and that it is this disastrous experience which makes us ask for a Reserve Bank. The Britishers wish to force on us a Reserve Bank for political reasons. We lay our claim for a Reserve Bank on economic considerations. If the proposed central banking institution is to be the machinery for the enforcing of the financial safeguards, that is to say, if it is to be the means by which the power and control of the present authorities is to be perpetuated, we can have nothing to do with a Reserve Bank planned to carry out such an object. If, on the other hand, the aim and object of the Reserve Bank is to be no more and no less than this,—that the monetary mechanism of no advanced country can be said to be perfect until and unless it has a Reserve Bank to unify currency and credit and to carry out Government's transactions with expert skill, then we do welcome such a Reserve Bank. The test for such a Bank is simple: Will the constitution allow of interference by the Secretary of State or his financial advisers (namely, the Bank of England) or the Governor-General? Or will the Bank be in a position to function independently of all extraneous influences and unaffected by any vested or sectional interest?

* * *

So far as the constitution of the Reserve Bank is concerned, the League of Nations has laid down the broad fundamental principles. On most of the clauses, there could be no disagreement whatsoever. The provisions, that would require careful scrutiny, are in respect of the control. What the Bank requires is not mere freedom from political interests but freedom from every interest which is detrimental to national economy. If those in power to-day seek to keep their grip over our finances through the instrumentality of this institution, a Reserve Bank so fashioned may be the suitable machinery for enforcing financial safeguards; but it would be powerless to maintain the credit of the Federation at home or abroad.

* * *

We would like the members of the Parliamentary Committee to put a few straight questions to the representatives of the Indian Government:

(1) At the time when they floated the 3½ per cent. 1947-50 loan at Rs. 96, did they satisfy themselves completely that the new borrowing rate that they were bringing into being was apt and suitable?

(2) If they satisfied themselves in this regard, was it not their bounden duty to have prevented the severe landslide that took place immediately after the lists closed?

(3) If they were not satisfied in this regard, why were they in a hurry as regards the flotation of the Rupee loan? Could they not have waited till more settled conditions came to prevail in the giltedge market, so that such borrowing rate as was decided upon would have been in better accord with the trend and tenor of the giltedge market in India?

(4) At the time the Finance Member floated the 3½ per cent. loan in India, was he aware of the impending 4 per cent. sterling loan in London?

(5) If he was aware of the sterling issue, why did he not wait till the sterling loan was done with, so that the 3½ per cent. loan could follow, and not precede, the 4 per cent. loan?

(6) If he was not aware of the pending sterling loan, did he protest against a disastrous proposal of this nature being jumped on him?

(7) What was the need for the sterling loan?

(8) Why was the particular moment chosen?

(9) Was not the Secretary of State supplied with sufficient funds to enable him to carry on practically right to the end of the fiscal year? In such a situation, was not the India Office so strongly placed as to insist on competetive terms for its sterling borrowings?

(10) What was the yield on the conversion loan of the British Chancellor of the Exchequer as compared with the yield on the existing British securities at the time of the flotation of the conversion loan? And what was the yield on India sterling securities at the time when the 4 per cent. sterling loan was issued at £97½? If the British Government offered a yield on the new loan lower than that on the old securities, why was India advised to offer a higher yield?

(11) Does it redound to the credit of the Government if a Rupee Loan becomes unsaleable at even 8 per cent. below the issue price within a fortnight of its issue?

(12) Protests from all sides have been made; the authorities have been requested to explain the real purpose and motives behind the recent loan operations. How is it that when the complaint is so universal, the Government do not even condescend to give an explanation of their action?

(13) Is it not the case that only within the last few months, the confidence of investors has revived to some extent in the securities of the Government of India?

(14) Have not the developments of the last three weeks administered a cruel blow to this reviving confidence?

(15) Can the special responsibility for financial credit and stability be entrusted to authorities who allowed their Rupee loan to sink to a heavy discount within a week or fortnight of its issue and who find themselves unable to do anything to save their face and to protect those who trusted them with vast sums of money?

INDIA & THE WORLD ECONOMIC CONFERENCE.

Though the World Economic Conference is fast approaching and India has a large place in any scheme of world economy, there is as yet no definite indication as to the *personnel* of the Indian delegation or the views which such delegation would urge in the Conference. The real reason is, of course, not far to seek. India has only to play second fiddle to Great Britain and accommodate herself to the interests of her rulers. That was made clear even in the more restricted scope of the Ottawa Conference; and it is not to be expected that she will have a better chance in the wider sphere of the world conference. Once the British Cabinet is clear in its mind about this, the *personnel* of the Indian delegation is a matter of little or no importance. The officials of the India Office, who are unquestionably expert both in their knowledge of Indian conditions and in the ability to place it at the service of Great Britain, could be drafted to the delegation at the eleventh hour; and the show of Indian participation in the momentous deliberations beginning with June 12 could be successfully staged. It would appear, however, that the Government of India are not able to regard with feelings of equanimity the complacency with which India Office is overlooking their claim to be consulted on this important question. The press reports have a number of accounts about the tuzzle between Sir George Shuster and Sir Cecil Kisch. It would be well, no doubt, if the autocrats of the India Office could be supplanted by Sir George, who, in the financial stress of recent years, has been obliged to study the fundamentals of India's national economy not only in relation to the present depression but also in its more permanent aspects. Whether Sir George is willing, or will be able, to resist the importation of extraneous considerations is a different question. But we are certain that he is one of the few in the country who can appraise the proposals of the World Economic Conference from the admittedly

peculiar standpoint of Indian economy and India's national finance.

* * *

But the *personnel* of the Indian delegation, however formed, would matter little either to the Conference or to India. It is yet too early to try to anticipate the course of the Conference. But it is certain that in spite of all the elaborate "talks" at Washington and the bridging of differences on some points, the Conference would find it no easy task to clear the initial difficulties and get into stride. To gauge the prospects of the Conference it is necessary to be clear first about the conditions precedent to a sincere tackling of the tasks, the nature of the major issues, the solutions that now hold the field and the chances of their adoption at the Conference and subsequently by each of the nations concerned.

* * *

At the moment, the conditions precedent are far more important inasmuch as it rests with them whether the Conference will be a sincere attempt to facilitate a revival or a mere repetition of its counterpart of 1927. The first requisite is, of course, a certain degree of international goodwill. And in this respect, it is unfortunate that in the last few months, and in the last few days especially, much has happened to excite the already frayed nerves of the nations. Politically, at least, the League has ceased to count, its reputation having fallen under the cloud of the fiasco in the Far East. And the League's discomfiture has been the signal for the rise of ominous clouds in the East.. Japan has used with indomitable energy the free hand which she acquired by her secession from the League. She has consolidated her position in Munchukuo by closing the open door, except for a valve in her own favour. With China she has achieved all she wished for and is now at the gates of Peking. In fact so complete are her plans in regard to China that a competent observer like the *Economist* suggests that from now Japan might try to work in league with the present Chinese Government to the detriment of America and the European powers. The advance of Japan has assuredly shifted the centre of international cares from economics to politics.

* * *

The situation in Europe is, if anything, even worse. A fortnight ago it was considered a notable gain to the cause of disarmament that America was prepared, in the event of a satisfactory settlement being reached, to participate on consultative pacts for the assurance of security against the aggressor. But the value of that American offer depends upon the readiness of those, who were harping on security, to realise that their worries on this account have been lessened and that, therefore, they could view the proposals for disarmament more liberally than before. Of that recognition, there is as yet no sign. Rather, obsessions regarding a new armed conflict have been on the increase of late. Far from the peace mentality being strengthened, the old idea of balance of power through alliance and entente has regained its hold on the European mind. The progress towards a revision of war debts and reparatins has engendered the fear that revision of the Peace Treaty of Versailles in this respect would gradually strengthen the demand for revision of territory and boundaries; and the little nations which owe their existence to the Treaty are trying their best to stop in time the leak in the dykes. In this situation, the Four Power pact has come as the very opposite of oil in troubled waters. Suspiciou and ill-temper have been aroused all round. And it might, if conditions do not improve, prove the beginning of a new alignment of political entnetes all over Europe.

* * *

In a situation like this, the ways of the Nazi Government are a new source of disturbance, immediate as well as remote. No clear indications of Herr Hitler's foreign policy have yet been available. But it is certain that the Government have already given a new significance to Dr. Bruening's demand for equality of armament with other nations. While undoubtedly, German statesmen of the type of Bruening and Stresseman were urging the observance of the conditions in the Treaty of Versailles merely on grounds of German nationalist sentiment, Herr Hitler sees in it the possibility of ultimately sabotaging the Disarmament Conference and of leading the way to a race in armament and ultimately the preponderance of Germany over the powers of the continent.

* * *

Last week's developments in regard to the Disarmament Conference have strengthened the suspicions in this regard and unfortunately, France is playing into the hands of Germany by insisting that she could never agree to the reduction of tanks and big guns unless her claims with regard to security and control of standardisation of arms were fulfilled. Herr Nadolny is reported to have declared thereupon, that Germany would be compelled to withdraw her acquiescense of the British plan. The crisis which resulted from these declarations has, in part, been reduced by the interest which developed subsequently over the set of proposals drafted by a sub-committee at the instance of Great Britain and in the light of certain criticisms made by the Soviet delegation. But it is clear that so long as the political situation in Europe and the plans and ambitions of the states are fundamentally unsound, the cause of disarmament can make no progress. What is relevant to our purpose is that, unless the Conference is crowned with 100 per cent. success which, at the moment, is more than the most sanguine amongst us can hope for, the representatives of the nations would be going to he London Conference in a spirit hardly conducive to amicable settlement.

* * *

If we might indicate in short the agenda of the international conference during the coming month, it may be framed as (1) disarmament, (2) war debts, and (3) international economy. The first is under the process of discussion, with what results we have already noticed. As for the second and the third, it is now authoritatively announced by Mr. Ramsay MacDonald that the talks of the World Economic Conference and the negotiations in regard to war debts would proceed "'concurrently and on parallel lines'', so that, when the labours of the representatives are finished, the the world shall have the benefit of a concrete and comprehensive scheme for the resuscitation of world

trade and finance. What then are the chances of the Conference clearing the first two hurdles of disarmament and war debts, before it comes to tackle questions of world trade? If it is possible that the disarmament conference could continue, without accentuating the discord that is now present among the nations, the problem of war debts might be solved with comparatively less difficulty. For the question of war debts has gradually changed from the sphere of legal right and capacity to pay to mere *force majeur*. Our Overseas columns in this issue deal with the state of opinion in America and indicate the possibility that ultimately the troubles in regard to the general agreement might be overcome by submitting to a process of mere drift. That is, the nations would be obliged to default and Mr. Roosevelt, whether or not he consults the Congress before hand as to the policy he should adopt, might personally take the view that the discussions over the question need not be prejudiced by the fact of a unilateral, but temporary, repudiation of the debt obligation.

* * *

It has been necessary to go over all this ground to indicate that it will be a long time before the purely economic questions will be taken up. The Conference in reality will be engaged for a long time in matters in which India has no direct interest. And it is not unduly pessimstic to fear that the crux of the economic problems may not be reached at all, if a deadlock should occur over the question of war debts or even over disarmament; for in the American mind at any rate disarmament and concessions on war debts are closely bound up.

* * *

Nevertheless, it is useful and necessary to be clear about the attitude of India to the main questions which the World Economic Conference will have to discuss in England. Firstly, the Indian Delegation, if it is to be true to its name and to this country must remember that though war debts as such do not concern India directly, the implications of that question and any solution that may be arrived at on that have a vital interest for us. After all, war debts are only a category of international indebtedness; and they differ from other debt obligations only in their volume. In their incidence on world economy during a period of depression and in the period of convalescence for which all the world is working, they are exactly similar to other forms of international indebtedness. If war debt payments weigh heavily on the economy and foreign trade of advanced European nations, India's debts are no less of a deadweight during the depression and will not be less of a handicap during the recuperation. Whatever may be said of the other forms of indebtedness, India is entitled to a more than proportionate relief on the £100 million which India made over to England as a gift during the war period.

* * *

As for other forms of indebtedness, it is neither unfair to Britain nor unhelpful to India if facilities could be found for us for converting a large part of our sterling loans into a lower basis of interest. But it must be added it is merely farcical to make such a proposal so soon after the India Office has picked the pockets of the Indian taxpayer by the issue of a sterling loan on terms, which induced even the *Statesman* to suggest that it gives an altogether new complexion to the safeguards incorporated in the White Paper. Nevertheless it is the duty of the Indian delegation to the World Economic Conference to urge that in any large movement for the lightening of the debt burdens throughout the world, India should not be left out either by the comity of nations as a whole or by Great Britain, to whom her foreign relations are confined.

* * *

Taking the agenda proper of the World Economic Conference, we may examine them from the Indian standpoint under the following principal heads: (1) Exchange control and other trade barriers; (2) tariffs; and (3) currency and monetary reconstruction. As regards the trade barriers, India has been singularly innocent of imposing any barriers other than tariffs for the free flow of international trade. The system of exchange control which was envisaged during the few days following Britain's abandonment of the gold standard was never actually put into practice; and the regulations of the Ordinance which pertain to exchange control had long been a dead letter when they were actually withdrawn by the Government. Likewise, we have no system of quotas such as Great Britain and Germany, two of the foremost industrial nations of the world, have been assiduously imposing during the last one year and more. So intent is Great Britain on completing some of the schemes for canalising trade that she has successfully rendered nugatory Mr. Roosevelt's proposals for a tariff truce by insisting that the truce shall prohibit, not the imposition of new barriers, as originally conceived, but only the institution of new initiatives. In other words, Great Britain has preserved for herself the freedom to implement the numerous trade treaties which she has concluded with a few other countries.

* * *

It is unnecessary to repeat here the usual arguments in favour of protection. But it is pertinent to note that the foremost advocates of free trade have, of late, chosen to tread the path of protection and have gone far enough to find it difficult to retrace their steps. And what is more, they have done so without the only valid reason that applies in the case of protection, namely, that the industries sought to be protected are in an infant stage. Apart from this, we should like to urge that the acceptance of any indiscriminate policy of free trade would mean the wastage of a large amount of invested capital unless, of course, the industries affected find other means of

THE INVESTORS INDIA YEAR BOOK 1932-33.

(Twentieth Edition)

operating profitably. The conference will find it difficult to force the nations to accept any large measure of free trade. But whatever that may be, India has no reason to accept any obligation to lower her tariffs, merely because the Economic Conference finds it necessary to profess its faith in free trade as the only efficacious remedy for the present state of world economy. But as we have hinted earlier, it is to the interest of India and the world as a whole if this country agrees to do away with all the invidious distinctions which have recently been made between one foreign nation and another. Probably, India would have to be forced to agree to it, as Britain and not India herself, is interested in the preservation and protection of such distinctions. To be plain, the annulment of the Ottawa agreements would be to the permanent good not only of India, but Britain, the Empire and the whole world. In warning the Indian Delegation against any commitment in regard to free trade we do not imply that all the protectionist duties which are in force to-day are fully justified. There is need for a thorough examination of the position of the protected industries; but that is a matter which does not help the Conference. If it is any help to world trade, India might undertake to re-examine the tariffs and bring them, where they happen to be uneconomic, to a true economic level.

* * *

As for monetary reconstruction, it is obvious there is no reason why India should resist the general demand that the nations of the world should return to gold on a definite parity. We have little to gain and much to lose by allowing the continuance of the present state of chaos in the international currencies. The agriculturists, who depend on the foreign markets, would certainly prefer to have stable monetary conditions abroad. The industrialists, too, would like to be assured that their internal markets are not exposed to the attacks of competitors from countries with depreciated currencies. Moreover, as India is on the eve of a reconstruction of its currency and banking through the instrumentality of a new Reserve Bank, we should naturally wish that our first attempts at central banking should not be scotched by unpropitious conditions in international finance.

* * *

In the sphere of currency and monetary reconstruction, our difficulty is rather the rate to be chosen for stabilisation in terms of gold. The problem would not be so difficult except for the authority of London over the Government of India. Whether the old story about the ratio is to be repeated or whether the British Government would prefer to perpetuate the conditions in which Indian hoarders would part with their gold in consideration of a high rupee price remains to be seen. But we hope that the institution of a Reserve Bank would make a difference. It is not possible that the authorities of the Reserve Bank, whoever they may be, would consent to have their tasks handicapped with an impossible ratio. Their position is necessarily different from that of a department of the Government. If the Economic Conference results in, if nothing else, an alround return to gold, India will gain to the extent that better conditions are secured in which her Reserve Bank will first function.

* * *

As regards silver, we think it extremely unlikely that the Conference will ever consider seriously proposals for an international bimetallism. And though we hold definite views on this question we deem it unnecessary to expatiate on it. The conference would rather be concerned with the proposals for improving the prices of silver and stabilising it at a fair level. Even these, it should be remembered, did not strike the Preparatory Committee as of any great importance. But under American influence which has been strengthened during the last month by understandings with a few other countries, the proposals in regard to silver will, doubtless, be to the fore. And we have no doubt that it is the duty of the Indian delegation to give their fullest support to any reasonable proposal. But it must be remembered that India's interest in a higher price of silver is also in order that she may take advantage of it to realise a higher price for the surplus silver stocks of the Government of India. To say that India's support of silver consists in absolute cessation of sales is to deprive India of all her interest in a stronger silver market. She must have often to sell a certain maximum amount over specific periods.

RIGHT WAY AND WRONG WAY.

We have good reasons to think that the Government have been buying small parcels of securities from the market in an endeavour to lend support to drooping giltedge. We are afraid that

there is neither heart nor dash nor effectiveness in the way in which these operations are being put through. We may say that the Controller of the Currency in Calcutta and the Imperial Bank on its behalf in Bombay have been just "nibbling." Especially in the present psychology of the market, nibbling of this kind can have no value whatsoever. Rather than undertake operations of such slender size, the Government might as well refrain from doing anything. They are frittering away their resources and it is not doing anybody any good. If the authorities mean business; if they really want to put heart into the market; if their purpose is to play some part in facilitating a healthy recovery, there is every need for a drastic revision of the plans and of the methods. Rather than buy Rs. 5 lakhs a day for twenty days, it would have a far more striking effect if purchases of Rs. 1 crore were concentrated in a single day. Rather than entrust the operations to the same old brokers, it would serve the purpose far better if brokers are changed from time to time, and if orders are spread among a number of brokers on those occasions when heavy purchases are to be made. What happens now is that whenever the authorities decide on entering the market, they send for the privileged brokers and ask them to make purchases up to specified quantities. This is not a procedure calculated to have a telling effect. A number of brokers should be sent for and asked to give firm offers. They would go into the market and set up enquiries for the requisite scrips. These enquiries, emanating from a number of sources, should considerably brighten up the sentiment.

* * *

In the defence of the present mode of operations the authorities might turn round and say that secrecy must be maintained as regards these transactions; and that, therefore, they should confine themselves to tried and trusty brokers. We may straightaway tell them that all this endeavour to maintain secrecy is futile. The market knows who are the brokers employed in this connection. It is not every member of these firms that keeps his tongue tied. News of Government's entry into the market does always come to be known. A plea of secrecy is not tenable under the circumstances. The correct criterion is effectiveness. From this point of view, there is a case for the employment of a larger number of brokers and for preference being given to the less important brokers. The more important houses have, possibly, a large volume of selling orders from their numerous clients just at the time when the Government authorise them to make purchases. It is quite possible that these sales are set off against the Government's purchases. While considerable purchases are made, no effect is produced on the market. On former occasions, Indian Finance has urged a strong plea for the utilisation of the services of the small but powerful class of dealers-cum-brokers in Bombay. A Rs. 5 lakhs order entrusted to anyone of them or Rs. 1 lakh each entrusted to five of them can produce more striking effect than is now the case under the present method of operations.

* * *

Towards the week-end, rupee securities suffered serious retrogression. This was due to the weak advices received from London over the past two or three days. There is no heart or vitality left in the market. Money is plentiful. Funds are practically uninvestible. Bankers would not, however, touch giltedge securities with a long pole. Investors are also equally shy of giltedge. Professional operators are more inclined to adopt bear tactics than to bull the market. The psychology to-day is most adverse. It is unthinkable that this state of affairs is allowed to continue. The Imperial Bank and many other banks must close their balance sheets in another five weeks. If before that time, there is not a substantial recovery in giltedge prices, such little profits as have been made on the banking side would be used up to provide for the depreciation in respect of the securities taken up in this half-year. It is now the common concern of the Government on the one hand, the Imperial Bank and the other banks on the other hand, to pull up securities to somewhere near the level attained towards the end of April. If the Government could but give an assurance to the market that they will not do anything hereafter that would send securities reeling down; and if they vouchsafe some manner of gesture promising timely and necessary support, the banks would, in their own interest, second and support the efforts for a betterment of giltedge prices.

(*Continued from page 975.*)

Kettlewell Bullens. I now learn, from Place Siddons and Gough's *Year-Book*, that 451 looms "have recently been installed" in the Bowreah Cotton Mills. My stumbling was due to my having, temporarily, neglected the staff of the *Year-Book*. This was on Saturday. Monday morning—"Hullo, hullo, is that Eavesdropper speaking?"

"Yes, is that Kettlewell Bullens speaking", I asked in reply.

On confirmation, I said: "I was expecting this call from you, so as to pull me up about the information I have given about your mills. I noticed my mistake only on Saturday from a perusal of the *Investor's Year-Book*."

"The position is different from even what the *Year-Book* says," came the reply. "Bowreah has installed 450 looms, to be shortly increased to 750 looms. Dunbar has just erected 550 looms".

I need hardly say that the move taken by Kettlewell Bullens is timely and calculated to improve the earning capacity of the mills.

R. K. SHUNMUKHAM CHETTY

FIRST INDIAN FINANCE MINISTER ?

In my portrait gallery, I have deliberately assigned to the Hon. Mr. Shunmukham Chetty, a place immediately after the Hon. Sir George Schuster, as instinct tells me that the first Indian Finance Minister in the Federal Government (as and when it comes) will be Mr. Chetty.

He has, it will be agreed on all hands, an alround equipment and the requisite qualifications. In my experience of our public men, Mr. Chetty has, ever, struck me as the keenest and best-informed man in economics and public finance—and, what is more, as one who is not content with what he knows but is, all the same time, keen and curious to know what more has yet to be known.

The trouble with Indian leaders is that most of them are ignorant of the very A.B.C. of economics. They are, in the generality of cases, sturdy politicians but poor economists. Yet, 90 per cent. of politics in to-day's condition of world affairs is economics.

Our leaders derive their light in economics from the men who shape and mould the destiny and opinion of our commercial bodies. Frankly, the chambers of commerce are designed to further, protect and strengthen the capitalists, whose aims and interests are not, necessarily or ordinarily, identical with those of the masses, the consumers and the agriculturists—the men in the street, so to say, alike in urban and rural parts.

Capitalism controls public opinion in India in a variety of ways—not least by its institutions and leaders being the teachers and guides of our politicians in matters pertaining to the economy and finance of the country.

The result of this state of affairs is that in politics, there is freshness of outlook, mobility of ideas and easy adaptability to new circumstances. In economics, our leaders have but ready-made and narrow ideas, facile generalisations, and a static outlook. Stagnation is death ; the essence of life is dynamics.

Mr. Chetty differs from other leaders in that he has a good grasp of the fundamentals ; he has the attitude of a student ; he has a well-filled mind, which is yet open for fresh ideas.

Current finance is as interesting to him as all the theory he learnt at school. The new forces at play in world finance are no less fascinating to him than those which have become dormant. A new world is arising in our generation, be it in regard to political or social or economic ideas and institutions. Mr. Chetty has the humility and understanding to perceive and appreciate the new world.

His is not an open mind in the sense that it is blank or vacant. His is not a revolutionary mind in that he seeks to tear all old institutions by their roots. His knowledge imparts a measure of conservatism ; his curiosity and scientific bias account for progressiveness.

What he knows, he knows well. What he does not know, he aspires to know from those who know. He is not prevented, by any false sense of self-importance, from confessing his ignorance or, by any vain sense of snobbery, from seeking light even from one who, otherwise, may be a nobody.

Even I had the privilege of being his *guru* in regard to the problems connected with ways and means budget and its implications to the money and trade markets. I have never had an apter pupil. The best exposition of, and the most trenchant criticism on, the ways and means problems of the Treasury was furnished by Mr. Chetty, three years ago, on the floor of the Assembly, when he urged the importance of the Debt Redemption Fund being put to scientific and enlightened use.

Again, when the rupee was divorced from gold and kept linked to sterling in September, 1931, Mr. Chetty's speech was a masterpiece. In diction, delivery, eloquence, cogency of argument, due and proper emphasis, dignity and clarity of presentation, his contribution to the debate on this occasion was a unique performance, and won approbation alike from the Treasury and the Opposition benches.

This incident forms a significant landmark in his career. His activity in the Central Legislature falls into two divisions, of which this is the main boundary line. In the earlier stage, he was more interested in politics than in finance ; in the latter stage, finance has secured the pride of place in his affections and activities.

It is good that a transformation of this nature has occurred, though his elevation to the Presidential chair is in the nature of a fresh interruption.

As a politician, Mr. Chetty is, I regret to say, too ambitious to value consistency ; too intent on his own onward march to be sensitively scrupulous.

He has been, in politics, a Congressman, Swarajist, justicite, nationalist, and what not. One, who changes his affiliations so often, is bound to lose his status in the political world sooner or later—sooner rather than later.

Just when his political sympathies were exposing him to embarrassing situations, Mr. Chetty, by a lucky coincidence, blossomed into the Assembly's expert and authority on economic matters.

If one has a clear and correct understanding of the fundamentals of economics and remains loyal to them, one can attain a status independent of the fortunes of party politics, unaffected by the wrangles of sectional politics. The destiny that has looked after Mr. Chetty has been most kind, in thus conferring on him a status as a student of finance what time his political status was getting awkward.

I mean no disparagement to my friend, Shunmukham Chetty, if I aver that I would far rather trust him as a Finance Member than as a Home Member.

Politics, as it is known in India, demands self-effacement. Economics, as it is known in India as elsewhere, requires honesty. Mr. Chetty is honest but will be the first to own his inability to efface himself.

Politics, under Gandhiji's leadership, requires a pure heart no less than a clear head. Economics needs a clear head and has no contact with emotion. Mr. Chetty's strongest asset is a clear head ; and he is apt to dismiss sentiment as puerile sentimentality.

Politics in a continent of varied races, religions, castes, sects and sub-sects makes a supreme call for tact, compromise, sweet reasonableness. Economics is *sans* caste, *sans* religion and *sans* race ; it calls for sturdy and staunch loyalty to principles. Mr. Chetty is not the one to waste his time or energy in being unduly sweet or fastidiously tactful. He is blunt and sturdy.

All circumstances considered, it is all for the best that Mr. Chetty, the politician, is yielding place to Mr. Chetty, the student of economics and public finance.

I am under a commitment to discuss, from the special standpoint of the investor, the prospects of the three important protected industries, namely, steel, sugar and cotton in the immediate, near and somewhat distant future. While I have been gathering the necessary materials, reference books and relevant data for this study, I find myself pulled up by our Simla correspondent, whose letter, appearing elsewhere in this issue, holds out a threat of an excise duty as the likely outcome of the deliberations of the sugar Conference that is to be held in Simla in a month or so. The issues raised by this question are so important that I would rather deal with them to-day and postpone, to a later date, the specific investment problems connected with the three industries. Frankly speaking, to talk of an excise duty under to-day's conditions would be a mockery. The proposition seems to be that if, as a result of protection granted to certain industries, the latter do well, resulting in a substantial shrinkage in customs revenue, steps should be devised for the making up of such shortage by some manner of levy on the industries thus helped. The answer to this is that if it is true that the industries in question enjoy a prosperous era, the State would certainly benefit from such increased prosperity in the shape of more substantial income tax returns from the companies as well as the individual shareholders of the companies. The benefit, thus accruing to the Treasury from an expanding income tax revenue, should be some compensation for the fall in customs.

* * *

There are also other directions in which the State stands to gain from a higher and brighter state of national economy. This would go a long way in increasing the general purchasing power of the nation, which means that there would be brisker trade, larger exchange of goods, more traffic for railways, and more realisations from duties and taxes of various kinds. Moreover, nothing plays so important a part in the economic well-being of a country than the spirit of confidence. What is wrong with the world to-day? The disease from which the world is afflicted is, in essence, due to a crisis in confidence. Restore confidence, you will have half cured the world malady. What is true of the world is true of a section of it. If, through protection and through the betterment of suitable industries, there is created a substantial measure of confidence among a widening class of people, this achievement in itself is a factor of fundamental importance and of incalculable value. The budget of a Government may be said to be laid on true and strong foundations only when it rests on a sound and cheerful national economy. The purpose of the budget is to do all that is possible to further national economy and to do nothing that will retard it. This is the object that should be kept in view. Once such an object is adhered to by the framers of the budget, they need not worry if any isolated tax head makes a rather disappointing show. If, therefore, the Finance Member feels that increased protection means lesser customs revenue, he need not worry. He will find compensatory advantages in a number of ways.

* * *

There may, possibly, be a lag between the adverse effect on the revenue and the favourable effect on national finance. But if the policy in the meantime is correct and wholesome, there need be no concern that there is such a lag. If an industry, suitably protected, starts making good profits and yielding better returns by way of income tax and otherwise, it is no case for the industry being fleeced further. Give it more time and more opportunity to derive more strength. All that has been lost in one direction will be made up in other directions. If, on the other hand, such an industry is asked to bear a few more taxes because it can bear some, the Finance Member will be committing the same folly as did the man in the fable who, in his greed, killed the goose that laid the golden eggs. An appreciation of the standpoint I have taken in this regard will make it clear that no hasty steps should be taken in the direction of excise duty as a set-off against the loss in customs. Haste will lead to waste and, perhaps, ruin inflicted just at a time when conditions are most propitious for a real and heady growth. In any case, it is premature to contempate excise duty in regard to any of the industries for which protection has been considered necessary. So far as the cotton mills are concerned, the very idea is ridiculous as, at this very moment, piteous appeals are being made for further protection. An excise duty in the case of iron and steel is no less inopportune for this industry, though protected, is still far from acquiring an earning capacity. Of the other industries, cement and paper are doing fairly well. But in the case of cement, there have been increasing competition, large-scale dumping, and drastic cut in prices, in recent months. The cement industry in India was able to stand on its own legs because of the unified action and unified policy that the several concerns have been able to take in pursuance of the organisation of the Cement Marketing Board and its influence on the several managements. Internal competition among the companies has been successfully tackled. But competition from foreign rivals has assumed serious proportions. It will require all the energy and skill of those in charge of the several companies, to come out of the present phase of cut-throat competition. It may be admitted that, till sometime ago, the Indian Cement Industry was making good headway. There has, however, been an interruption in this onward progress. In such a situation, an excise duty would be a doubly cruel infliction. Nor can we make a song about the prosperity of the paper industry. It is only happy that it is not over-happy. Put an

excise duty, and this happiness will be transformed into misery.

Turning to sugar, it does look, on a superficial view, as though this industry, at any rate, can bear an excise duty. I have used the words "on a superficial view" with a deliberate purpose.

* * *

All that glitters is not gold ; nor all that is sweet is sugar. At the moment the prospects of sugar do seem bright. But I, for one, am not without misgivings. In fact, on a careful scrutiny of the developments connected with the floatation of a good many new concerns for taking advantage of the substantial protection afforded to this industry, I feel seriously concerned about the lack of plan in all this activity. A new class of industrialists has sprung up. Nearly 50 per cent. of the new ventures are sponsored by Marwaris, whose strong point is commercial rather than industrial instinct. As a class, they believe in large turnover, small profits and quick returns. Applying this principle to an industry, it may well be that the Marwari proprietors of sugar companies may be averse to hold up stocks but anxious to keep as light a load as possible even if this should necessitate cutting down their margins of profit considerably. I am apprehensive that because of the large number of Marwari concerns engaged in the manufacture of sugar, the price of this commodity may be forced downwards. In a place like Cawnpore, the price of sugar manufactured by Begg Sutherlands are different from the prices of sugar made by Indian concerns. As among the older companies, concerted action on certain lines and under certain circumstances was always found possible. The emergence of so many Marwaris as industrialists might mean that such concerted action in the matter of maintaining the price of sugar may be rendered extremely difficult. I do look forward to a fairly appreciable decline in the sale price of sugar manufactured by the Indian companies as and when the tremendously increased output of all the new concerns makes its weight felt on the market.

* * *

At the same time, a good many of the factories are situated within a few districts of Bihar and the United Provinces. This would result in increasing competition for raw materials. There are many parts of India, such as Madras, Mysore and Hyderabad, where most congenial conditions for the growth of sugarcane prevails and where, however, only a few factories have been started for taking advantage of this wealth of raw material and other natural facilities. The entrants into the field of sugar manufacture have not distributed their activities over all the likely and suitable parts of India. Most of them have concentrated their attention in a few well-known districts of Northern India where the existing sugar companies had been enjoying a thriving trade. This over-crowding should lead to some measure of scarcity of raw material, which, as a consequence, should become dearer. In the next year or so, I foresee a considerable reduction in the margin of profit, due to the lowering of the sale-price of the manufactured goods and the rise in the purchase-price of the raw material.

* * *

Moreover, a good few of the new concerns are god-fathered by men who are totally new to the technique of industrial management. They should, possibly, be making many mistakes in the beginning. Allowance for this factor has to be made in the estimating of future profits. The managing agency terms, in the generality of cases, are also far too onerous. The usual terms are somewhat as follows :

(1) Rs. 500 to Rs. 1,000 as office allowance ;
(2) 10 per cent. on net profits ; and
(3) 1 per cent. or even more on gross sale proceeds.

After the satisfaction of these exactions by managing agents, the divisible profits should be adversely affected. All factors considered, it is too soon to enthuse over the rosy prospects of the sugar industry. Let me, at this stage, sum up my conclusions :

(1) Sugar companies, established in the pre-protection period, have made rapid progress and very substantial profits in the last two or three years owing to the steep increase in import duties on foreign sugar.

(2) The sugar manufactured by them was barely one-tenth of the total Indian demand.

(3) The firms engaged in this manufacture were only four or five, so that they always acted in unison.

(4) After the new concerns reach the full productive capacity, the domestic supply will be a third of the domestic demand. Keener competition is bound to ensue.

(5) Control of sugar manufacture has passed from the few to the many. Union amongst all of them is a less easy matter.

(6) For these and other reasons, it would not be safe to rely on a continuance of the present margin of profits.

(7) To decide on excise duty on the assumption that the margin of profits will not be appreciably affected will, therefore, be wrong and hasty.

* * *

The sugar industry, which, on a superficial view, looks like being able to bear an excise duty, is yet in the process of development ; and the factors connected with such development require careful watching in order to ensure that an industry, so propitiously started, has no occasion for setback or retrogression. In the case of an industry so delicately poised, any change in the plan of protection is to be deprecated.

* * *

If the Finance Member is badly disappointed over the customs returns from sugar, it is not the domestic production that is the only contributory factor. Owing to the lowering of the economic stamina of the masses, the consumption of sugar itself has shrunk greatly. I believe that, as compared with three years ago, India consumes 30 per cent. less of sugar. It is the increasing poverty in the country that should take a good part of the blame in this regard. Instead of turning his attention to excise duty, Sir George Schuster will do will to devise ways and means for the betterment of the economic condition of the teeming millions of India. I should, also, warn the authorities against a facile recourse to excise duty on this ground more than any other that the very word "excise duty" has the most unpleasant associations and evokes the most bitter memories in this country. The excise duty on cotton manufactures was responsible for more rancour and misunderstanding than any other fiscal measure. There is only one other phrase that has a like odious association—and that is "Reverse Councils." Excise duty should be avoided at all costs—at any rate, till you have unmistakable evidence that the protected industries have established themselves on a secure and unshakable footing.

* * *

I am being asked to explain, in simple terms, the purpose and prospects of the World Economic

Conference ; the part India may play in its deliberations ; and the significance of its outcome to this country. Most people have a presentiment that the Conference would be a failure. Our Simla correspondent said, in one of his communications, that the Secretary of State urged this factor as the main reason for the floatation of the sterling loan, explaining that delay in this regard might mean that India Office might have, at a later date, to negotiate the loan terms amidst conditions rendered unpropitious by the failure of the World Economic Conference. Is there any ground to apprehend so futile an end to a Conference on which the hopes of the entire world are now centred? What are these fluctuating fortunes reported, day to day, in regard to the proceedings of the Disarmament Conference? What is the bearing of the latter on the Economic Conference? Lausanne was responsible for definite agreements, as between the European nations, on War Debts and Reparations ; is any early confirmation likely? Amidst all this nebulous talk in America on War Debts, can any definite conclusion be drawn in reference to the June instalments payable by the Allies and the attitude of the new President to any plan of cancellation or reduction of the Debts? Amidst all this nebulous talk of rehabilitating silver, will the white metal be really helped to attain a measure of its old importance and value? With countries engaged in tariff wrangles and race in currency depreciation, can more settled and stable conditions for international trade be created in the near future? These are some of the posers that confront us when we enter on a discussion of the purport and probable destiny of the World Economic Conference.

* * *

Naturally, America occupies a dominant position in this affair. At one stage, she was inclined to be insular, lukewarm and anxious to be spared from European intrigues and complications. She has come to realise, however, that she has no choice in the matter. Willy-nilly she will be drawn into world politics and finance. The Almighty dollar and the cocksure Yankee of 1928 aree represented by pale and emaciated selves, by mere shadows, in 1933. In this chastened mood, the United States, under the leadership of President Roosevelt, will take an active and genuinely helpful part in the forthcoming Conference. America has cause to look forward to its outcome with as much hope and wistfulness as any other country. Once she realied this in a vivid manner, she started taking steps to ensurue for herself a position of the most strategic importance in the Conference. Even otherwise, all the other nations would always listen with respect and attention to what the puissant American has to say. By the un-linking of the dollar from gold and depreciating its value, America has made doubly sure that the tactical advantage and the chief bargaining power rests with her.

* * *

At the early meetings of the preliminary committee held nearly six months ago in Geneva, Britain with her sterling divorced from gold held the whip-hand. The position on the present occasion is considerably changed. The main bone of contention before the preliminary committee was the return of Britain to gold standard. Now, two leading countries have to be coaxed and cajoled to fresh renewal of loyalty to glittering gold. The bargaining power of England has still further been reduced by the fact that she can no longer plead inadequacy of gold stocks. Assuming that the foreign gold exchange balances of the sterling equalisation fund are repatriated in the form of gold, the Bank of England should have anything like £250 million of gold, valued, let it not be forgotten, on the basis of 84s. per ounce. It is as clear as noonday sun that Britain will not stabilise her currency on the old parity. The new parity would mean that the sterling price of gold would be in the neighbourhood of 120s. per ounce. The gold stocks of the Bank, revalued in accordance with the new parity, would, therefore, amount to well over £350 million. With her reserves so ample, Britain would be hard put to find excuse for postponing the relinking of her currency to gold. As for America, there was no case at all for her abandoning gold. I believe that in the very first encounter, a plan of currency stabilisation on the basis of new parities in the case of the important "off-gold" countries will win unanimous approval. An achievement of this kind, of which I have no doubt in my mind, will have a profound psychological effect on countries like France, Holland and Switzerland ; and from this point onwards, their attitude would show a surprising change for the better. With goodwill created by a timely gesture, the subsequent proceedings are assured of a more favourable atmosphere. Of the two uncertain factors in international trade, currency depreciation may, thus, be disposed of at the very outset. The next factor is tariffs. Here also a Gentleman's Agreement of a truce has been arrived at. Every attempt will be made and can be made to work out the terms of the truce on definite and concrete lines. Aggressive nationalism and profound hopes of economic self-sufficiency would, doubtless, cause complications ; but there should be no great difficulty in securing acceptance for the proposal that existing tariff walls are not to be raised further. It is true that this is but a negative achievement. However, the real meaning of such a proposition is that it will further improve the psychological factors for the success of the economic conference.

* * *

At this stage, we have to consider the twin issues of war debts and disarmament. America's case has been that so long as the European nations can find large sums for armaments, they have no face to demand any concession from America as regards war debts.. If they are able to find the requisite resources for what they consider a national need, they should be all the keener to put themselves in possession of the funds needed for the discharge of international obligations. If, therefore, the European nations are prepared to carry into effect a substantial measure of reduction in expenditure on armaments, America would be prepared to give favourable consideration to the demands for the scaling-down of inter-Allied debts. This takes us to the long-drawn out deliberations at Geneva. Germany is truculent one day; France is scheming the other day; Turkey throws a bomb-sheel on the third day; and Japan attempts "shock tactics" on the fourth day. This is the kind of day-to-day diary that has to be kept of the Disarmament Conference. Is there and hope of a successful outcome amidst wrangles so many-faced and amidst motives so sinister and absruse? Tearing aside all the non-essentials, it is possible to realise that the main essential factor today is that the British scheme has been agreed to by such prominent Powers as America and Germany. France has thus, been isolated. It may be said that she has been put in the wrong. For the time being, it looks as though she is trying to rally to her side countries like Turkey and Japan. But the voice of Turkey cannot command great attention. As for Japan, her attitude to the League after the Lytton Report is not such as to make her count a great deeal in world discussions for world peace. In the result, France would soon realise that her supporters carry no weight ; and that she, by continuing obstreperous, would be antagonising all the other Powers. That recognition should dawn on France in the next few days. When that recoguition comes, France's assent may be taken as a foregone conclusion. In other words, I am fully hopeful that despite the alternating fears and hopes generated by the Conference proceedings, the Distrmament Conference would be able to arrive at a substantial measure of common agreement on fundamental principles and policies of disarmament. I am so sanguine as to hope that ere the World Economic Conference sits, Mr.

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

Head Office:

* * *

From the point of view of Disarmament, therefore, there is every ground to hope that America will relent in her attitude as regards inter-Allied debts.

* * *

The recent trend of opinion in the States is inclined to reduction of the debts though the nation is adamant against cancellation. By tactful handling, America may be induced to reduce her debts to 25 per cent. or so of the old Arrangement ; and after such a settlement is arrived at, the debt may be put on a commercial basis. That is to say, as soon as favourable conditions set in in the bond market in America, dollar loans for the finally agreed amounts on the part of the various Allies should be issued in the States for public subscription. These transactions would, thereafter, cease to be inter-governmental affairs but be in the nature of commercial loans. There cannot be any room for friction or unpleasantness. I foresee developments in connection with war debts to be on some such lines as I have indicated. It may be necessary to effect a few consequential changes in the Lausanne agreement. But there can be no doubt that inter-governmental debts are bound to be reduced to a size more in consonance with stern realities.

* * *

As for silver, it is not a matter on which any great difficulty can be experienced. Everyone is agreed that revival of the price of silver will make all the difference to the purchasing power of China and India which contain half the world's population. At the same time, there are not many advocates of bimetallism as such. While silver will never be raised to the same status and prestige as gold, the white metal may, however, be sure of having a more important place in the monetary structure of the world. Definite measures in this regard have been proposed ; and there has been hardly any criticism of such measures. America has given a lead in this matter by agreeing to accept a moiety of the war debt instalment in silver. The other country in the world, from which an equally significant lead is expected, is India. Our authorities have, however, expressed no definite views in this connection. I learn, on good authority, that the Indian Government are the stumbling block. I cannot understand this. India is not interested in depreciating the value of silver. She must co-operate in all plans for the improvement in price and the enhancement in status of silver. I have good reason to think that even while these discussions are going on, the Government have been steadily selling silver. Possibly, these sales are in the form of alloy silver to such foreign countries as are buyers of the white metal for coinage purposes. That is, the silver sold by the Indian Government has not come on the market. But the fact is that while serious talks are taking place as regards the bright destiny for silver, the Indian Government have vouchsafed no indication of their appreciation of the importance of the problem. In my view, it is on the silver question that the representatives of India at the World Economic Conference could make effective and fruitful contribution.

* * *

I repeat that the proposal that should be put forward is the one that *Indian Finance* discussed more than two years ago. An agreement between America and India should be concluded whereby India undertakes not to sell silver for the next twentyfive years from her currency reserves and America agrees to give a gold loan for, say, 100 million dollars redeemable after twenty-five years and at a low rate of interest. America can afford to spare the gold ; the influential silver interests will support the American Government and, if necessary, subscribe for such a loan. The national wealth of America will be greatly increased by the assured prosperity of her large silver industry. India has no particular cause to be in a hurry to sell silver. She need not in fact, sell silver at all. The real purpose of the sales of silver was the acquisition of gold, but this purpose has not been fulfilled. For the past six years, our Government have been disposing of silver ; but have they strengthened our sterling or gold resources in any tangible manner? We have lost our silver and got no gold or sterling in its place. That is the plain and brutal fact. Under these circumstances, there is no justification whatsoever for the Government continuing to sell silver. If, without selling silver, and just because India agrees not to sell silver, she can secure the requisite gold for her currency reserves, she will be killing two birds with one stone. The reserve bank problem comes directly into the realm of practical politics. At the same time, the very withdrawal of the Indian Government as a seller from the world silver market would result in a considerable enhancement of the price of the white metal so that the assets in silver not only in the hands of the masses but in our currency reserves would show a substantial improvement in value. If I were the spokesman of India at the World Economic Conference, I would press this suggestion with all the eloquence and emphasis, I can command. But, then, Indian representation itself is still an imaginary proposition.

* * *

To sum up :

(1) Britain and England and a good many countries in the sterling area would agree to the stabilisation of currency at the World Economic Conference in the very early stages ;

(2) The British scheme of Disarmament would be, without any great alteration, accepted by all the nations ;

(3) America will let off a good proportion of the war debts and arrange for the commercialising of the sums ultimately agreed upon ;

(4) A general acceptance for no further increase in tariffs will be arrived at ;

(5) Silver will have a rosier prospect.

Cynics and Jeremiahs notwithstanding, I have every confidence that quick, sharp and fruitful decisions on lines somewhat as indicated above, would be reached at the World Economic Conference. This would be the only but complete cure for the crisis of confidence with which the world is afflicted. Once confidence is restored, the upward trend in prices and in general well-being will become more marked. The very abandonment of gold standard by America has caused a miniature boom in which Indian commodities like jute and hessian have been favourably affected. If a major boom is to be the result of a successful termination of the Conference deliberations, the world has to gain, and with it India, in the era of chastened optimism and regulated prosperity.

* * *

I learn, subsequent to my dictating my story on the Economic Conference, that the Editor is himself airing his views on the same topic. As there would appear to be considerable difference in the two standpoints, I have to make it clear that the views I have put forward are my personal views, though I must add that my dream of the future has every likelihood of materialising.

* * *

The elephant has stumbled again. My remarks in the last issue about the three spinning mills of Kettlewell Bullens, require to be modified. Last Saturday, I was studying the financial position of the cotton mills and the sugar companies from the facts and figures furnished in the *Investor's India Year-Book*. I had stated that weaving sheds would have to be added to the three mills managed by

OLYMPIA

Triangular contest: Protection with one hand and Excise Duty with the other: Kisch triumphs: Alwar and Nemesis:

(From Our Correspondent).

Simla, May 24.

A triangular contest is on here regarding Sugar industry. Now that Sir George Schuster is not certain that he is going to London, he is reviving the idea of a Conference of Directors of Industries in the various Provinces and of the Ministers in charge of this *port folio*.

* * *

The contest arises like this. Sir George Schuster finds that the sugar interests are making huge profits at the expense of the consumer and that the Government of India must, in the interest of the taxpayer, have a share in the sugar proceeds. He has already hinted at the possibility of an early imposition of excise duty on sugar. That as our industries grow and customs revenue fall, recourse would be had to excise duty goes without saying. But the point is this: At what stage should this process begin and who should be the first victims?

* * *

The issue is not merely financial. It may have very important reactions on the other spheres. How will it affect the authority of the Central Advisory Council for Agricultural Research? The Chief of the Finance Department may be having his own schemes to reduce the authority of this Council or to make it play up to his point of view.

* * *

Sir Fazli Hussain will have a big say in the matter. He will see to it that the provincial sphere is not raided and that the Finance Department does not interfere with the developments which the Department under his own charge has been promoting. He has, probably, fallen into line with his colleagues in the hope that the Conference would at any rate give him a majority of Indian colleagues who would strengthen his hands in figthing the purely financial point of view.

* * *

Sir George Schuster *versus* Sir Fazli Hussain *versus* Provincial Ministers. An epic fight, by all tokens.

Since I wrote last week on the Sterling Loan, I have made enquiries as to how the loan came to be floated. I suggested then that the Finance Member may be ignorant of it. Well, I can now say confidently that is not the case. At a time when the question of some sort of financial autonomy for India is being discussed, the Secretary of State was bound to consult, or at least to inform, the Government of India's Finance Minister of what he was proposing to do.

* * *

If I had said that the Government of India was ignorant of the coming loan, that would have been quite correct. But, then, I am told that the Government of India, as such, is always ignorant of loan operations. The various Members of the Viceroy's Council generally read the loan announcement for the first time in the press. That is to say, if they care at all to read prosy loan details. This is administrative self-government *par excellence*. So, this particular instance of ignorance cannot be over-emphasised.

* * *

The point to be stressed is that the Finance Member, knowing that such a loan was proposed to be raised, could have fought against its issue. Probably, he let things drift or, perhaps, thought of the protest too late. Anyway, he now realises that it was a bad business and has brought him unpopularity at a time, when he was living on the laurels won in the Assembly last session during which various members of the Opposition asked for his tenure of office to be extended.

* * *

And, at this juncture, the pen picture of the Finance Member, given by "Eavesdropper" in your columns, has lent piquant interest to the controversy, and has made it more intelligible to the man in the street than it would have been otherwise.

* * *

It is unfortunate that disappointments should come to the Finance Member in such quick succession. The sterling loan was an unwise move; and now the decision to have India represented at the World Economic Conference through experts chosen in London by the British Government is a cruel snub. Sir George Schuster and Dr. Meek were hoping to be able to proceed to London immediately and some ministers and unofficial experts had, as usual, taken pains to canvass support for themselves. Sir Jogindra Singh was mentioned among the ministers and one or two economists were in the field. So Mr. Kisch has scored once again.

* * *

Alwar. Well there is nothing that can be said now with advantage. The Maharaja stood out for his "sovereign rights" and the Paramount Power held that his rule was a clear "misrule." The test could have been applied; but, then, what would be the test? The Maharaja fought till the end and has retired, hoping that, in two years, Federation will come and he will have his chance then.

* * *

The Government of India authorities are bitter about the support the Maharaja has received from the Hindu press. Very soon we may see a counter-attack in the columns of some Muslim paper when "astounding facts in our possession" may be revealed unofficially by the Paramount Power. Meantime, there can be no gainsaying the fact that the Maharaja was a bumptious, autocratic ruler who talked big about his subjects but in whose scheme of jaunts, shooting excursions, and extravagant living, the over-taxed people were there only to be over-taxed.

* * *

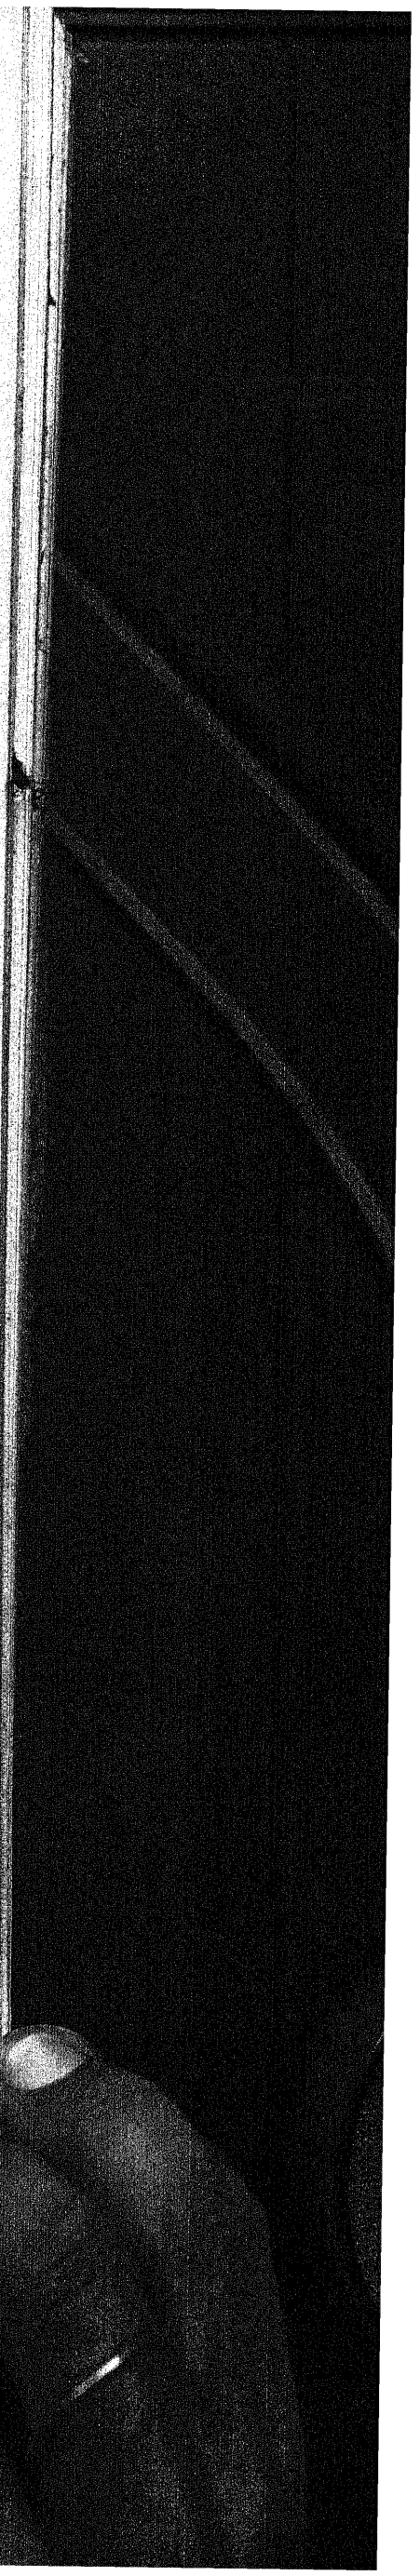
The Maharaja was spending money gaily and lavishly; but every big tradesman or firm knows what a job it was to collect bills from him. There used to be a perennial crowd of such representatives in Alwar Guest House (board and lodging paid by themselves), eagerly endeavouring to collect at least a moiety of the dues. His Highness was too big and too unapproachable and too busy. His officers were experts in evasive tactics. And the representatives engaged on bill-collectors' errand used to loiter about the place for a month or two and return to their other work, sadder and poorer men.

* * *

As for officers and staff, the salaries were being paid in irregular and quixotic fashion. This is the Prince who used to advertise, at frequent intervals, in all the dailies of India, for all kinds of highsounding "jobs" at salaries calculated to make the mouths of the hungry unemployed water! The applications should be sent, the advertisement would emphasise, with photographs which will not be returned. Ubiquitious applicants of this country for all manner of vacancies ceased to take interest in these blatant "Wanted" ads.

The Maharaja had scarcely any redeeming feature. And, yet, this is the ruler of whom a Secretary of State for India waxed eloquent as though he was the last word in human perfection. What will that Secretary of State be saying now? But for the political troubles in British India, not only the Maharaja of Alwar but a few of his compeers would have been pulled up, smart and sharp, long ere this. They owe their luck and their safety to the Mahatma and the political conditions he has created.

"HILLBIRD."



OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

The forthcoming World Economic Conference is the natural focus of all attention. Opinion in regard to the value of the Conference has not, however, changed. It is felt that unlike the previous sessions, the present meeting at London has been founded on a more intimate understanding among the Powers. While, on the one hand, there is a keen appreciation of the need for common feeling for a common purpose, there is also the anxiety that in the inevitable diplomatic puzzles, that are already well on their way, Great Britain has not suffered any loss of a strategic importance. With the Premier so constantly on his foreign tours and indulging in language that is too sentimentally liberal to gain or keep the practical advantages, there is even a feeling of nervousness lest the American and the Frenchman should get the better of the Britisher in his unguarded moments. The statements of the Premier on the subject of the World Economic Conference, and particularly his talks with President Roosevelt, are, therefore, awaited with keen interest and, when they are available, scanned with the utmost scrutiny.

Concurrent Talks on War Debts.

The Premier's statement on the evening of Tuesday, the 9th May, has, it must be confessed, created a feeling of disappointment. It is felt that he missed his opportunity for stirring up even a moderate enthusiasm for the World Economic Conference. The greatest dissatisfaction is felt over Mr. MacDonald's consent to the exclusion of the question of war debts from the scope of the Conference's formal discussions. Mr. MacDonald has, however, assured the public that there had been complete unanimity of opinion that the Economic Conference should not be fully successful unless the debt difficulty has been removed before it sits. But he wished it to be quite clear that the question of war debts would not come before the Conference. People naturally argue that, if negotiations have only to go on "concurrently and on parallel lines," it is impossible that the debt difficulty could be removed before the Conference sits. It is only fair to the Premier to recognise that he had to accommodate himself to a President who, despite all his personal enthusiasm for a speedy settlement of the debt problem, has still a formidable opposition to encounter.

America offere to join peace talks.

Another important announcement in the Premier's speech was that the United States Government was now prepared to play a further part in the tranquilising of Europe. Provided the Disarmament Conference came to anything like a satisfactory issue, America would take her part in consultative pacts, the effect of which would be to increase the security of Europe and the safety of the threatened nations against war. No one, who has followed American foreign policy since the War, could overlook the enormous advance which this change implies. The effect of this announcement would be that those who have been harping on security during these years, will be left without any pretext for withholding from the Disarmament Conference their sincere co-operation.

Tariff Truce and Trade Treaties.

It is in respect of the tariff truce that Mr. MacDonald may be said to have scored against America. The formula orginally favoured by Mr. Roosevelt did not answer the requirements of Britain, as she has been engaged during the last one month and more in negotiating a number of trade treaties most of which have been concluded and some have been actually ratified by the Government. There can be no doubt that consent to the tariff truce would mean that the fruits of all the arduous work would have to be thrown away. It speaks well for Mr. Roosevelt's spirit of accommodation that he should have consented to a change in the formula, which would permit the British Government to conclude the negotiations and to give proper effect to them by the requisite changes in tariffs. The principle, that applies in these cases, is that, where a nation is still negotiating and still working out policies, the principles would not prevent the continuation of the work begun. The starting of new initiatives in some new directions would be suspended until the prospects of success at the Conference were ascertained. But Mr. MacDonald can hardly be said to have scored a point for the Conference. For, the clause referred to would presumably cover not only the treaties signed with Denmark, Germany and the Argentine and treaties awaiting signature with Norway and Sweden but the general negotiations with Poland, Finland, the Baltic States, Iceland, Netherlands and Japan as well as the long-deferred agreements on the restriction of daily produce imports.

Overseas Trade.

The returns of the overseas trade in April at first sight are very disconcerting compared with March. Exports in April amounted to £29,933, 000 against £36,533,741 in March and £39,423,098 a year ago. Total imports in April were £51,151,000 against £56,346,447 in March and £53,570,112 a year ago. In interpreting these figures it is necessary to remember that the figures are not strictly comparable, as the Easter holidays fell during March in the previous year and during April in this year. April had thus 23 working days as against 27 working days in March, 1933. If the figures are expressed as daily averages, it would be found that in April, 1933, exports amounted to £1.15 million against £1.21 million in March, £1.16 in February and £1.12 million in January and a "high" of £1.34 million in 1932. As for imports, the daily average in April was 2.22 million against 2.08 million in March and January and a "high" of 2.08 million in 1932. Thus exports in April were not much worse than in its immediately preceding months.

Though the initial feeling of consternation following a fall of £7 to £8 million in exports may thus be overcome, it is not easy to persuade oneself that all is well with Britain's foreign trade. Exports of manufactures are unmistakably lower than can be accounted for by the lesser number of working days. If it is true that overseas trade is not much worse it is also true that it is no better. If we take the figures for the first four months of the last three years, it will be found that coal has decreased from 14 million tons in 1931 to 13.09 million tons in 1932 and 12.19 million tons in 1933. Iron and steel manufactures have decreased from 669,052 tons to 653,953 tons and 572,102 tons respectively. Cotton piecegoods have, no doubt, improved from 573.6 million square yards in 1931 to 762.2 million square yards in 1932 and 772.8 million square yards in 1933. The decline in yarn exports should be further accelerated by the duty that has now been imposed on fabric gloves. The aptest comment on the April trade figures is that of the *Economist* which says in its issue of May 13: "Viewing the trade returns as a whole, they certainly suggest that we are coming to the end of the lease of life granted to us by the suspension of the gold standard and the tariff. Indeed, they warn us that in the interest of our own solvency we should strain every nerve to ensure that the World Economic Conference leads to a general stabilisation of currencies and removal of trade barriers—ends towards which we ourselves have an important contribution to make."

Air Mail Week.

The returns of foreign trade are thus not a matter of pride to the Government. At best they can be interpreted as showing that Britain has not lost further ground during the last few months; and this is not much of an achievement unless it can be shown that other countries have lost; and even if other countries have lost, the achievement does not help but rather hinders the revival of world trade. The Government could however plead that the test of their new trade policy is not the volume of foreign trade, but the state of internal employment and prosperity. For imports at any rate must suffer with the institution of a protection-cum-quota policy. Where they must accept defeat is in point of the reduction of imports. The *Economist* justly claims that its forebodings in this regard have proved only too true and that recent experiences should warn the Government against any further persistence in what they call their new model trade policy. But the Government would naturally try to shift the emphasis to the fall in unemployment and try to make out that by itself it is a sufficient vindication of their economic policy.

April showed a further decrease in unemployment, following decreases of 80,454 in March and 46,427 in February, the figures issued for April 24 show a decrease of 78,550. At that date the total was 2,697,634, composed of 2,070,814 wholly unemployed, 527,418 temporarily stopped, and 99,402 normally in casual employment. Unemployed men numbered 2,169,128, boys 68,858, women 405,700, and girls 53,948. The total of 2,697,634 was 45,453 more than that of a year ago. It is estimated that at April 24, there were approximately 9,534,000 insured persons aged 16-64 in employment in Great Britain. This was 91,000 more than a month before and 92,000 more than a year before. The improvement in employment occurred chiefly in the building, public works contracting, tailoring and distributive industries, in brick and tile manufacture and in the dock and harbour, road transport, hotel and boarding house services. Employment also continued to show some improvement in general and marine engineering, in iron founding, shipbuilding and ship-repairing, and in the cycle and motor vehicle industries. There was a further decline in coal mining and in the cotton and hosiery industries. A slight setback also occurred in the iron and steel, pottery, jute and boot and shoe industries and in textile bleaching, dyeing and finishing.

Repatriation of the Control of Boots'.

The Control of Boots Pure Drug Company has at last been repatriated; and this time the deal was planned and put through in such a manner that it cannot be frustrated by the Treasury even if it were so inclined. Looking at the final event there is cause for gratification, rather than regret, that on the last occasion, the Government imposed its ban on the issue. For, the present deal is even so much more advantageous to the British interests than the former one. The negotiations which were terminated last January by the Chancellor's embargo have now been concluded by a group organised by the Tobacco Securities Trust, Sir James Dunn and Messrs. Rowe, Swann & Co. There was at first little or no inclination on the part of the market to reopen negotiations in this regard; for the methods adopted by Mr. Liggett, the Chairman of Drug Incorporated, in the previous negotiations for the sale of Boots' annoyed the city which disliked his attempt to conduct what has been described as a Dutch auction. He opened up secret negotiations with four or five leading financial houses and successively played off the intending parties against one another. But unfortunately, his profitable deal was dashed off his lips at the last moment. Sir Hugo Cunliffe-Owen and his associates worked through the Tobacco Securities Trust and made an offer to Drug Incorporated to purchase a quarter million shares in Boots. He also required an iron clad option extending over five years on a further 750,000 Boots shares; and Drug Incorporated accepted the condition. The break in the dollar, which was not unforeseen by British negotiators, induced them to exercise their option earlier and they have now been able to acquire control at a price of £6-5 per share. It must be remembered that under the January deal, the British interests were to purchase the shares at a price of about £7-15. The return of the control of boots is generally regarded with feelings of genuine satisfaction. Although the price paid for the shares is considerable, it is felt to be more than reasonable in consideration of the worth of the company's assets.

UNITED STATES OF AMERICA.

IS IT THE REVIVAL?

There is something hesitant and apologetic in America's defence of her action regarding the gold clause. She feels she has an unquestionable right to alter her currency as she likes; and the foreigner's talk of the light-hearted abandonment of the gold standard does not disturb her. But in regard to the gold clause, there is an unexpressed feeling that the Government are not on such sure ground. Bankers could not dispose of claims without a reference to the clearing banks association; and this body soon asked for and got an intimation that the Treasury forbade payment in gold or its equivalent in currency. Mr. Roosevelt has felt called upon to make a public defence of his action in the speech which he broadcast from the White House on May 7. As may be expected, he urged the substantial justice of repayment of debts in the same kind of dollar as was borrowed. "The Administration has the definite objective of raising commodity prices to such an extent that those who have borrowed money will on the average be able to repay that money in the same kind of dollar which they borrowed." He added, however, that the other extreme of repayment in a cheap dollar would also be avoided and that the administration would see to it that "debtors are not able to pay back a great deal less than they borrowed." The powers about to be given him by Congress would be "used when, as and if it may be necessary to accomplish this purpose." This is reasonable enough, though the victims of the "gold clause fraud," as it is called in Britain and most other foreign countries, might well feel that the caluse sought to provide against precisely this kind of autocratic equity. But Mr. Roosevelt might feel he had explained the position and had gone far to compensate one "wrong" by the assurance of protection against another. But he has apparently weakened his case by supplementing a sound argument with an unsound one. He urged that "If all holders of these promises to pay (in gold) demanded payment in gold, only about one in twenty-five would get it." This has little relevance when none of the claimants under the gold clause asks for bars of metal. When the claim is restricted to the premium in dollars on gold, Mr. Roosevelt's argument does not apply at all.

Original Value of Present Debts.

Anyway, it is a great gain that the Administration has made up its mind to fix a limit to the inflation and rise of prices which they would engineer. The practically-minded, however, would pause and wonder how Mr. Roosevelt is going to fix that golden mean—less gold and more mean, the dupes of the gold clause would perhaps, say—and avoid error on

Air Mail Week.

either side. Repayment in the same dollar as was borrowed means that one ought to be quite clear as to the time at which the bulk of present indebtedness was contracted ; and once that could be found, it would then be a question of raising prices to the same level as obtained at that time. In the historic controversy of Britain's return to gold, Mr. Keynes essayed the same task and found that the return to pre-war parity was a substantial injustice to a large mass of debtors. In America the same task has now been attempted by the Moody's Investors' Service of New York ; and their study points to the conclusion that the average price level of 1930, rather than that of 1926, is one at which the present outstanding corporate debt in the United States was created. By analysing, issue by issue, over 36 billion bonds, the authority established a composite average weighted level of commodity prices at which this total debt was contracted. This level is 85, or that corresponding to the average level of prices in 1930, with 1926 equal to 100. For the railroad debt, which was created relatively early, the equivalent is 74, for the utility debt 87.5, and for industrial and real estate issues (not including "straight" mortgages) 92.5. These figures compare with the index of prices of the Bureau of Labour, which was 100 in 1926, and is around 60 at the present time. Two-thirds of the present corporate debt were created since 1921. The farm mortgage debt was apparently created at an average wholesale price level only slightly higher than that of the utility.

Inflation—a Crude Instrument.

But the authors proceed to point out that the price level at the time the debt was contracted is not the only relevant or important consideration. The ability of debtors to earn interest charges is an important point ; and this varies a great deal from one class of debtors to another. And obviously, a uniform amount of inflation is too crude an instrument for that selective process without which the debt problem cannot be adequately or equitably solved.

"It is a mistake, therefore, to argue for a given ratio of inflation on the basis of the price level at which the debt originated. The original programme of President Roosevelt was a sound one in that it opened the way for a speedy selective readjustment of debts at the same time that it aimed at a revival of business and prices. There is a clear danger in abandoning this policy in favour of inflation, pure and simple, because the latter has no power to settle all human relations in a perfect way and it is sure to create new inequalities, a forced settlement of which would become inevitable sooner or later."

But none of the niceties of currency policy and objective mentioned above seems to worry the mind of President Roosevelt at the present moment. It looks as though the President is now content to acquire the powers for an inflationary policy and to create a strong bullish sentiment by the mere talk of inflation. More than that, the practical policies have not been clarified. And it is just possible that, when, as in Britain, the Government becomes somewhat disillusioned about the immediate effects of inflation on the price level, they would fall back on a course of action similar to what is indicated by the Moody's Investors' Service.

Mr. Roosevelt's Optimism.

The other points touched in President Roosevelt's broadcast talk are the Farm Bill and his conversations with the foreign envoys. Mr. Roosevelt said that "the farm relief bill provides that its inflation provisions contain powers for emergencies but the extent of its use will depend entirely upon what the future has in store." It is not clear whether

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

Air Mail Week.

Mr. Roosevelt expects that he would not have to use all such powers. But he affirms that "the improvement within the last two months has been considerable." "Industry," he said, "has picked up. The rail roads carry more freight and farm prices are better." "But," he added, "I am not going to indulge in issuing proclamations of very enthusiastic assurances. We cannot ballyhoo ourselves back to proseprity. I do not want the country to take the foolish course of letting this improvement come back on another speculative wave. Such a course may bring us immediate and false prosperity that will lead us into another tailspin." These are words of sound commonsense. But the tasks before the World Economic Conference require even more uncommon qualities. But so far, the President has had no check ; and it will be seen that he has secured some measure of progress in all the four great objectives which he had set himself in his conferences at Washington :

> "The international conference must succeed. The future of the world demands it, and we have each of us pledged ourselves to the best joint efforts to this end." The conferences in Washington recently had four great objectives, said Mr. Roosevelt. They were :
>
> 1. A general reduction of armaments, and through this the removal of the fear of invasion and armed attack, and at the same time the reduction of armament costs, to help in the balancing of Government budgets and the reduction of taxation.
> 2. The cutting down of trade barriers to start the exchange of crops and goods between the nations.
> 3. The setting up of a stabilisation of currencies, in order that trade can make contracts ahead.
> 4. The re-establishment of friendly relations and greater confidence between all nations.

Rumours re. War Debts.

It is noteworthy that in his somewhat lengthy broadcast, Mr. Roosevelt studiously refrained from any reference to the question of war debts. A highly intriguing situation rules to-day in regard to this question. Mr. Roosevelt, it is well-known, is personally inclined towards a moratorium, at least during the discussions of the World Economic Conference and the concurrent talks at London. But as a politician and, what is more, as a President with a large programme of constructive work and, practically, the whole of his term of office yet before him, he has to watch the temper of the Congress and suit his actions thereto. Such a situation is, indeed, ideal from the standpoint of those who create news. All sorts of rumours have been set afloat. Not only is there in certain quarters a confident assertion that the President has decided on a moratorium, but it has also been suggested that America has submitted a proposal to France, by which war debts would be settled in a lump sum payment, instead of sixty annuities. The method of settlement, according to rumour, is payment of one-third of the lump sum in gold another third in special bonds, the balance a little later through the Bank for International Settlements. This report has been promptly denied by both sides, by M. Herriot in France and by Mr. Cordell Hull in America. Mr. Hull also denied that he had sent any orders to Mr. Norman Davis who, he said, was, in a sense, a "freelance."

How to deal with Congress.

The exact position to-day is rather difficult to appraise. It was significantly stated at the White House that "President Roosevelt was personally handling the war debt problem." This by itself can mean nothing. The whole question is one of the exact way in which the President would deal with the Congress. There are some who believe that, if the President adopts the straightforward course of approaching the Senate for powers to revise war debts, the Senate would not refuse it. Others there are who believe that, whatever the Senate might be prepared to do, the President would not take such a course. There is yet another section which thinks that for Mr. Roosevelt to introduce this question now would be to commit political suicide. Nothing but drift can show a way out of this *impasse*. To allow the nations to default, with a hint that Mr. Roosevelt, at any rate, would not be estranged by such action, and then to continue the talks up to the point of some sort of revision would mean a situation on which even the most intransigent Congressional opinion will not be able to demand a going-back. Who knows if this course has already clarified itself in the mind of the President?

The latest, however, is the report that France has offered to pay the defaulted December instalment if America would agree to a moratorium for the duration of the World Economic Conference.

The Pull-up in Prices.

These questions of the future somewhat pale into insignificance beside the strong sentiment of optimism that rules in America to-day. The President himself referred to industry "picking up" and freights increasing, though he was careful to balance these statements with a note of caution. And there are others who have taken an even more decided opinion. Mr. Henry Ford declared the other day that America's face is "at last set towards the future" ; and what is more, he has responded to the President's appeal made last week for an increase of wages. In fact, wage cuts have been restored in many industries. The steel industry has had six consecutive weeks of increased business ; and the *Iron Age* exhorts the industry to be prepared for better times and states that heavy industrial consumer buying has set in. The stock exchanges have seen consistent increases, which are also alround, and and rises at the end of the week are remarkable as they have occurred in the face of heavy profit-taking. Commodity prices have also kept pace ; and it is believed that a setback will be prevented by the Administration, which is now invested with absolute powers to restrict area or output, the Secretary for Agriculture, according to the Farm Bill, being a commodity Dictator analogous to the President's dictatorship in matters monetary.

Agricultural Relief.

It is necessary to urge that the background of popular contentment, or rather absence of popular discontent, will also be conducive to the preservation of this optimism. For the President has finally signed the Farm Bill ; and he has already given a foretaste of the vigorous measures he would take in the cause of Agriculture. He has taken immediate action to prevent further foreclosures of agricultural mortgages. He has also summoned the big insurance companies to a conference at Washington, where they will be asked to convert the mortgages they hold into new Farm Land Bank bonds as part of a nation-wide conversion scheme. The National Farm strike, referred to in these columns last week, has, therefore, been postponed by a month. Proposals to tax tea, coffee and other staples to provide funds for the service of the Public Works Bond issue are also expected shortly..

In the Heart of the Unknown.

Optimism has apparently much to feed on. But the voices of pessimism has yet not been starved out. There are some who draw a parallel between the present phase of business and the improvement that was witnessed last summer. They attribute it, as in the last instance, to the replenishment of stocks which had been allowed to run excessively low ; and they argue, therefore, that there must be a relapse before long. The principal question to decide in connection with the present boomlet is how far it is due to the intelligent anticipation of the effects of the present inflationary programme. That it has had a large place in the upward movement of stocks and commodities, nobody can deny. Equally un-

Air Mail Week.

deniable is the fact that there have also been, to some extent, some real, as distinct from monetary, factors at work. From this it may follow that, if nothing is done, there is bound to be a setback.

The practical question, therefore, is not the degree of responsibility for each of the factors involved but how far we may rely on international conferences and national administrations to keep the gains so far made and utilise them as the basis of further advance. That, clearly, is in the heart of the unknown land. So far as America is concerned, she is prepared to be accommodating both in economic and in political disarmament ; and Americans believe that Mr. Roosevelt must win alike at home and abroad.

FRANCE.

BOOMLET IN THE BOURSE.

The return of M. Herriot is the occasion for the circulation of various rumours regarding the American proposals for the settlement of the French War debts. It is said that the United States Government put forward last week, though unofficially, the proposal that France shall agree to liquidate her silver, by an immediate payment of 1/3 of it partly in gold and partly in silver, by an immediate issue to the American Government of bonds representing another third of the total and by France handing over to the Bank for International Settlements the balance of the bonds to be put into circulation at a later date. The news agencies aver that a confidential and semi-official letter containing this proposal had reached Paris from Washington. This report neither Government concerned has lost time in contradicting. .The official *communique* issued in Paris on Saturday night denied the rumours and declared that "the information is without foundation." In spite of this flat contradiction, the reports have been frequently asserted again and again ; and even details such as the letter having been handed by M. Monnyck Financial attachier to the French embassy in Washington to M. Rischt for transmission to the *qua darsy* have been ventured. As the proposals indicated in these reports give figures which are no better than the present value of the 60 annuities agreed on in the earlier settlement, one wonders what the idea of the American Government might be in making suggestions that are so palpably uncacceptable to France.

M. Herriot's Return from Washington.

In the light of the reports and the contradictions thereof, French opinion is hardening that M. Herriot's sojourn to Washington has been altogether barren of results. The French envoy has maintained the strictest silence on his return to Paris. He has conferred separately both with the President M. Lebrun and M. Deladier, the French Premier. "I feel I have fulfilled my mission to the United States. I went there to inform myself. I return with the maximum of information. I find I agreed with Mr. Roosevelt on every great question as both of us seem to reduce the suffer-

ings of all people. A fact of historic importance is President Roosevelt's project for a renunciation of American neutrality in case of aggression." Such interviews afford little or no clue to the likely developments of the future. And it is widely felt that, as on previous occasions, the French delegates will enter the London conference of June 12th and 14th with no definite plans or ideas but what may be suggested by the proposals of others.

Protests against Foreign Credits.

A somewhat singular viewpoint has emerged lately in regard to the £30 million credit raised by the French Treasury with a banking group in London. There have, of course, been the usual comments that the operation is proof of the spirit of co-operation between two of the foremost international monetry centres. But at the same time, there is a feeling that France should not have given Britain the occasion to suggest that the turn of the wheel has come about and that as against the extension of liberal credit by France to Britain in the autumn of 1931, Britain is now in a position to lend large amounts to France. Apart from sentiments of this kind, it is felt that at a time when in many matters France and Britain might have to urge different view points in the World Economic Conference, the former should have avoided any course of action which would suggest her dependence on the other. Among those who think that the necessary credit should have been raised in a different manner at home, is M. Flandin, the former Finance Minister.

Flight from Currency.

The question is still exercising their minds whether France would be able to support the gold standard single-handed and whether, if other nations are not to return to gold soon, her abandonment of it is not a mere question of time. For the present, there is no doubt as to France's capacity to withstand any attack on the franc. In the ten days following America's defection to the cause of the gold standard, the Bank of France had a net loss of only 190 million francs. And as a writer in the *Financial News* says, the Bank had been giving the most convincingly practical demonstration of the gold standard in action, when it allowed individuals to take away gold bars at one end and was at the same time receiving it by lorries at the other. Of the capacity of the Bank to stand any immediate strain there is, indeed, no doubt. But a recent phenomenon points to the presence of certain misgivings in the popular mind. The Bourse has been extremely active during recent weeks. But while bonds stand still at the level of early April ordinary shares of all reasonably sound concerns have shot up remarkably. And this suggests the contingency that people are trying to provide for the contingency of inflation by investing their moneys now in equities. The Government as well as the more responsible sections of the Press are aware of this danger and every attempt is made to quell the fears of inflation. But the matter does not rest entirely with the Government. No amount of gold will suffice to keep France on the gold standard, if all the rest of the world is to forsake it. Hence the insistence on an early understanding at the London Conference.

Improved Production.

If the boomlet in the Bourse were not due to fear of inflation, it could, together with the improvement in French industry, form a pleasing picture of an incipient revival. The following account is from the letter of the Paris Correspondent of the *Economist*:

Iron and steel production figures for March indicate remarkable improvements under both heads. Pig iron output was 73,000 tons (over 16 per cent.) larger than in the previous month, and 54,000 tons (over 12 per cent.) more than in March, 1932, while output of crude steel was put up 91,000 tons (or 18 per cent.) on the month, and was 122,000 tons (26 per cent.) larger than a year ago. The bulk figures were: Pig Iron, 525,000 tons, against 452,000 tons in the previous month, and 471,000 tons in March, 1932; crude steel, 586,000 tons, against 497,000 tons and 464,000 tons. The number of blast furnaces in activity is returned as 85, against 82 in the previous month and 78 in the corresponding month of last year, 126 being closed down or undergoing construction, against 133 in March, 1932.

"Coal production returns for March show total output during the 27 working days of 4,200,788 tons, against 3,995,457 tons in the previous month (24 days) and 3,887,992 tons in March last year (26 days). Average daily output in March was 155,584 tons (with 252,967 labour units), against 166,477 tons (254,035 units) in the previous month and 149,538 tons (267,140) in the corresponding month last year. The output of metallurgical coke by the colliery plants was 328,568 tons, against 296,021 tons in the previous month and 269,638 tons in March, 1932. Consumption figures for the first quarter of the year indicate a slight progress on the corresponding period, with a bulk figure of 18,450,000 tons for the three months."

IRISH FREE STATE

THE STATE BUDGET.

The second budget of the De Valera Administration was introduced in the Dail on Wednesday, May 10, by Mr. McEntee, the Finance Member. Expenditure on internal funds and supply services is put at £31,529,220. The total revenue for the year is not expected to be more than £26,440,000 at which it represents a decrease of £1,732,000 in tax revenue and £1,818,935 in non-tax revenue. Leaving the receipts from new duties and other sources out of account, there is an apparent deficit of £5 million but the Minister expects to show a final surplus of £16,000. A sum of £2,450,000 is provided for export bounties and subsidies and other expenditure arising from the economic war with Great Britain but upon the security of certain assets which have been created, it is intended to borrow £1,275,000 and to utilise this sum to defray 1/3 of the costs of bounties. New duties are being imposed on import of fruits, articles manufactured from clay, soaps, tin and tinned articles limes, varnish and coffee. An excise duty has been imposed on Irish tobacco grown after January 1, at 6s. 8d. a lb. compared with 9s. 4½d. on foreign tobacco; but a preferential rate of 5s. 6d. a lb. is allowed on sales to manufacturers using only Irish tobacco. A measure to deal with unemployment has been promised before the end of the year. Meanwhile, the Government have decided to devote 100,000 for the drainage of bogs.

The total adjusted revenue for the past year was £26,727,140 and adjusted expenditure £26,941,958 being a credit balance of £214,880. The budget is obviously framed on more orthodox lines than might have been expected from the present position and character of the Irish Cabinet. It is true that in regard to the past year's accounts, the Government's task was to a large extent eased by the diversion of the land annuities in the Exchequer and by the imposition of new duties as a result of the declaration of an economic war with Great Britain. But the effects of these should not be exaggerated; for as against an unexpected credit on account of the land annuities there has been also a provision of £3,616,000 for the Guarantee and Emergency Funds which would normally have been unnecessary. The question as to what would have happened to the Irish budget in the absence of the dispute between England and Ireland

(*Continued on page 961.*)

From Our Readers:

To the Editor,

Indian Finance.

I will be exceedingly obliged if you would please publish this letter, as giving the views of the tea producer, as compared with reports by firms like Messrs. Brooke Bond & Co., and speeches of Presidents of the Indian Tea Association and Darjeeling Tea Planters Association.

We might start by saying that, in 1932, tea from most districts has sold at below cost of production, and, in some instances, at half the cost of production, except where some large producers and agency houses are buyers as well as sellers, in which case they take good care to protect themselves.

Where the small producer is concerned, he has no friends on the Calcutta and London markets, so there are no bids for his teas, and these sell for 4 or 5 pence per lb., even though the cost of shipping and London sale charges alone amount to 2 annas per lb. It might interest the public also to know that for the picking of the green leaf alone, from one pice to three pice per lb. is paid; so in the case of the higher grade, the cost of picking the leaf for one lb. of made tea is 3 annas on the Darjeeling Hills.

True it is that production is in excess of demand, but is this not due to the fact that capitalists and wealthy agency houses are exploiting the position and their less fortunate neighbours, and are forcing out huge new extensions in Assam and Southern India, which are yet to come into bearing. If there is no demand, and a cry of overproduction on all sides, why is all this tea being put out? Is it because the wealthy houses know full well that they can swamp and ruin the less fortunate, by putting out all this tea? What are the Government doing, while all this tea is put out? Why do they give the land for it? Surely, they must know that over-production has reduced their income-tax receipts to a blank sheet.

Do the public know anything about the following facts:

That Government rents and cesses have all been enhanced within recent years.

That labour, wages and rates are higher than they used to be.

That producers are no longer able to get the same quantity or class of work done by labourers.

That all rail and steamer rates are in excess of what they used to be.

That producers have to pay a cess for advertising tea, so that the blenders and middlemen may the more easily sell the teas when they have laid hands on them.

That producers also have to pay heavy export and dock charges.

That the London warehouse charges are out of all proportion to the value of the goods, amounting to 7.20 pies per lb. of tea.

That we have to pay brokers and other selling charges.

That when sold, we are not entitled to our money for 90 days.

That the Government duty in England is 2d. per lb., which, in some cases, amounts to 50 per cent. on the value of the tea, and in the case of Java tea selling at 4d. the duty works out at 100 per cent., which the consumer has to pay.

We are very sorry for Java, but if we are suffering from over-production in India, then why do we allow Java tea into our markets to ruin us. If Java will force out huge areas of tea and have a right of way into our markets, we must shut up shop altogether.

Do the public know that grocers all over England demand and not only demand but receive 5d. per lb. for allowing tea to stand on their counters for sale. The public might well wonder where all these charges come from. Well, where do they come from?

In the past, most of these charges have come from the consumer; but, as the consumer is no longer able to pay, the producer is being forced to do so, or fall out and go into liquidation, while the larger tea houses, who are producers as well as sellers, are putting out huge areas of new tea, with the wealth they have been accumulating, while the slow but sure game of strangulation goes on, to which nobody makes any reference at all.

All these facts are very carefully kept in the background, when the position of the tea industry is voiced in the newspapers and scores of poor tea planters lose their paltry billets, and labourers have to work on three to four annas a day, while the middlemen, blenders and tea houses pocket all the wealth.

Yours etc.,

A LONG-SUFFERING PLANTER.

STATISTICAL INFORMATION

INDIA'S FOREIGN SEA-BORNE TRADE.
April Figures.

The total imports of private merchandise in April, 1933, amounted to Rs. 9,69 lakhs, and total exports, including re-exports, to Rs. 10.42 lakhs. Net exports of private treasure during the month of report were Rs. 4,47 lakhs and total visible balance of trade in merchandse and treasure was Rs. 5,21 lakhs in favour of India. Balance of remittances of funds was minus Rs. 1,11 lakhs.

BURMA'S FOREIGN TRADE.

The following is a report on the principal variations in the Foreign Trade of the Province of Burma during the month of April, 1933, as compared with the corresponding period of 1932:—

The combined value of Imports and Exports was Rs. 225,.09 lakhs as against Rs. 324.50 lakhs, showing a decrease of Rs. 99.41 lakhs.

Imports.

The total value of merchandise decreased from Rs. 91.99 lakhs to Rs. 67.46 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.

Suspence A/c	...	2,370	Outlay	...	19,096
Debts	...	2,46,253	Outstandings	...	7,600
			Cash & Invests.	...	25,714
			Profit & Loss	...	1,13,506
Total	...	24,38,093	Total	...	24,38,093

Extracts from Director's Report:

Report for the year ended 31st December, 1932.

During the year the Company was reconstructed and the undertakings of the New Purupbari Tea Co., Ld., and the Orang Tea Co., Ld., were absorbed in accordance with the circular to Shareholders dated 2nd January, 1932. Extraordinary General Meetings were held during the year, at which the necessary resolutions covering the reconstruction were duly passed, and confirmation of the High Court of Judicature to the reduction of Capital was received on 2nd April, 1932.

Accounts.—The result of the season's working is a loss of Rs. 40,726-15-10 which has been transferred to Profit and Loss Account. After allowing for Depreciation, Debenture Interest, and Reconstruction and Amalgamation expenses, there remains a balance at debit of this account of Rs. 1,13,506-2-1. In the circumstances we regret that it is necessary to pass the payment of a dividend on the Preference shares.

Crop.—The following figures show the final outturns as compared with the estimates.

	1932 Crop. Mds.	Srs.	1932 Estimates. Mds.
Bahipookri and Bettybari ...	10,096	4½	10,500
Orang	3,797	28	3,600
New Purupbari ...	2,124	6	2,700
	16,017	38½	16,800

The crop at Bhaipookri was short of the Estimate on account of a drought in the early months of the year which brought on a severe attack of Red Spider. The outturn from Orang was satisfactory despite a severe hailstorm in April, which however had an adverse effect on quality. The crop results for New Purupbari were disappointing, and steps are being taken to increase the outturn for the coming season.

Sales.—The crops were sold in Calcutta and London and the average prices were as follows:—

	1932. per lb. As. P.
Bahipookri and Bettybari	5 6.55
Orang	4 6.44
New Purupbari	5 2.20
Average for Company ...	5 3.13

The market continued to decline during the year, and it was not until the last few sales that prices improved, by which time most of this Company's teas had been sold

The standard of manufacture generally was maintained, and that at Bahipookri was improved, some very nice teas for which good prices were secured being made towards the close of the year.

Planted Area.—The area under tea is 2,054.10 Acres.

Condition of the Property.—The gardens were kept in good order throughout the year.

Buildings and Machinery.—These are all in good order.

Labour.—2,400 were on the roll on 31st December, 1932.

Estimates for Season 1933.—These allow for a crop of 15,400 maunds at a cost on Revenue account at Garden and Calcutta of Rs. 4,48,603. These Estimates are based on the proposals for Export and Crop Restriction recently adumbrated by the Indian Tea Association being carried into effect.

AJMER ELECTRIC SUPPLY CO., LD.

Total	...	17,65,380	Total	...	17,65,380

Extracts from Directors' Report:

Report for the year ending 28th February, 1933. Without provision for depreciation the operation for the year resulted in a gross profit of Rs. 22,267-1-9 and it has, therefore, been decided to carry this amount to the Depreciation Reserve.

In their last report the Directors advised the sale in January, 1932, of a forward Exchange Contract to establish a Reserve Fund of about Rs. 58,500 to protect the Company against loss in the future in repaying a Dollar loan of $53,956.83, the equivalent in May, 1931, of Rs. 1,50,000. In January, 1933, this Dollar loan was reduced by $15,000.00, the equivalent of Rs. 41,700 at a rate of exchange of Rs. 278 equals $100.00. The actual rate of exchange for remitting this payment was Rs. 388½ equals $100.00 which has resulted in a reduction in the Reserve Fund of Rs. 17,075. This fund now stands at Rs. 41,983-3-6. We are pleased to report a further reduction of $7,500.00 in this loan which has been made since the accounts were audited.

The year under review has been one of depressed trade conditions in Ajmer where a very noticeable reduction in the purchasing powers of the Indian consumers has been reflected in the large number of disconnections of Small Shop Consumers that have been carried out during the year, although the nett result of these disconnections has only been a reduction of 10 connections at the end of the year. The depressed state of trade is again shown in the slow growth of the industrial load in spite of the reductions in rates that went into effect in May, 1932.

In other respects the progress of the Company has been satisfactory, the total number of units generated being 9,79,460 units with an increase of 22 per cent. over the previous year in the number of units sold which were 6,69,665.

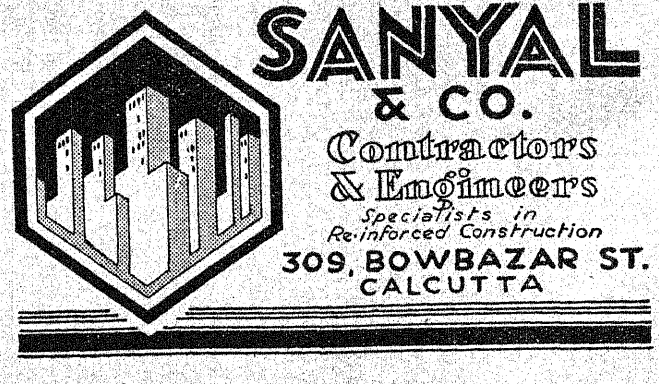
The connected load at the end of the year totalled 1133 K. W., an increase of 175 K. W., over the previous year, the number of consumers connected being 1300, a net increase of 56. Sixty new domestic consumers were connected representing an incresae of 144 K. W. in the connected load.

The Municipality have called for the addition of 100 multiple street lights. Nine of these were installed and put into service before 28th February, 1933. The work of installing the balance of these lights is in progress.

Rigid economies in staff and salaries were reported last year and further economies have gone into effect resulting in a reduction of 26 per cent. in the salaries and wages account, while with an increase of 10 per cent. in the total number of units granted during the year, a reduction of 21.5 per cent. has been effected in generation expenses. If additional load development and the efficient operation of the plant is to be maintained it is not considered that any further important economies in these directions can be expected.

The staff in Ajmer are now fully covered by Fidelity and Workmen's Compensation Act Insurance, in addition to which all the buildings, plant and stocks of the Company are fully covered by insurance.

The Company's buildings, plant, mains and other installations have been maintained in a satisfactory condition throughout the year.



NORWICH UNION FIRE INSURANCE SOCIETY, LD.

The report of the Society for 1932 states that the net fire premiums amounted to £1,966,645 (against £2,005,678 for 1931). Net claims paid and outstanding were £1,067,464 (against £1,056,167), or 54.28 per cent., and after charging outgoings the sum of £14,201 (against £68,733) is carried to profit and loss.

The accident and general net premium income amounted to £1,709,897 (against £1,823,362) and the net claims paid and outstandings were £982,562 (against £1,041,132), or 57.46 per cent. After providing for outgoings, the sum of £78,013 (against £105,651) is transferred to profit and loss.

Net marine premiums amounted to £175,028 (against £194,124). The underwriting account for the year 1931 has been closed and £15,000 (unchanged) has been transferred to profit and loss. The marine fund amounts to £193,459.

The total premium income from all departments was £3,851,570. The Society's investments stand in the balance-sheet at or under market value on December 31 last.

In the profit and loss account the balance brought forward is £412,668 and £107,214 is credited, being the transfers from fire, accident, and general and marine accounts. Interest and dividends (less tax) amounted to £194,495. After debiting dividend to shareholders, debenture interest, directors' remuneration, income-tax, commutation of pensions, and other outgoings, the sum of £414,866 is carried forward.

The dividend for the year is unchanged at £6 a share, payable in equal instalments on May 1 and November 1.

NORTHERN ASSURANCE CO., LD.

Accounts for 1932 shows that net premiums received in the fire department during 1932 amounted to £2,116,446 (again £2,201,421 in 1931). Losses totalled £1,133,608 and commission, management expenses, etc., absorbed £1,045,191. After reserving 50 per cent. of the premium income for unexpired risks, a deficiency of £19,866 is carried to profit and loss. The loss ratio for the year was 53.5 per cent. (against 54.4 per cent.) of the premiums, or, after adjustment of unearned premiums, 51.55 per cent. The expense ratio (including commission to agents and charges of every kind) was 49.38 per cent. (against 47.42 per cent.). Receipts and payments overseas have been taken into account at approximately the current rates of exchange, except in the case of the United States, where the exchange of 54.80 has been maintained.

In the accident department the net premiums were £1,619,601 (against £1,619,665). Claims paid and outstanding were £805,042 (49.71 per cent.) and the commission and expenses of management £676,698 (41.78 per cent.), leaving £137,894 (against £148,050) to be carried to profit and loss, after reserving 50 per cent. of the premium income for unexpired risks.

The net premiums for 1932 in the marine department amounted to £784,575 (against £812,963), the losses to £249,671 (against £201,679), the expenses to £68,848, a surplus of £466,056 being left in the account. The losses and expenses on the accounts of 1931 and previous years amounted to £476,824. An underwriting profit of £25,000 together with interest of £49,746 is transferred to profit and loss, leaving the marine fund on December 31 at £941,477, or 120 per cent. of the premium income.

In the Northern life department 1,912 policies were issued during the year for net new assurances of £1,122,637 (against £1,016,329), yielding annual premiums of £39,362 and single premiums of £15,174. The premiums for the year amounted to £490,932 (against £478,038), and the interest (less tax) to £251,450. Claims absorbed £383,260 (against £496,357), and the management expenses (including commission) took £64,554. The sum of £166,312 was received for annuities granted during the year. The funds of the life department at the end of the year totalled £7,144,190. The directors propose to pay a final dividend of 9s. per share, less tax, on the Ordinary shares marking 17s. per share for the year, the same as for 1931. This dividend will entitle the Preference shares to a distribution of £24,000 (less income-tax) over and above the fixed dividend of 9s. per share which has been paid on account of 1932, and there will accordingly be payable on 1st July next a further dividend of 7s. 1.97d. per Preference share for 1932, in addition to the fixed dividend for the first six months of the current year when it is declared.

BRITISH INDIA STEAM NAVIGATION CO., LD.

The dividend on the Five per cent. Cumulative Preference stock for the half-year ended 31st March will be payable on 19th May and the dividend on the Five-and-a-half per cent. Cumulative Preference stock for the half-year ending 30th June will be payable on 1st July.

CALCUTTA TRAMWAYS CO., LD.

The directors report that notwithstanding the continuance of adverse conditions the traffic and revenue results showed a steady improvement throughout 1932, the tramway receipts having increased by 6.61 per cent., the passengers carried by 7.17 per cent., and the mileage by 5.10 per cent. The improvement, it is added, continues. The revenue for the year, after deducing contributions to provident funds and transferring £55,000 (unchanged) to depreciation fund, amounts to £95,764—an increase of £20,000 compared with 1931. The net profit, after deducting the Debenture service, is £57,470 (against £37,680). A final dividend of 3½ per cent. is proposed on the Ordinary shares, making 6 per cent. for the year (against 3½ per cent.), and the balance forward is increased from £6,179 to £9,149. During the year £42,329 was written off the depreciation fund for renewals, etc.; with the present allocation of £55,000, the depreciation fund now stands at £246,931. The outstanding Seven per cent. Second Registered Debentures will be redeemed on May 15 next. To replace these £250,000 Five per cent. Second Debenture Stock was placed in January last.

In the balance-sheet floating assets total £415,000; this includes £259,505 for investsments, whereas the market value of these at December 31 last was £302,798. Creditors, etc., income-tax reserve, and final dividend, £109,000.

GEORGE SPENCER, MOULTON AND CO., LD.

Net loss for 1932, after writing off £956 (against £12,232) from rubber stocks, £16,862 (against £22,864 for 1931), increasing the debit balance to £24,886. This has been written off by transferring a similar amount from reserve. A consolidated balance-sheet of the company and its subsidiaries shows floating assets of £73,870 against creditors (including specific reserves) for £20,473. The report states that the railway conditions in this country have again severely curtailed the company's railway business, while the continuance of the exchange embargoes and restrictions has also adversely affected the export trading with railways abroad, but some progress has been made in extending other branches of business which are more dependent on the home market.

LITTLE'S ORIENTAL BALM AND PHARMACEUTICALS, LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,98,980	Block (nett)	..	6,03,572
Reserve	...	80,000	Stocks	...	22,082
Debts	...	12.957	Stores & Spares	...	41,050
Profit & Loss	...	33,027	Outstandings	...	18,652
			Cash & Invests.	...	39,608
Total	...	7,24,964	Total	...	7,24,964

Extracts from Directors' Report:

Accounts for the year ended 31st December, 1932, show a net profit of Rs. 20,234-8-7. The continuance of the world-wide depression has again shown its effect on our turnover, but in spite of this we are glad to be able to show a profit on the year's trading although reduced. Your Directors, Managing Agents and the staff accepted a cut in their remuneration, but with the improved outlook generally and the special efforts we are making to meet the changed conditions by the introduction of a new gift packing and a smaller sized packing to meet the reduced buying capacity of the public, we look forward with confidence to the future.

Mr. F. H. Oakley who was on tour in Canada last year returned in July, 1932, *via* the Far East, having established agencies in Canada, Japan and China. It is too early to form any opinion on the results of these but much valuable information has been obtained as to methods of marketing similar products in other countries and as already indicated we have decided to adapt some of these to the special requirements of the Indian market.

The balance standing to the credit of the Profit and Loss account including Rs. 12,792-15-7 brought forward from last year's account is Rs. 33,027-8-2. There is also a balance of Rs. 5,000 at the credit of Dividend Equalisation Reserve, thus making the available balance Rs. 38,027-8-2. While it will be seen that this is sufficient to pay a dividend of 5 per cent. and carry forward Rs. 8,000 odd, in view of present financial conditions, your Directors recommend the distribution of a dividend of 2½ per cent. for the year absorbing Rs. 14,965 and also transferring Rs. 1,000 to the staff Bonus and Provident Fund, Rs. 5,000 to Dividend Equalisation Reserve and Rs. 5,000 to Reserve account, making it Rs. 80,000 and carrying forward the balance Rs. 7,062-8-2.

STEWARTS AND LLOYDS, LD.

The company report a profit for 1932 of £272,022 (against £317,272 for 1931). There is placed to depreciation £152,029 (against £150,000 to depreciation and £75,000 to special reserve for 1931). With £137,119 brought forward, there is a sum of £257,111. After meeting Preference dividends, a balance of £156,738 remains to be carried forward. To facilitate arrangements in connection with the erection of new plant at Corby, the company absorbed during the year as going concerns at book values the undertakings of three subsidiaries controlling ore fields and operating iron works. The Northamptonshire ironstone properties of the company and its subsidiaries have always been included in the books at original cost. As a consequence of the decision to proceed with the erection of new plant, the value of these properties has been, in the opinion of the directors, considerably enhanced. A new valuation has therefore been given effect to in the company's books. This shows a considerable appreciation over the previous figures and the amount of appreciation has been carried to a capital surplus account, the whole of which has been applied to writing down certain fixed assets, including shares in subsidiaries, the value of which may be affected by new development at Corby.

PENINSULAR AND ORIENTAL STEAM NAVIGATION CO., LD.

Interim dividend on the Cumulative Preferred stock for the half-year to 31st March, 1933, at the rate of 5 per cent. per annum, payable on 12th May. The directors regret that they are unable in present circumstances to declare an interim dividend on the Deferred stock (unchanged).

MIDNAPORE ZEMINDARY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	...1,02,76,200	Block (nett) ...	96,48,481
Reserves	... 23,90,000	Stocks of Sugar ...	13,095
Debts	... 18,98,707	Outstandings ...	45,95,889
Profit & Loss	... 60,357	Cash & Invests. ...	3,67,799
Total	...1,46,25,264	Total	.. 1,46,25,264

Extracts from Directors' Report:

Report for the year ended 13th April, 1933, shows that the nett Revenue Profit amounts to Rs. 40,939-7-1.

Economic conditions generally continue to be as acute as they were last year. Crops were damaged by early droughts, winter paddy was a failure, while the price of jungle wood remained inordinately low with an almost negligible demand. In common with all Zemindars the Company has found it extremely difficult to effect collections.

There has been a considerable appreciation in the value of the Company's investments in Government of India Securities; certain of these have been realised and the profit on the written down value has been credited in the Profit and Loss Account; of this Rs. 90,000 has since been transferred to Reserve.

The sum standing at the credit of Profit and Loss Account including Rs. 4,452-0-3 brought forward from the previous year is Rs. 60,357-1-4 and as prospects at present show no signs of improvement, the Managing Agents recommend the payment of the Preference Dividend at 6 per cent. per annum Rs. 52,572, and that the balance of Rs. 7,785-1-4 be carried forward.

RELIANCE FIREBRICK AND POTTERY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	... 6,00,000	Block (nett) ...	3,62,434
Reserves	... 1,60,000	Stocks ...	1,31,520
Debts	... 75,215	Stores ...	37,974
Profit & Loss	... 26,625	Outstandings ...	1,28,768
		Investments ...	1,49,219
		Cash & Deposits ...	51,925
Total	... 8,61,840	Total ...	8,61,840

Extracts from Directors' Report:

Report for the half-year ended 28th February, 1933, shows a nett profit of Rs. 21,970-8-7 for the half-year.

After making sundry adjustments there is a balance at the credit of the Profit and Loss Account of Rs. 26,624-9-2 from which the Directors recommend:—

Dividend of 6 annas per share Rs. 22,500, carry forward Rs. 4,124-9-2, total Rs. 26,624-9-2.

GUEST, KEEN AND NETTLEFOLDS, LD.

The directors announce that after charging Debenture interest amounting to £70,415 and making provision out of profits for redemption of Debenture stock amounting to £32,704 the profits of the year ended March 31, subject to completion of audit, are approximately £130,000. This compares with £201,569 for 1931-32. The directors recommend the payment on June 8 of a final dividend on the First Preference shares at the rate of 5 per cent. per annum for the six months ended March 31, free of tax. They regret that under present conditions they are unable to recommend the declaration of any dividend other than that on the First Preference shares in respect of the past year. The dividend on the Second Preference shares is in arrear as from April 1, 1931.

NATIONAL CO., LD.

Synopsis of Balance Sheet:

Total	... 63,08,050	Total ...	63,08,050

Extracts from Directors' Report:

Accounts of the half-year ended 30th April, 1933, show a nett profit of Rs. 1,78,551-9-7.

After transferring Rs. 15,000 from Dividend Equalization Reserve and making sundry adjustments, there is a balance at credit of Profit and Loss Account of Rs. 2,09,455-6-4. The Directors recommend dividends on Preference shares at Rs. 3-8 per share Rs. 17,500 and on Ordinary shares at 8 annas per share Rs. 1,75,000 the balance Rs. 16,955-6-4 to be carried forward.

A profit of Rs. 98,579-7-2 was realised by the sale of Government Securities and this amount has been utilised to write down the price of jute stocks.

In accordance with the agreement of the Indian Jute Mills Association, the mills have worked 40 hours per week, with 15 per cent. of the total looms silent.

BISRA STONE LIME CO., LD.

Total	... 34,36,822	Total ...	34,36,822

Extracts from Directors' Report:

Accounts for the year ended December 31, 1932. The double shift system introduced during the year 1930 continued throughout the year under report, giving an increased output both in cloth and yarns. Manufacturers had, on account of their improved quality and variety, a ready sale in the market, as a comparison of the value of stocks in hand at the close of the year with those of the preceding year will show, and as the result, their sale-proceeds increased from Rs. 13,38,064 in 1931 to Rs. 28,52,508 in 1932, although prices had to be reduced considerably in conformity with the prevailing market rates. The demand for their production being happily on the increase, the board has taken in hand an extension of the mills by an addition of 260 looms, of which 104 looms arrived during the year, and have been set to work since December last, while an order for the balance of the looms has already been placed. To feed the additional looms with yarns, the board has also placed an order for 7,130 additional spindles with all necessary preparatory machinery, while the construction of the necessary additions to the existing mill buildings for accommodating the additional machinery has also commenced, and is being pushed on. Despite the general depression the Dhakeswari Cotton Mills made a gross profit of Rs. 5,40,245 as the result of the year's working. After providing Rs. 1,05,860 for depreciation, Rs. 9,710 for writing off the share-selling commission, Rs. 1,00,000 as provision for meeting the income-tax, super-tax, and surcharges and Rs. 11,756 being charges under other statutory heads, there remains a balance of Rs. 3,12,917 which is the nett profit of the year. Out of this sum, the Directors propose to set apart for reserve fund Rs. 78,229 being 25 per cent. of the year's nett profits which will leave a balance of Rs. 2,34,688, and this sum, being added to the preceding year's balance Rs. 86,704, makes a total of Rs. 3,21,482 which is available for distribution. The board of directors have recommended that out of the profits available for distribution a dividend of 10 per cent., free of income-tax, be declared for the year, this will absorb Rs. 2,38,227, leaving a sum of Rs. 83,256 to be carried forward to the current year's profit and loss account.

KUNCHUNPORE TEA CO., LD.

Total	...	4,38,742	Total	...	4,38,742

Extracts from Director's Report:

Report for the year ended 31st December, 1932.

The result of the Season's working is a profit of Rs. 8,886-9 which has been transferred to Profit and Loss Account. After sundry adjustments, and the transfer of Rs. 2,000 to the Reserve Fund, there is a balance at credit of the Profit and Loss Account of Rs. 15,471-8-2.

Dividend.—We propose to pay a dividend of 2½ per cent. and to carry forward Rs. 6,471-8-2.

Crop weighed out 3,585 maunds against 3,400 maunds estimated and 3,416 maunds in 1931.

The average selling price was 4 annas 10 pies per lb. compared with 4 annas 9 pies per lb. in the previous year.

Planted area.—The total area under cultivation is 601.28 acres which includes 1.75 acres Seed Barri.

Estimates for 1933 provide for a crop of 3,400 maunds for an outlay of Rs. 80,091 including Inland Freight and Sale Charges.—J. A. Brown, E. H. Sayres, Directors. Duncan Brothers & Co., Ld., Managing Agents. Calcutta, 18th May, 1933.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Crop & Sales.—The following are comparative statistics of outturn and sales for the past three years:—

	Crop.	Sale Average.
1932 ...	429,885 lb.	Re. -/8/ 9 per lb.
1931 ...	437,184 lb.	Re. -/10/ 0½ per lb.
1930 ...	487,142 lb.	Re. -/11/ 10 per lb.

Season's Working.—The working of the Company for the period under review resulted in a loss of Rs. 14,664-8-8, Receipts Rs. 2,35,624-8-1, Expenditure Rs. 2,50,289-0-9, loss Rs. 14,664-8-8.

Profit and Loss Account.—After adjustment and transferring the above, this Account shows a balance at credit of Rs. 3,195-10-8, which is being carried forward.

Estimates, 1933.—Assuming the scheme for regulation of exports and restriction of crop is agreed to the estimates for 1933 provide for a crop of 408,000 lb. tea at a cost of Rs. 1,86,400.

Total	...	9,70,963	Total	...	9,70,963

Extracts from Directors' Report:

Report for the year 1932.

Area.—At 31st December the area under tea was Mature Tea 854 acres, Immature Tea 12 acres, total 866 acres.

The Garden was re-surveyed in 1931.

Weather on the whole was favourable. The rainfall was 100.92 inches compared with 114.70 inches in 1931. The heavy rain in September and early in October again destroyed the Autumnal character of the later teas.

Crop.—A crop of 7,700 maunds was realised which compares with 7,690 maunds in 1931. The garden was kept in a good state of cultivation and the general health of the bushes is well maintained. The standard of plucking was fine throughout but the market continued extremely unsatisfactory and the average price realised was annas 6-1 per lb. which compares with annas 8-10 per lb. in 1931.

Accounts.—The total expenditure for the season amounted to Rs. 3,03,644-14-7 including Sale Charges and the result of the season's working is a loss on Revenue Account of Rs. 69,872-9-8. After appropriating Rs. 45,000 from the General Reserve also Rs. 2,425 unclaimed Dividends and providing for contribution to the Employees' Provident Fund and taking into account Rs. 28,064-14-4 brought forward from 1931, the balance at credit of Profit and Loss Account is Rs. 3,296-14-7 which is carried forward.

Season 1933.—The Estimate for season 1933 will be framed in accordance with the Restriction Scheme as soon as it is complete in detail.

ELLENBARRIE TEA CO., LD.

Total	...	3,31,888	Total	...	3,31,888

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

The Season's working has, resulted in a deficit of Rs. 29,351-9-5, which has been traneferred to Profit and Loss. After sundry adjustments there is a balance at credit of that account of Rs. 1,660-12-3 which we propose to carry forward.

The unsatisfactory result is due to the further heavy drop in market prices.

Crop weighed out at 3,716 maunds as against 2,390 maunds in 1931 and 3,300 maunds estimated.

The average selling price was 4 annas 8 pies per lb. compared with 6 annas 2 pies the previous season.

Planted area. The area under cultivation is 512.3 acres exclusive of 1.8 acres under nursery and 31.4 acres fallow.

Estimates for 1933 provide for a crop of 3,300 maunds for an outlay of Rs. 1,00,813 including Inland Freight and Sale Charges.

Profit & Loss	...	44,253	Outstandings	...	12,291
			Cash	...	1,37,690
Total	...	5,39,699	Total	...	5,39,699

Extracts from Directors' Report:

Report for the year 1932.

Area.—The area of the garden at 31st December, 1932, was 545 acres as follows:—Mature Tea 502 acres. Immature Tea 43 acres, total 545 acres.

An area of 5 acres has been put out since 31st December.

Weather was favourable for growth but the rainfall was again heavy, 118.66 inches having been recorded as compared with 106.73 inches on 1931. The heavy rains in September and early in October while helping growth again destroyed the autumnal character of the later teas.

Crop.—A crop of nearly 5,523 mds. was made, which compared with 5,333 mds. in 1931. The garden was kept clean and in excellent cultivation; the usual standard of fine plucking was maintained. The market continued extremely unfavourable. A portion of the crop was shipped for disposal in London. The average price, estimated, is annas 7-8 per lb. which compares with annas 10-3 per lb. realised for 1931.

Buildings and Machinery were maintained in excellent order.

A new type of Cutting Machine was installed.

Labour.—The garden labour position compares as follows:—1932—800, 1931—665.

The daily average at work including villagers was 707 compared with 602 in 1931.

Accounts.—The total expenditure including Sale Charges amounted to Rs. 2,15,597-3-4 and the result of the season's working is a loss of Rs. 4,723-12-7 on Revenue Account. After taking into account the interest earned on investments and providing for Income-Tax and a contribution of Rs. 1,174-2-11 to the Employees' Provident Fund there remains a balance of Rs. 44,453-5-11 which includes Rs. 46,461-15-5 brought forward from season 1931. From this the Directors recommend payment of a Dividend of five per cent. free of Income Tax on 32,000 Ordinary Shares of Rs. 10 each Rs. 16,000, carry forward Rs. 28,453-5-11, total Rs. 44,453-5-11.

Season 1933.—The Estimate for season 1933 will be framed in accordance with the Restriction Scheme as soon as it is complete in detail.

RAJAHBHAT TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	3,00,000	Block	...	3,25,442

Profit & Loss	...	15,165	Outstandings	...	29,293
			Cash & Invests.	...	1,12,588
Total	...	5,59,304	Total	...	5,59,304

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Accounts.—The season's working shows a loss of Rs. 13,721-14. After allowing for the short fall on the estimated value of the balance of the 1931 crop amounting to Rs. 7,076-9-3, providing for Staff Provident Fund, and transferring Rs. 32,000 from Working Capital, there remains a balance at credit of Profit and Loss Account of Rs. 15,164-13-3, which is to be dealt with as follows:—

Pay a Dividend at the rate of 5 per cent. per annum, absorbing Rs. 15,000, carry forward Rs. 164-13-3, total Rs. 15,164-13-3.

Crop.—The crop weighed out at 8,885 maunds against an estimate of 7,600 maunds and realised an average price of 5 annas per lb. in Calcutta and 6.75d. per lb. in London.

General.—Following a drought at the commencement of the year climate conditions were favourable and the estimated crop was exceeded. Teas of a satisfactory quality were made and the reduced sale prices were entirely due to the depressed state of the market.

Season 1933.—The Estimate provides for a crop of 7,219 maunds, which it is calculated will be allowed under the restriction scheme, at a total expenditure of Rs. 1,98,780, the equivalent of 5.5 annas per lb.—R. A. Towler, B. C. Studd, F. M. Buckland, Directors. Calcutta, 3rd May, 1933.

Extracts from Directors' Report:

Report for the year 1932.

Area.—At 31st December the planted area of the garden was as follows:—Mature Tea 324 acres, Immature Tea 76 acres, total 400 acres.

Weather was on the whole favourable and a rainfall of 111.83 inches was recorded which compares with 88.72 inches in 1931.

Crop.—A crop of nearly 2,248 mds. was made compared with 1,878 mds. in 1931. The market continued extremely unfavourable for growers and the average price realised was annas 7-3 per lb. compared with annas 8-7 per lb. in 1931. A portion of the crop was shipped for disposal in the London Market.

The garden was kept reasonably free of jungle and drainage received further attention during the year.

Buildings were maintained in good repairs.

Machinery ran satisfactorily throughout the year.

A new type of Cutting Machine was installed.

Labour.—The position at 31st December was as follows:—1932—206, 1931—207.

The daily average at work including villagers was 236 compared with 232 in 1931.

Accounts.—The total expenditure including Interest and Sale Charges amounted to Rs. 1,06,684-4-7 and the result on the season's working is a deficit of Rs. 25,526-2-6, which has been added to the balance at debit of the Revenue Account.

Provision has been made for contribution to the Employees' Provident Fund.

Season 1933.—The estimate for season 1933 will be framed in accordance with the Restriction Scheme as soon as it is complete in detail.

TENGPANI TEA CO., LD.

Extracts from Directors' Report:

Report for the year 1932.

Area.—The area of the garden remained at 471 acres.

An area of 8 acres has been put out since 31st December.

Weather was favourable for growth and the rainfall though heavier than 1931 was fairly evenly distributed. A fall of 118.61 inches was recorded compared with 111.27 inches in 1931. The heavy rains in September and October again destroyed the autumnal character of the later teas.

Crop.—A crop of nearly 4,348 maunds was made which compares with 3,501 maunds in 1931. The garden was kept clean and in excellent cultivation. The usual standard of fine plucking was maintained but the market continued extremely unfavourable. The average price realised was annas 7 per lb. which compares with annas 10 per lb. for 1931.

Accounts.—The total expenditure including Sale Charges amounted to Rs. 1,53,296-11-8 and the result on the season's working is a loss of Rs. 1,684-4-3 on Revenue Account. After taking into account the interest earned on Investments, appropriating time-barred Dividends and providing for Manager's Commission, Income Tax and contribution to the Employees' Provident Fund the balance at credit of Profit and Loss Account is Rs. 2,100-8-7 which includes Rs. 2,624-5-10 brought forward from season 1931, which is to be carried forward.

Season 1933.—The estimate for season 1933 will be framed in accordance with the Restriction Scheme as soon as it is complete in detail.

			Cash & Invests.	...	98,161
			Profit & Loss	...	363
Total	...	4,09,414	Total	...	4,09,414

Extracts from Director's Report:

Report for the year ended 31st December, 1932.

Crop & Sales.—The following are comparative statistics of outturn and sales for the past three years:—

Year.	Crop.	Sale Average.
1932 ...	285,900 lbs.	Re. -/9/8¼ per lb.
1931 ...	248,867 lbs.	Re. -/13/6 per lb.
1930 ...	330,920 lbs.	Re. -/12/2 per lb.

Season's Working.—It will be observed the working of the Company for the period under review resulted in a profit of Rs. 128-3-5. Receipts: Rs. 1,78,550-5-7, Expenditure: Rs. 1,78,407-14-2, Surplus Rs. 142-7-5, less—Commission to Manager and Managing Agents Rs. 14-4, Profit Rs. 128-3-5.

Profit and Loss Account.—After adjustment and transferring the above profit this Account shows a balance at debit of Rs. 363-6-2, which is being carried forward.

Estimates, 1933.—On the assumption that the schemes for restriction of crop are agreed to, the estimates for 1933, provide for a crop of 3,44,000 at a cost of Rs. 1,66,500.—K. B. Miller, E. L. Watts, E. Studd, Directors. Calcutta, 15th May, 1933.

ALLIANCE ASSURANCE CO., LD.

During 1932 the Company issued 5,258 new life policies, assuring £3,835,886. The premiums in respect of this new business amounted to £331,658, of which £209,110 was in respect of single premiums. The amount reassured with other offices was 483,129, at premiums amounting to £80,128, including single premiums of £73,589. The number of annuity bonds issued during the year was 301, securing £25,020 per annum, the consideration received being £219,092 (against £73,631 in 1931). The total premium income of the combined life accounts, after deduction of premiums paid away for reassurances, amounted to £1,500,992 (against £1,425,342). The life and annuity funds at the close of the year amounted to £23,451,441—an increase of £704,941 during the year.

The quinquennial valuation of the Provident life fund was made as at 31st December, 1932. The amount available for distribution was found to be £264,638, of which £253,707 belongs to the policyholders and the remainder (£10,931) to the members. One-fifth of this amount has been brought into the profit and loss account for the year.

The premiums received in the sinking fund and capital redemption account amounted to £188,468 (against £440,395), and the interest, less tax, to £64,504. After provision for claims, surrenders, commission, and expenses, the fund at the close of the year stood at £1,822,749.

In the fire account the net premium income amounted to £2,056,888, being £21,982 in excess of that of the previous year. Interest, less tax, was £117,200. The outgoings including claims commission, and expenses of management, absorbed £1,695,283, and £460,012 has been transferred to profit and loss account.

The marine premium income, after deduction of returns and reinsurances for this and previous years, was £421,939 (against £480,006), and claims paid during the year totalled £314,416 (against £319,808). The 1930 underwriting account has now been closed. Of the resulting balance of £106,783, £40,000 has been set aside for future claims and forms part of the reserve for previous years. The surplus of £66,783 and interest, less tax, £38,439, have been carried to profit and losss account. The marine fund at the close of the year stood at £1,124,264.

The combined premium income in the accident and miscellaneous insurance accounts was £1,161,985 (against £1,193,002). The sum of £157,236, which includes interest £56,843, less tax, has been carried to profit and loss account. The total accident funds at the end of the year were £1,178,658.

The additions to the profit and loss account amount in all to £871,176 (against £861,144). Out of this sum provision has been made for income-tax and for writing down the book values of the company's premises; £9,700 has been allocated to the widows' and orphans' fund and £100,000 has been placed to reserve. The balance of the account at the end of the year was £1,240,019, of which £475,125 will be absorbed by the dividend for the year. The directors recommend a final dividend of 10s. per share, payable on 5th July, making 18s. per share for 1932 (unchanged).

KORNAFULI ASSN., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,00,000	Block	...	1,98,097
Reserve	...	35,000	Crop A/c.	...	31,488
Debts	...	13,961	Outlay	...	1,013
Profit & Loss	...	185	Outstandings	...	5,131
			Cash	...	13,417
Total	...	2,49,146	Total	...	2,49,146

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Outturn—For the season was 5,042 mds. 42 lb. as compared with our estimated crop of 4,000 mds. and 3,531 mds. 23 lb. manufactured in 1931.

Climatic conditions throughout the year were on the whole favourable for growth.

Of the crop 635 mds. 20 lb. were shipped for sale on the London market and the remainder was sold in Calcutta. The average realised for the whole crop is equivalent to 4.226 annas per lb. as compared with 4.997 annas realised in 1931.

The result of the season's working is a loss of Rs. 2,961-14-10 which, with the adjustment of the 1931 Accounts and the appropriation of Rs. 75,000 from the General Reserve Fund, brings the amount at credit of Profit and Loss Account to Rs. 184-8-2, which is to be carried forward.

The General Reserve Fund now stands at only Rs. 35,000, but we intend to build this up again at the earliest opportunity.

Estimates for the current season provide for a crop of 4,500 mds. at an expenditure of Rs. 1,02,836 excluding Commission to Manager and Interest charges.

This Company, has however, agreed to participate in the proposed Restriction Scheme, and the above estimate is therefore subject to modification in the event of restriction in crop being agreed to by the Industry.

NORTH BRITISH AND MERCANTILE INSURANCE CO., LD.

The account for 1932 show the following results:—Net premiums—fire, £3,277,472 (against £3,628,332 for 1931); Railway Passengers Assurance Company, £1,108,185 (against £1,155,341); Ocean Marine Insurance Company, £252,481 (against £290,208); Fine Art and General Insurance Company, £326,959 (aganst £339,524). Profits exclusive of interest, are as follows:—Fire, £214,358 Railway Passengers, £153,829; Fine Art and General, £33,109. The whole balance of the 1931 account of the Ocean Marine has been carried to the reserve for claims of 1931 and previous years, and £50,000 (unchanged) has been transferred from that reserve to profit and loss. Combined interest revenue of these accounts, £545,283 (against £549,524).

New life policies were issued insuring, net, £3,993,376 (against £3,816,878), and £1,517,800 (against £343,789) was received for the purchase of annuities.

The profit and loss accounts, after providing for the dividends paid during the year and for income-tax, etc., show the following balances carried forward:—North British, £3,126,839 (against £3,172,843); Railway Passengers, £1,706,132 (against £1,576,254); Ocean Marine, £542,151 (against £481,467); Fne Art and General, £654,991 (against £612,695).

The directors recommend a dividend for the year 1932 of 23s. per share, less tax, payable half on 15th May and half on 11th November, being the same as for the previous year.

ALLIANCE TEA CO. OF CEYLON, LD.

Net profit for 1932, £2,827 (against £15,705 for 1931), which is added to the balance forward, making it £10,254. No dividend is declared (against 7½ per cent.). Tea crop, 1,276,094 lb. (against 1,290,205 lb.); costs, 8.70d. (against 8.91d.) a lb.; net sale price, 10.90d. (against 13.87d.). Rubber crop, 368,100 lb. (against 338,100 lb.); proceeds averaged 1.89d. (against 2.38d.) a lb. Floating assets, £52,000; creditors, £6,600.

IMPERIAL CEYLON TEA ESTATES, LD.

Net loss for 1932, £4,945 (against net profit of £6,941 for 1931), reducing credit balance to go forward to £3,511. No dividend is declared (against 3 per cent.). Tea crop, 1,124,956 lb. (against 1,038,523 lb.); costs, 8.11d. (against 9.0d.) per lb.; net sale price, 7.89d. (against 11.55d.). Rubber crop, 151,758 lb. (against 129,478 lb.); net sale price, 1.81d. (against 2.40d.) per lb. Floating assets, £34,000; creditors, £5,787.

WORLD OF INDIAN FINANCE

Thursday, June 1.

There has been no change in the money market. Credits have continued to be plentiful. It is the borrower that is being wooed and coaxed. ½ per cent. for interbank call money was the nominal rate quoted all through the week. On Friday, however, funds were slightly usable—only slightly—on account of the payments for Treasury Bills allotted on the auction day. The discussion, raised in these columns, as regards the possibility of the introduction of six months and/or nine months Bills has excited considerable interest; and bankers are now looking forward to such a change in Treasury Bills operations as the only way whereby current stagnation in banking circles would be relieved. The plethoric supply of money was responsible for the three months Treasury Bills rate being pushed down to an average of Rs. 1-3 as against Rs. 1-3-11 last week. However, the total applications were, though better than in the earlier weeks, nothing like the colossal figures that used to be the case till six weeks ago. On the one hand, it is clear that there is absolute redundancy of funds. On the other hand, no striking evidence of this is forthcoming in the volume of tenders for Treasury Bills. What can be the explanation for this somewhat anomalous state of affairs? In the old days, with the average discount rate of three months Bills going down week after week, bankers used to apply not for the exact amounts they needed but for much more than their requirements at varying rates. Thus, if the market anticipated that allotment could be on the basis of Rs. 99-11; and if a banker wanted to buy Treasuries for Rs. 20 lakhs, he would apply for Rs. 10 lakhs at Rs. 99-10-3, another Rs. 10 lakhs at Rs. 99-10-6, a third Rs. 10 lakhs at Rs. 99-10-9, a fourth Rs. 10 lakhs at Rs. 99-11-0 and a fifth Rs. 10 lakhs at Rs. 99-11-3. Applications would, therefore, be for twice or thrice the requirements. It was in this way that the total tenders came to be swollen to figures exceeding Rs. 4 crores and Rs. 5 crores. In the present conditions, however, bankers know that there is not much variation in the average rate of accepted tenders. They know that applications at Rs. 99-11-3 or ¼ anna higher or lower according to the temper of the market in that particular week would ensure allotment. They, therefore, apply more or less for just the needed quota.

We put forward this explanation as affording a clue to the understanding of the money market position in relation to its capacity to take up Treasury Bills. If applications last Tuesday were only Rs. 1.45 crores, it may be taken that this amount represents, in full, the investment power of banks and like institutions so far as Treasury Bills are concerned. This point is of great importance as we believe that while a change over to Bills of longer maturity would appear to be a certainty, it is no less certain that the Treasury would need to come to the market for a larger sum than the present basis of Rs. 1 crore per week. Whether the increased short-term accommodation would be asked for by a mere expansion of the amount on offer on the tender day from Rs. 1 crore to Rs. 2 crores or whether the weekly offer would be kept at Rs. 1 crore but would be supplemented by intermediates to be sold at tap rate, is a point on which the Government should spend some serious thought. We believe that it would be far better, at least in the first two or three weeks of the change, if tenders are to be limited to the present amount of Rs. 1 crore and if intermediates are made available on the remaining days. In making this suggestion, we are guided by the feeling that exchange banks will be induced to take considerable interest, in six months and nine months Treasury Bills—especially six months Bills. At a time when business has shrunk tremendously, when money in London is available on very cheap terms, and when loss on account of the disparity between ready T.T. and forward T.T. is on the small side, there is every justification to hope that London funds would be used, for substantial amounts, in Rupee Treasury Bills. If this assumption of ours proves correct, it may well mean that once the bankers know what exactly are the ideas and intentions of the Treasury as regards the rate which it is prepared to pay for six months or nine months accommodation—and they will come to know this from the acceptances in the first week or two—they might be inclined to operate so heavily on the intermediates as to escape disappointment by a later suspension of intermediates or the reduction in the volume of Treasury Bills. In other words, we anticipate that in the first or second week of the availability of longer term Bills, the Government might be able to sell intermediate Treasury Bills for such substantial sums that they may have to withdraw interme-

diates altogether and continue to rely on the weekly quota of Rs. 1 crore on the auction day. As against this procedure, it may be urged on the side of the Government, that to have unduly heavy Maturities in the space of a week or two might seriously embarrass the ways and means adjustments at the time of maturity. So long as ways and means advances from the Imperial Bank will be readily available to the Government, there is no need to exaggerate the embarrssment caused by heavy Treasury Bills Maturities. We also hope that by December-February, the surplus of current revenue over expenditure would have rectified the cash position of the Goyernment to such an extent that the meeting of the Treasury Bills Maturities in that part of the year for even large sums should present no insuperable difficulty. From the point of view of the giltedge market, it would be far better if, instead of keeping on sales of Treasuries for Rs. 2 crores for week after week, all the needed funds are raised in a short space of time and, after this is done, the market is tapped only for the usual Rs. 1 crore.

We have reasons to believe that in the shaping of Treasury Bills operations, the Government are most anxious to do nothing which would cause further disturbance in the giltedge situation. We suppose that the authorities have not yet abandoned the hope of being able to give the finishing touch to their conversion programme by launching the last instalment system in August. By that month, considerable sums would have flowed into the market from the loans to be redeemed. The sums thus released would, in great part, find their way back to giltedge securities. Looking ahead to developments in the latter half of July and the earlier half of August, there is some justification for the expectation that giltedge prices must show substantial improvement on their present levels. Once there is genuine investment buying, prices are bound to respond. And if over a period of six weeks or so, prices remain on the upward grade, much of the nervousness that now prevails would disappear. With a market responding, in a natural fashion, to the inherently strong factors in the giltedge situation, other investors, who are now fighting shy of giltedge, might also be tempted to become bolder. If, therefore, on some such reasoning as this, the plan of a conversion loan early in the Autumn is still adhered to, it is quite intelligible that, in the interval, the Finance Member would not like to do anything that would retard recovery. As the market is hyper-sensitive at the moment, utmost tact and most correct judgment is required in the planning and execution of Treasury Bills operations. From this point of view, we are convinced that six months Bills would prove most admirable. It would be the best way of drawing funds from London. And, in due course, the very competition amongst bankers would bring down rates which the Treasury has to pay. The utilisation of London funds for this class of investment would mean that no disturbance is caused in the local money market. The assured reduction in the yield on six months Bills as a result of keen demand on the part of bankers will have a satisfactory effect on giltedge. If, by the middle of June, six months Bills are introduced, it may be expected that this process of gradual lowering in the yield and the resultant effect on giltedge would begin to make itself felt as from the middle of July. This is also the period when the factors connected with the release of funds from maturing loans would play an important part in bulling the market. The timetable of the Treasury Bills programme on the lines indicated here would, therefore, appear to be most suitable alike to the ways and means position of the Treasury and the technical position of the giltedge market.

For the present, the Government do not seem to know what best they could do to enable the market to recover from the disastrous effects of their own mistakes. They tried to prop up securities by occasional and half-hearted purchases. As was to be expected, these have had no effect whatsoever. The authorities are, evidently, perplexed and worried. Our Simla Correspondent says that Indian Finance's frank exposure of the folly of recent actions has lost for it a good friend or two amongst Olympian Gods. They are in a most pathetic state of helplessness and empty chagrin. Neither the Treasury nor the Imperial Bank has woke up from the benumbing effects of the May calamity. While they should be spurred to more vigorous action, they are amongst themselves hoping that the other of the two should take the needed action. The Bank authorities might argue that it is the Government's job to push up the securities in view of the final phase of the conversion programme. The Treasury authorities might retort that it is the Bank's business to coax giltedge to higher levels before their accounts are made up on June 30. In this banter between friends, giltedge in India has become a neglected, lifeless market which operators are forsaking, in increasing numbers, in favour of the more active markets in jute, hessian, jute shares, cotton and mill shares. The vogue of giltedge amongst dealers and operators is rapidly disappearing. Any action to be effective should be carried out while some of the more important dealers remain still interested in giltedge.

London is swaying the destiny of rupee giltedge. And London advices are, on three days out of four, weak and disheartening. Till the Indian market begins to assert, by virtue of the intrinsic factors affecting local conditions, its independance of London, it is of great importance to understand the salient influences that will play an important part, in the near future, in the price fluctuations of British Funds and other trustee sterling scrips. The position in this behalf is admirably summed up in the following extract from the Financial News:

> "For the earlier months of the depression investors believed that the lower interest rates on giltedge were more than offset by the lower risks as compared with other securities. That was the first stage. The second stage came when investors began to find positive attraction in the speculative probability in the rise of giltedge prices, and the third stage was one of equilibrium where the risks and attractions as between giltedge and other investments approximately balanced, and no great change occurred in the relative level of either—a condition which has existed more or less since last autumn. There are signs now, however, that we are passing into a fourth stage. There is undoubtedly a feeling in business circles that industrial prospects are better than they have been for some time, and the feeling seems to be supported to some extent by the dry evidence of statistics. The natural result should be for a slight readjustment to be made in risk estimates, not enough to produce selling of giltedge (of which there has been little sign) but enough to withdraw some of that support from giltedge which before held the Consols market in equilibrium with others."

On the materialisation of some kind of risk reassessment, the onward march of giltedge prices must surely be arrested. But, as the Financial News is careful to add, this does not mean that there is any reason to believe that a crack in the giltedge market has started. Neither bullish nor bearish, in brief, should be the influence of London on giltedge in India.

Exchange was quiet, with a rather steady undertone. The future holds promise of a firmer rate if and when six months Treasury Bills are introduced. On the weekly sterling tender day, applications for £1,535,000 at 1s. 6 1/16d. were received and alloted approximately 65 per cent.

(Continued on page 1021)

OTHER INDIAN MONEY MARKETS

Bombay:—Money was steadier during two or three days of the week, being quoted 2½ per cent., while it is easier at the close. Interbank call money is 1½ per cent.

Exchange has been steady with banks selling T.T. at 1s. 6 1/32d. upto November, 1s. 6d. upto January, 1934.

Karachi:—Exchange has remained moderately steady due to trade demand for money and movement in exports. The gap between ready and forward positions is getting narrower. There are sellers of T.T. at 1s. 6 1/16d. near; 1s. 6 3/64d. mid-July 1s. 6 1/32d. October; 1s. 6 1/64d. December-January, buyers, June T.T. is a shade better than 1s. 6 5/64d.

Three months bills are quoted 1s. 6 9/64d. June; 1s. 6 1/8d. thereafter upto December.

Money has been in fairly good demand, the market being prepared to pay three per cent. for call.

FINANCE ABROAD.

Embargo on foreign loans to be lifted?

A question of importance which developed in London following the Boots deal is whether the embargo on foreign loans would soon be lifted. It was believed that the recent deal in regard to the reclamation of British control over Boots is on quite a different footing from what was proposed in March last. On the former occasion, it was a public issue which came well within the scope of the Chancellor's embargo. But now it is a purely private transaction and people would not see how the Government could interfere. Moreover, it was thought that the Treasury also is impressed with the exceptionally favourable terms of the bargain which the Tobacco Securities Trust have driven with the American interests. And this forms a singular contrast to the onerous terms which Mr. Liggett was able to gain by his peculiar method of setting up 5 different purchasers and playing them off one against another. The recent trade treaty concluded with the Argentine shows that the British Government have come to regard the embargo on foreign issues as an important bargaining point. Since many of the countries with whom Britain has to negotiate for favourable terms of mutual trade have to rely on the London market for the supply of capital, the British government might naturally think that it would be most unwise to part with that power just at this stage in the evolution of Britain's new model trade policy.

Boots Deal and the Embargo.

All such speculation as to the policy and intention of the Government has been set at rest by the following press notice issued by the Secretary to the Treasury on May 18:—

"In a notice issued on January last, the Chancellor of the Exchequer in withdrawing his earlier and more comprehensive request in regard to new issues of capital asked intending borrowers to refrain for the present from coming on the market *inter alia* for foreign issues. Mr. Chamberlain did not attempt, at that time, to define precisely the scope of the term 'issue' which was used by him and he now finds it necessary to make a further explanation on one aspect of the matter. For the present he thinks it is not in the public interest that large blocks of securities, including securities dealt in on the London Stock Exchange, should be purchased from foreign holders with a view to their sale in this country, either by an issue to the public or otherwise. With this further explanation, he believes that in the majority of instances a judgment will easily be formed whether any particular case should be held to fall within the spirit of his request or not, but he hopes that in future, wherever any doubt arises, enquiry will be made at the Treasury before a transaction is set in hand."

It is evident that the reference to purchase of securities from foreign holders with a view to their sale in this country either by issue to the public or otherwise is aimed at such transactions as that by which the Boots shares were repatriated. It is interesting to know why with the present interpretation of the original intentions, the Treasury made no attempts to stay the progress of the Boots deal or to scotch it in the last stages. The *Financial News* asks "on what grounds in our present huge and steadily growing gold supplies the Treasury considers the acquisition of further large amounts of gold more desirable than the repurchase of valuable British businesses at attractive prices."

In continuation of our remarks in these columns regarding the attempts of the United States to stabilise silver, the London correspondent of the *Statesman* gives the following programme which was announced by Senator Pitman on May 20th:

(1) The price of silver should be reasonably raised and substantially stabilized around that point (no specific figure was mentioned by Mr. Pittman although 60 cents an ounce, or 2s. 6d. at par, had been discussed unofficially";

(2) The status of silver is a part of the general problem of the stabilization of currencies;

(3) Governments should agree to abandon the policy and practice of debasing and melting up of silver;

(4) The restoration of the fineness of debased coins should be brought about as rapidly as practicable;

(5) As far as possible there should be a large use of silver as a base for currency issues;

(6) Tariffs and other obstructions to the free movement of silver should be lowered or eliminated.

CALCUTTA SHARE MARKET.

Jute.—This section opened steady on Monday and continued so throughout the day. Howrahs opened at Rs. 53-4 and Kamarhattys at Rs. 515, but before the close of the day, Howrahs improved to Rs. 53-10 and Kamarhattys to Rs. 518. There was strong demand for the finished goods from consuming centres and specially for 11 porter hessians which improved to Rs. 15-2 for Ready delivery. As the session progressed a steadier feeling developed and Howrahs touched Rs. 55-2 which was the highest during the week. Kamarhattys also moved up to Rs. 524, while there was a strong demand for Kanknarrahs up to Rs. 492, on rumours of good dividend. Among Bird group mills, Aucklands were placed at Rs. 207, Dalhousies were steady at Rs. 400, ex-dividend, Lawrence, Naihattis, Kinnisons and Landsdownes were steady at last week's levels. Alliances which had receded to Rs. 328, the week before, improved to Rs. 336. In Kettlewell group Fortgloster and Fortwilliam were in strong demand up to Rs. 550 and Rs. 292 respectively. Anglo-Indias were popular at Rs. 375, while Ballys and Barnagores improved to Rs. 175 and Rs. 159. Among Yule mills, Cheviots were dealt up to Rs. 253, Orients up to Rs. 241, New Centrals up to Rs. 445, while Deltas and Belvederes were in demand at Rs. 420, and Rs. 415 respectively. Caledonians had buyers at Rs. 545, with no sellers. Gourepores were in strong demand and were placed at Rs. 384 at a rise of 10 points over previous weeks' levels. Kelvins were placed at Rs. 565, while Empires were dealt at Rs. 42-4 and Presidencies Rs. 6-8. Jute shares are again regaining their popularity as a medium of investment which they had lost during the last two or three years and investors are again reminded to pick up good time at every reaction.

Cotton.—Better enquiry was noticeable in this section on account of improved prices of raw cotton and strong advices from New York. On reports of setting up of weaving looms in Dunbar and Bowreah mills, Dunbars improved to Rs. 115, while Bengal Nagpores were freely dealt at Rs. 22, Kesorams, however, remained unchanged at Rs. 3-11.

Coal.—Some buying enquiry was noticeable on investment account. Standards were placed at Rs. 23-8, Talchers at Re. 1-6 and Unions at Rs. 9-4. Bengal coals were easier at Rs. 210, while East Indias came to business at Rs. 12-12, Mintos at Rs. 3, New Beerbhum at Rs. 8, and North Damuda at Rs. 3-4. Churulias were in good demand at Re. 1-7, while there was unsatisfied enquiry for New Manbhum roundabout Rs. 15.

Miscellaneous.—Burma Corporation remained steady roundabout Rs. 8-8. Among Electric and Telephone concerns, Bareilly came to business at Rs. 10-12, Benares at Rs. 11-8, while Bengal Telephones were in demand at Rs. 15-4. Burn & Co., (Ordy.) were on offer at Rs. 145 without many buyers on rumours of no dividend; while Indian Iron remained dull at Rs. 5-4. Among paper concerns, Bengal paper were in good demand at Rs. 68, while Titaghur (Ordy.) were wanted at Rs. 14-12 on announcement of -/9/- dividend. Midnapore Zemindary improved to Rs. 70 due to improvement of prices of raw jute. B. I. C. (Ordy.) were easy at -/13/-, while Deferred were in good demand at -/8/-, sellers demanding -/10/-, while Preference were in request at Rs. 105-8. Howrah Oil were wanted at Rs. 9-12, while British Ceylon Corporation were placed at Rs. 6-12. Among Shipping concerns, Calcutta Landing & Shipping were wanted at Rs. 5 without many sellers. Among Sugar shares, Samastipurs had sellers at Rs. 18-6, New Savans Rs. 18, and Ryams at Rs. 50 Balorampur sugar were, however, steady at Rs. 12-8, Carew & Co., were wanted at Rs. 17, while sellers were asking -/4/- higher on rumours of good dividend. Murree Brewery were in good demand at Rs. 161 without any shares offering.

Banks & Railways.—Imperial Bank contributories and fully-paids were easier at Rs. 288 and Rs. 1,216, while Central Banks were in demand from Bombay roundabout Rs. 21-8, without many shares on offer. Among Railways, Hoshiarpur-Doab came to business at Rs. 83.

Government Securities.—3½ per cent. Paper opened steady at Rs. 81-3/4 and improved to Rs. 81-12 on Monday, while 4 per cent. 1960-70 loan was dealt at Rs. 94 and 3½ per cent. 1947-50 was quiet at Rs. 92-4. As the week advanced 3½ per cent. paper declined to Rs. 80-4, while 1960-70 was dull roundabout Rs. 93-12 and the New Loan was quiet at Rs. 91-14. Business in securities has contracted a good deal, while speculative element is entirely missing owing to meagre fluctuations in prices. The Bank rate remained unchanged at 3½ per cent.

Tea.—Tea shares were in strong demand and prices improved all round. Dauracheras improved to Rs. 9, Central Cachars to Rs. 75, Hantaparas were marked up to Rs. 316, Moheemas came to business at Rs. 12-8, Bhatkhawas were dealt at Rs. 35-8, Hattikhiras at Rs. 15, while Hassimaras were in dood demand at Rs. 31-8, Bishnauths were marked up to Rs. 20-8, Ledos to Rs. 150, while there was strong demand for Eastern Cachars at Rs. 8-4. From next week when Tea auctions begin, good tea shares are likely to record higher levels.

BOMBAY STOCK EXCHANGE.

From our Correspondent.

(By Wire.)

Bombay, June 1.

The outlook of the share market has been hopeful and prices have been well maintained. There has been good support at lower levels on account of the continued steadiness in cotton prices and better feeling with prospects of early trade recovery. It appears, however, there is still scope for higher prices.

The industrial section is materially unchanged.

Hydro Electric shares are a little easier on account of absence of fresh buying.

Iron and steel keeps quite steady.

The cements section remains unchanged.

In the bank section, there has been again a drop in the Imperial Bank fully paids and partly paids, whilst other bank shares are almost unchanged.

The week in government securities witnessed again a good deal of fluctuations. The market at present appears to be dependent upon advices from London for India sterling stocks and prices vary according to the tone of the market in London. The lowest done during the week for 3½ per cent. Rupee Paper was Rs. 79-8; and at the close, the market appears to be a little steadier at Rs. 81, on better sterling advices.

WHEAT.

(By Wire.)

(From Our Correspondent).

Karachi, June 1.

The wheat market is weak, showing no disposition to buy except on part by local and Bombay mills for ready requirements. Operators consider further fall likely. Quotations are: Ready Rs. 24-14; July Rs. 24-4-6; September Rs. 25-6.

COTTON.

(By Wire.)

(From Our Correspondent).

Karachi, June 1.

Bullish feeling in cotton still continues owing to good export demand and higher foreign advices. The market is inclined to take profit at this level and reaction is consequently possible. Sind Desi is quoted Rs. 18-4 July and Sind American Rs. 22-10 July.

IN TIMES OF DEPRESSION

A Life Assurance Policy should never be sacrificed. Valuable as it is at all times, its value is enormously enhanced in times of trade depression, with consequent falling incomes and depreciating securities.

Your future is SAFE—with the

JUTE AND JUTE GOODS.

JUTE.

Calcutta, 1st June, 1933.

The market during the week under review, has ruled steady but irregular with wide fluctuations, ranging between Rs. 34-8 to Rs. 36 for Ready Firsts. Mills have shown moderate interest at all setbacks, and a considerable quantity of loose jute was bought by them during the week. Crop reports are satisfactory and there have been rather large arrivals of loose jute from the mofussil which has checked further advance in prices. News from America, however, continues to be satisfactory, and it is hoped that after the successful termination of the World Economic Conference, there may be a further improvement in prices. The Futures Market has been very steady with prices ruling between Rs. 39 to Rs. 41-8. The closing tone of the market was slightly quieter.

Quotations of the East India Jute Association Ltd. for October Futures are:

HESSIAN.

Calcutta, 1st June, 1933.

The market during the week under review ruled steady with prices for 9 Porters fluctuating between Rs. 11-5 to Rs. 11-15. There has been good business reported by the Mills and a steady demand from the consuming centres. At the higher level, however, secondhand holders came out as profit takers, with the result that to-day there was a drop of nearly half a rupee in the price of 9 Porters. The market closed quiet but steady.

SATISFACTORY GROWTH OF PLANTS.

Messrs. Sinclair Murray & Co., in their jute crop report for the week ended May 27, say:—

General.—Weather has been favourable during the week and plants have made satisfactory progress. Rivers are rising steadily.

Narayanganj.—Weather during the week has been favourable. Condition of plants satisfactory and they range in height from 1 ft. 9 ins. up to 6 ft. Weeding operations have been completed. River is at the same height as last year.

Chandpur.—Weather during the week has been favourable and plants have made good progress. Condition of plants satisfactory and they range in height up to 5 ft. 10 ins. Weeding operations are going on as required. River is about 1½ ft. lower than at this date last year.

Chaumuhani.—Weather during the week has been favourable and plants have made good progress. Plants range in height from 1 ft. 6 ins. up to 5 ft. 6 ins.

Akhaura.—Weather very favourable. Condition of plants satisfactory and they range in height from 1 ft. up to 3 ft. 8 ins. Weeding operations going on as required. River is rising steadily and is at the same height as last year at this time.

Niklidampara.—Weather has been favourable and plants have made good progress. Condition of plants satisfactory and they range in height from 1 ft. up to 3 ft. 9 ins. Weeding going on as required. River is rising and is now 1 ft. 9 ins. below last year's level at this time.

Sarishabari.—Weather during the week has been favourable and plants are growing well. Plants range in height from 1 ft. 4 ins. up to 4 ft. 8 ins. River is rising and is about 2 ft. higher than at this time last year.

Mymensingh.—Weather during the week has been favourable and plants are growing well. Plants range in height from 1 ft. 3 ins. up to 4 ft. 6 ins. River is rising fast and has risen 4 ft. during the week.

Serajgunge.—Weather has been favourable. Condition of plants satisfactory and they range in height up to 4 ft. 10 ins. River is rising fast and is now 1 ft. 9 ins., higher than last year at this time.

Bhangoora.—Weather has been favourable. Condition of plants satisfactory and they range in height from 6 ins. up to 4 ft. Weeding is going on regularly as required. River is rising fast and is now about at the same level as at this time last year.

Madaripore.—Weather has been favourable. Condition of plants satisfactory and they range in height from seedlings up to 4 ft. 8 ins. Weeding going on as required. River is rising and is now about 6 ins. lower than at this date last year.

As a basis of comparison we take last season's crop as 16 annas.

COTTON AND COTTON GOODS

COTTON.

Bombay, June 1.

Since reporting last week the Cotton market has ruled very firm with a further advance in prices in New York as well as the local markets. The highest of the week, Rs. 223, was touched yesterday, and the lowest was Rs. 205.

Early in the week the market, though steady, was not showing any signs of immediate rise. The crop reports and weather conditions in U.S.A. being quite favourable, there was a heavy southern selling, followed by Profit-taking. The bear sentiment was influenced by the international political outlook not being of a reassuring nature, as disarmament, debts, and currency stabilisation problems are unsolved. At that moment it seemed as if the market would move within moderate limits for the time being but would eventually take a definite upward trend. Towards the close of the week, the feeling became more and more bullish, and the news received from Washington that Government was considering the lease of 25 per cent. of the present acreage out of production gave a great stimulus to the market and prices began to soar high, despite favourable crop reports and satisfactory conditions.

Bombay Cotton crop.

The administration report of the Agricultural Department of the Bombay Province for 1931-32 states that the great slump in prices which set in about May, 1930, reacted on the areas sown with many crops in the Presidency.

The cotton crops diminished by over 20 per cent. during the period immediately succeeding the slump. About half the lost ground was recovered later when the cotton area rose to over four million acres in the British district of the Presidency.

Indian cotton that was so far below the American parity is now gaining ground and the same is being narrowed down. The speculations here are not slow to follow the

Ranks foremost in writing machines because of Lightness in touch—Quickness and ease of action—A type impression which is sharp and distinct—An Alignment of type which long and hard use will not alter.

It is quiet, because of a new carriage return, a new shift key mechanism and a generally subdued key action. It is fast, because incorporated in it are exclusive features that, for years, have made Underwood typewriters the speed typing machines of the world.

Fuller particulars promptly furnished on request or better still, ask for a demonstration.

Agents :

BLACKWOOD BLACKWOOD & CO.

4, LYONS RANGE, CALCUTTA

improved conditions here and abroad. The export demand from Europe and Japan is better, and the enquiry for Broach cotton has been much better. The mill situation is showing a somewhat better outlook, the demand for piecegoods being better and some of the mills that had closed down are now reopening, workers accepting reduced salaries without any serious trouble. The position of the market is thus quite satisfactory. The technical position is strengthened by long liquidation and profit-taking sales at every rise. The hedges have been fully absorbed and short sellers are not willing to do so. The Indian crop having all moved from the field to the ports, no new hedges are forthcoming. On the contrary with each export sale a similar amount of hedge sale is withdrawn, thus making the market all the stronger. The tendency of the market is for a still further rise.

Indian Cotton.

The annual report of the British cotton growing Association at the Twenty-eighth Annual Meeting of the Shareholders on May 26, reviews the position of India's cotton industry.

The report records the quantity of cotton marketed by the Association and shows a satisfactory increase in the figures for recent years. The number of bales and the value of the cotton dealt with by the Association during 1932 were 1,49,055 to the value of £1,976,243. The accounts show a loss on the year's working of £20,105 after adequate provision had been made for depreciation. The loss is largely due to depreciation in the value of cotton against which advances have been made.

Dealing with work in India the report records that the Indian Legislature's imposition of an import tax of half penny per pound on raw cotton has doubtless done some good to the Indian grower, and has also stimulated the interest of the Indian spinner in indigenous staple cotton. The tax and other causes resulted in a keen internal demand for Punjab "Americans." Up-country mills bought a lot of the Company's cotton for their finer counts as being cheaper than buying American in Bombay after paying import tax and rail freight up country.

The failure of the export demand owing to the lack of interest of Japan and dearness of Indian cotton led to the Company doing virtually no business with Karachi. Endeavours are now being made to get a good connexion with inland spinning centres, for example, Cawnpore and Delhi. A certain amount of success is reported in the case of the former. With the object of tackling the problems raised by the impurity of Indian cottons, the Indian Central Cotton Committee decided in 1929 to start a number of seed distribution schemes to ensure wider distribution of improved varieties. The report says that these measures are beginning to bear fruit and it is hoped in a few years the purity of Indian cotton will be well established.

PIECEGOODS.

During the week under review the market has ruled steadier and values have been firmer. The dealers and buyers are displaying a more confident attitude and fresh business has been reported done.

The week's turnover includes sales of Indian mill-made dhooties, grey shirtings, khadi chuddars, white shirtings, grey drills, fancy striped shirtings and coatings. In Lancashire styles, fine whites, white yarn dhooties and specialities have received a good deal of attention but, owing to manufacturers having adjusted prices in sympathy with firmer cotton values, only a small proportion of the inquiries have actually been booked. In the Japanese section, forward business has been conducted on a very limited scale, buyers not feeling disposed to pay the higher rates. Owing to the improvement in ready values, Japanese importers have effected moderate sales of "spot" goods, such as grey shirtings and grey dhooties. Continental productions for cold weather styles have again come in for a fair share of attention, several useful orders having been fixed up in various popular styles for August-September shipment.

Bombay.

During the week under review the market in Bombay has ruled very irregular. The news that England and Japan are negotiating on a trade treaty had a very disturbing effect, the people in the trade wishing to await the results. On the contrary the steadier conditions in the cotton market and a fair amount of enquiry, had an healthy effect on Piecegoods. Not much business, however, resulted either in Japanese or British or Indian piecegoods. Prices in the Manchester market are firmer and consequently the small business that was being negotiated for July and August has not resulted. In the Swadeshi section goods have changed hands but the amount that has reached the hands of the consumer is very small. However, due to the improvement in the values of raw commodities it is anticipated that the demand from consumer centres will follow.

Madras.

The general tone of the market has remained steady but otherwise the market has ruled quite lifeless. There has not been much fresh business, as the ruling local rates are below the import parity.

The yarn market is passing through a very difficult time. Stocks are heavy and the values far below the purchase price of the dealers. Dealers are not willing to part at low prices; the demand is poor, the prices that are paid therefore, are not remunerative.

Colombo.

The Decline that was reported last week, still continues at the same rate. Fresh Japanese arrivals are flooding the market and the condition of the textile trade is the worst that has been witnessed in the history of the trade. Demand for spot goods is very poor. Consequently no fresh business for forward positions is taking place at the moment.

With regard to Japanese it may be pointed out that for the four months ended April, 1932, no less than 7,487 packages were imported into the island, and for the same period this year no less than 7,653 have been imported. For the four months ended April, 1932, the total imports from all countries were 11,766 packages, as compared with 10,618, or ten per cent. less for the corresponding period this year. The drop is caused mainly in white goods, the figures being 2,684 and 1,626 packages respectively.

With regard to printed goods it may be noted that the Japanese printing is improving with each shipment. A few months ago the colours were not fast, and when washed, it was found that the colours dissolved. Recent shipments, however, show a distinct improvement in the matter of printing. As the Japanese price is considerably below that of the County Palatine it would look as if Japan was going to oust Lancashire in the printed goods trade exactly as she has done in whites.

BULLION

GOLD.

During the week under review, the gold market has ruled quiet but steady with a firm undertone. Local rates are slightly above the export parity. Consequently, the business in export of gold was not very large. The local market has ruled roundabout Rs. 30-3 and Rs. 30-5 per tola, sovereigns standing about Rs. 19-10. During the previous week, shipment per S.S. *Ranchi* amounted to Rs. 14.38 lakhs. The daily offtake in Bombay continues at about 3,000 tolas, stocks remaining more or less unchanged at Rs. 3½ lakh tolas.

The highest and lowest price of gold per fine ounce during the week were—

May 31	...	...	...	123s. 10d.
May 25	...	...	...	122s. 2d.

The highest and lowest prices of Mint gold ready were as follows:—

1933-VALUATION
BOMBAY
AND
JUBILEE YEAR

SILVER.

Like gold, the silver market has ruled quiet but steady during the whole week. Early in the week, due to Continental sales in London, the market was easy, but later on, America came out as a buyer and values were again higher. The local market fluctuated between Rs. 57-4 and Rs. 58-8. Ready is eight to twelve annas below forward due to heavy stocks which is about 10,000 bars in Bombay and Calcutta taken together. The daily offtake is, however, not inconsiderable, being about 50 bars daily. On the whole, the position of the market is good, the reports in connection with the rehabilitation of silver being the dominating factor in the market. The general belief has been that sooner or later, silver will see higher levels. Therefore, even with huge stocks and unfavourable news at times, the market is not adversely affected to any great extent, bulls being too optimistic in their ideas.

TEA AND COFFEE

TEA.

There was no sale of Tea in Calcutta this week.

London.—During week ending May 13, the market for Tea shares has been quiet for the greater part but there was an upward trend on Wednesday on the news that the People's Council in the Netherlands East Indies had passed the necessary Ordinances in regard to the restriction scheme.

The figures relating to tea movements for London only show that in the four months ending with April imports amounted to 135,781,000 lbs. as compared with 139,935,000 in the corresponding months of 1932. Indian imports were practically unchanged at 64,537,000 lbs., while receipts from Ceylon amounted to 44,858,000 lbs. as against 43,101,000 lbs. In the case of Java and Sumatra there was a decline from 30,727,000 lbs. last year to 24,557,000 lbs. The London stock at the end of April is stated to have been 262,381,000 lbs. as against 171,169,000 lbs. at the corresponding date last year.

Increased Consumption of Indian Tea.

Increased demand for Indian Tea abroad is to be noted. Competent authorities contend that the Chancellor of the Exchequer's estimate of the consumption of tea in the United Kingdom, namely, 10.55 lbs. per head of the population, was too liberal and that 9½ lbs. would have been nearer the mark. Their argument is that the Chancellor erroneously assumed that tea was actually consumed as soon as the duty was paid, and that the duty-paid stock in blending and packing warehouses and in the hands of the retail trade must be about 57 million lbs. These figures, however, are not generally accepted as accurate, and it is pointed out that distributors do not hold heavy stocks and that they would not go on buying actively at the sales if they were so well provided with tea.

The outcome of the campaign to promote the consumption of tea in the United States during the past five years is dealt with exhaustively in the *Tea and Coffee Trade Journal*. The paper declares that the two outstanding results of the campaign have been the winning of 175 brands of tea for the Map of India emblem and an increase in the imports of Indian tea of over 4 million lbs. Incidentally, it adds, in the eight months ending February, 1933, the imports of Indian tea passed those of Ceylon for the first time in tea history.

A comparative table of teas imported into the United States for the nine months ending March in the past six years shows that the receipts of all teas in 19,8 amounted to 76,31,000 lbs. and in 1933 to 74,270,000 lbs. But while black teas increased from 42,322,000 lbs. to 48,039,000 lbs. green teas and Oolong declined from 33,305,000 lbs. to 25,797,000 lbs.

Rise in Imports from India.

Imports of Indian tea were 13,520,000 lbs. in the 1928 period and 17,173,000 lbs. in 1933 and of Ceylon 20,219,000 lbs. in 1928 and 16,611,000 lbs. in 1933. As regards Java and Sumatra, the receipts were 6,750,000 lbs. in the 1928 period and 11,939,000 lbs. in the nine months to March, 1933. There was a big jump in these Dutch teas in the 1932-33 period, imports amounting to 11,939,000 lbs., as stated, as compared with 7,274,000 lbs. in the corresponding nine months of the preceding year.

The parper adds that for the first time in the history of tea propaganda in America an honest effort has been made to induct the tea packer and the retailer into the mystery of the business. The former practice was to create a demand by the consumer and to force the trade to meet it. The Indian Tea Bureau had not only shown the packer how to improve his old blends but how to invent new ones. Lessons in tea blending had gone hand in hand with easily understandable expositions among packers and retailers of all that the Bureau was doing in other directions to make it easier for them to sell their teas.

At the London auctions on May 29, 13,800 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a strong competition. Tippy Orange Pekoe teas were slightly irregular but other sorts were firmer and often a farthing per lb., higher.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	5⅛d.	5⅜d.
,, Broken Peokoe ...	5¼d.	5½d.
,, Orange Pekoe ...	5½d.	6d.
,, Broken Orange Pekoe ...	5¾d.	6d.
,, B. P. Souchong ...	5¾d.	6d.

The following are the value prices:—

Clean Common Pekoe ...	6d.	6d.
,, ,, Broken Pekoe ...	5⅞d.	6d.
,, ,, Orange Peokoe ...	6⅛d.	6⅛d.
,, ,, B. O. Pekoe ...	6¼d.	6 d.
,, ,, B. P. Souchong ...	6d.	6d.

The following were the average prices of Tea in the London market during the week:—

	Last week per lb.	This week per lb.
Indian Tea (Northern) ...	9.17d.	9.59d.
Indian Tea (Southern) ...	10.32d.	10.51d.
Ceylon Tea	11.09d.	11.20d.
Java Tea	7.09d.	6.88d.
Sumatra Tea	6.52d.	6.49d.

Tea Quantities for Sale this Week:—Indian 53,200 packages, of which 51,000 are on Garden Account; Ceylon 7,200 packages, of which 26,500 are on Garden Account.

At the London auctions on May 30, 27,200 packages of Ceylon tea were submitted for sale.

There was a good competition. Better medium qualities were occasionally higher.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day's auction per lb.
Common Pekoe	8d.	7¾d.
,, Broken Pekoe ...	8⅛d.	8¼d.
,, Orange Pekoe ...	8d.	8d.
,, Broken Orange Pekoe ...	8⅛d.	8⅛d.
,, Broken Pekoe Souchong ...		8⅛d.

COFFEE.

Mangalore, May 29.

There is continued demand for native coffee from the Continent. Estate pounded crop is being sold at Rs. 226 per candy. The dealers are looking forward to a somewhat higher price, about Rs. 230, for this quality, before the Port closses for the monsoon, which is not very distant. No plantation coffee has been sold in the market.

SUGAR

Steadier conditions have ruled in the sugar market during the week under review and values have been slightly higher over the previous week. With the scarcity of Indian sugar sales, interest is once again reviving in Java sugar and although the volume of fresh business has been very small the amount of enquiry is quite large. A little more favourable guilder exchange will lead to a good business in Java sugar.

Statistically, the position in India is quite sound, the Indian season being almost over and leaving no carry over in the hands of mills for sales. The bazar stocks either of Indian or of Java sugar are not very large. In view of the growing confidence of people and general optimistic outlook in the world trade conditions, sugar values are likely to see higher prices.

The quotations are:

White Java Ready	Rs. 10 5 3
White Java Afloat	,, 10 7 0
Cawnpore Ready	,, 10 3 0

Bombay:—Due to a decline in Java shipments and other positions by about a penny, the Bombay market has ruled weak. This unexpected decline had a very unfavourable effect on the market. But for this fact, the position on the whole is quite satisfactory.

Cawnpore:—There was a good enquiry during the week for June and July deliveries. No interest, however, is shown in further long positions.

Foreign:—In New York markets, there has been a further small rise during the week under review, whereas the London market has shown a small decline. Java in London is unchanged except shipments afloat have effected a small decline in values. It is believed that London wants to clear off these stocks immediately.

GRAINS AND SEEDS

WHEAT.

The market during the week under review has ruled steady without much change in prices. Demand continues fair to moderate and the trend of the market is upward. September Beta is quoted at Rs. 4.

The quotations are:—

RICE.

After ruling fairly steady, the market was slightly easy during the middle of the week rising again towards the close.

Forward quotations outside the rice market for Big Mills Specials were Rs. 162-8 (June); Rs. 185 (July); Rs. 170 (August) and Rs. 175 (September).

Quotations in the rice market were: Big Mills Specials Rs. 162-8 to Rs. 165; Small Mills Rs. 177-8 to Rs. 180; Special Quality Rs. 187-8 to Rs. 190 and Meedone Rs. 185 to Rs. 187-8.

Boiled rice prices were: Long Rs. 210 to Rs. 220; Milchar Rs. 185 to Rs. 195; Yathalay Rs. 205 to Rs. 220; Broken Rs. 90 to Rs. 105 and Meal Rs. 22 to Rs. 22-8.

Paddy was Rs. 63 to Rs. 64 (river) and Rs. 60 to Rs. 61 (rail).

FLOUR.

During the week the market has been steady.

The quotations are:

	Rs. A.	Rs. A.
Patent Flour	5 14	to 6 0
Superfine Flour	5 10	to 5 12
Household Flour	5 4	to 5 6
Soojee	5 10	to 5 12
Atta B.	5 6	to 5 8
Atta 2	4 14	to 5 0
Atta S.	4 12	to 4 14
Atta K.	4 4	to 4 6
Atta 3	3 6	to 3 8
Pollard	2 13	to 2 14
Bran	2 12	to 2 13

SHELLAC.

After ruling steady during the earlier part of the week, the market towards the close has shown a slight decline in prices.

Shipments up to May, 29, were 31,999 chests.

The quotations are:

T. N.	Rs.	21 8 0
S. T. I.	,,	22 0 0
I. T. N.	,,	20 0 0
12 per cent.	,,	21 0 0

Seedlac	,,	16 8 0
Kirilac	,,	3 0 0
Sticklac	,,	13 0 0
July Futures	,,	23 14 0

The daily rates of T.N. Shellac for the week ending the Thursday the 1st June, 1933 are as follows:—

	May Dely. per md. Rs.	A.		July Dely. per md. Rs.	A.	
Friday the 26th May 1933	23	0	No work	24	8	
Saturday the 27th May 1933	22	8	Value.	23	14	firm.
Monday the 29th May 1933	22	8	Value.	24	4	,,
Tuesday the 30th May 1933	22	8	Value.	24	4	seller.
Wednesday the 31st May 1933	22	0	Completed.	23	12	,,

Transactions for May delivery are being completed and 5,560 mds. of T.N. Shellac is being actually delivered amongst the members and the dealers of the Exchange.

Thursday the last June, 1933, Rs. 23-12 per md. July Dely.

Rate for weekly margin payment announced on Saturday the 27th May 1933 Rs. 24 for July Dely.

From the report of Messrs. Alfred Isaacs & Sons of May 8, it is to be noted that during Mail week the market in London advanced considerably over the previous week, owing to heavy speculative buying and dollar inflation in America. Prices on May 8 were about 10/- a cwt. above the lowest point of a month ago. T.N. Orange for August has been sold up to 55/-, and for October delivery 56/-. On May 1, spot T.N. was 53/- but is now higher at 55 a cwt. Fine orange garnet and buttonlac have joined proportionately in the rise in value, and although there are bound to be many fluctuations, the tendency of the market appears to be for higher values. Deliveries from the wharves total 2,994 packages during April, while landings have been 2,930 packages showing a decrease in stock of 64 packages. The stock in London on May 1 of all grades was 36,238 packages.

SALT.

The quotations are:

HIDES AND SKINS.

The hides and skin market continues to be firm. There is shortage of supplies in the Calcutta market. If the supplies from the moffusil centres are delayed the market prices will go up still higher. Ordinary Bengal wet salted cowhides are being quoted at Rs. 40 to Rs. 42 per score. Dry salted cowhides are also very firm. Madras tanners are willing to pay higher prices today for Calcutta hides, on account of the rise in the price of tanned cowhides in Madras consequent on the receipt of the advice of higher prices obtained in the London market. The local Chinese and other tanners are, however, not at all active; and due to seasonal dullness in the shoe trade at this time of the year,—the sales of leather of all kinds in the Indian market being poor, they are reluctant to pay the higher prices demanded by the hide dealers. The stocks of leather in the country are still heavy and there is no immediate likelihood of the price of leather going up in conformity with the rise in hide prices all at once.

Advices from Agra indicate that the price of the best quality Framed cowhides have shot up to about Rs. 9 per 20 lbs., specially on account of purchases on behalf of an important firm of shippers; which our reporter understands are the firm of Messrs. Ralli Bros. Agra Buffs are being quoted at 6 lbs. per rupee in green weight, while better qualities are being sold even up to 5 lbs. (wet) per rupee; while supplies are not plentiful.

Cawnpore hide and skin market is also very firm and prices have advanced in all classes of hides, Madras tanners being the principal buyers in that market also. The Cawnpore tanners are buyers of the better qualities of hides, both cow and buffs; the lower qualities being entirely exported either to Madras and Bangalore, or to Calcutta, for shipment to Italy and Germany. Hence the rise in the prices of the lower qualities of hides is proportionately higher when compared to higher grades. More or less similar conditions prevail in the Calcutta market also.

The latest quotations for hides and skins in the Calcutta market may be quoted as follows:

Cow Hides.

Agras framed arsenicated	Rs. 5 8 to Rs. 5 12	per 20 lbs.
Dry salted cowhides ...	,, 4 0 to ,, 4 12	,, 20 ,,
Durbhangas ...	,, 4 4 to ,, 4 12	,, 20 ,,
Purneas	,, 4 0 to ,, 4 8	,, 20 ,,

Goat Skins.

METAL MARKET.

Messrs. Balmer Lawrie and Co., Ltd., in their Metal market report for the week ending, May 24, say:—

Galvanized Corrugated Sheets.—The position is *unchanged*. If there was any considerable demand prices would have risen substantially higher as stocks are very short in Calcutta. The demand is, however still far below normal. There has been some inquiry during the week for forward shipment of British Sheets, but little or no business has been booked and rates are unchanged.

Sectional Material.—The market is extremely short of stocks of Angles. Tees and Bars and rates are very firm for all untested material. There has been a good demand for Angles during the week.

The demand for tested to B. S. S. material still remains very poor. Both Home and Continental prices are unchanged.

Cement.—The demand improved during the last week and business is brisk.

COTTON.
(By Wire).

Bombay, June 1.

The Forward Cotton Market in Bombay gradually developed strongly bullish tone during the past week. America's official abandonment of the Gold Standard, which will facilitate payment of War Debts in Currency instead of in gold and rumours about its enforcing drastic reductions in cotton acreage stimulated heavy speculative buying, which resulted in big advance in Cotton prices there. A bullish wave was also witnessed in the local market carrying the rate for Broach July-August up from Rs. 206-12 on Thursday last to 223-12 on Wednesday, May 31. Later some reactionary tendency has developed and yesterday Broach July rate closed at 217. The net gain over the week is a rise of 10-4 in Broach July-August delivery.

As regards the Spot market, it is to be noted that fairly good demand has sprung up for some selected varieties, particularly, Dholleras and Broach. Purchase of Indian cotton is being considered at present a better proposition in view of its very wide parity with American cotton.

BULLION.
(By Wire).

Bombay, June 1.

Silver prices throughout the past week moved within very narrow range. The local rate for Silver June settlement merely hovered between 57-12 and 57-15. Yesterday it was quoted at the latter rate. The news that the United States Government will not countenance remonetization of Silver at 16 to 1 with gold, had adverse effect on Silver prices.

Gold prices have shown some improvement owing to a small decline in London-Paris exchange. Gold on last Thursday was quoted at Rs. 30-5 and advanced to 30-8-6. Yesterday it again declined to Rs. 30-5-6 due to improvement in sterling-Franc rate.

(Continued from page 1031).

Secondly, it must be made sure that it should not be possible, in the case of an institution of such fundamental importance in our national economy, for any sectional, communal, political, financial or regional caucus to get hold of the control. Sir Samuel Hoare says that it should be free from political influences. I am not so much afraid of these. I go further and say that it should be free from every influence which is not purely national.

* * *

This warning is very real. What is the position of the Imperial Bank to-day? It is only Bombay City and Calcutta City that control the institution that has branches in about a dozen provinces.

* * *

Take the case of the Bengal circle which covers the Punjab, United Provinces, Behar and Orissa, Bengal, Assam and Burma. All the Directors of the Bengal Circle are drawn only from Calcutta City. The result is that the Calcutta interests are able to get their requirements fixed up more comfortably than the upcountry interests, because there is nobody to speak for the latter on the Board. The same is the case with Bombay. As for the Madras circle, it does not count at all. In other words, Bombay and Calcutta City interests have been able to assume control of an all-India institution.

* * *

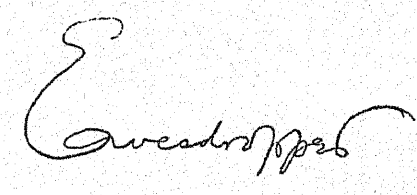
How can this be prevented? Precautions must be taken. Firstly the capital of the Bank—on the assumption that a State Bank is not agreed to—must be divided on a regional basis, so that each province has allotted to it a certain quota; and that quota will be available only for that locality. Shareholders on that register would elect Directors. Thus, the distribution of the capital will be over the entire country, region by region; and directors will also be selected, region by region. The representatives of both business and agriculture should be on its Board.

* * *

Secondly, voting power must be so fixed that one fat purse should not be able to swamp the rest. It would not be one share one vote, nor one man one vote. It will be a compromise between the two, somewhat as follows: One share means one vote; ten shares mean two votes; one hundred shares mean three votes; one thousand shares mean four votes; some such graduation. It will have to be drawn up with skill and understanding of the main purposes of ensuring that the institution is truly national and should be above and beyond any vested interest.

* * *

Then again, the present system, in which superannuated Directors stick to their jobs until removed by an act of God, should be put an end to. No director should be able to be on the Board for more than, say, a total period of ten years. As soon as a member of any regional board rises, in the scale of seniority, to the Chairmanship, he should not stand as Director as soon as the term of Chairmanship is over.



(Continued from page 1002)

The closing rates are: 1s. 6 1/32d. for June-September T. T.; with business done at 1s. 3/64d. for June; 1s. 6d. for October-November T. T.; 1s. 5 31/32d. for December-January T.T.

Bills were quoted at the flat rate of 1s. 6⅛d. right up to December.

Money was in abundant supply at ½ per cent. for inter-bank short credits. Union rates were ¾ per cent. for call, three day's and seven day's money; 1 per cent. 1¼ per cent., and 1½ per cent. for one month, two month and three month deposits.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

IN CONTRITION.

The *Leader* (Allahabad) finds an apt theme for piquant sarcasm in our "pain" and "humiliation" over the disastrous outcome of our "foolhardy" prophecy of the Rupee Loan prospects. Our kind contemporary is moved to pity by our half-innocent, half-foolish faith in the assurances of Government's spokesmen; and, in sorrow more than in anger, it admonishes us "not to do it again". Chastised by one who is so much our elder, we, in the fashion expected of erring kinds, do hereby take hold of our ears with both our hands and aver that we shall never, never do it again. Reverting to us on yet a second occasion, the *Leader* quotes our comments that "next time we have to boost a new loan, caution will be our motto", and asks: why "have to"? The query is not by way of asking for information; it is to emphasise the sarcastic point which our contemporary seeks to make out. We, therefore, owe it to ourselves to deal with the *Leader*'s pungent remarks in some detail. The Allahabad organ is vastly amused to see an inexperienced scribe like ourselves venturing a prophecy on the strength of the mere supposition that the Government might be relied on to pursue a wholesome and scientific credit policy. Even at the risk of being considered irreverent to age and wisdom, we would point out that reliance, on our part, on so trivial a detail as credit policy is nothing to the faith which the *Leader* and the moderate politicians which it represents have continued to place in Government's professions and promises for nearly two decades. The professions have remained professions; the promises have never been fulfilled; these are the admissions which the *Leader* and its friends do themselves make. Yet, their pathetic faith in exacting payment for promise remains undimmed.

* * *

What time the Congress fashioned the plan of non-co-operation with the Councils, Mr. C. Y. Chintamani was a full believer in the assurance of Mr. Montagu and Lord Chelmsford; he not only entered the Council but blossomed into an Hon. Minister. Disillusion came to him soon enough. It did not take him long to realise that Councils of the Montford pattern were worthless; and ministerships were even more worthless save for the five thousand rupees or so which the worthy incumbents received. His faith in the Reforms was dead; but his faith in the further promises to be made remained unshaken. The next agency to announce the next instalment of promises was the Simon Commission. Mr. Chintamani and his friends fumed and raged. Then there was a rain of sweet words and tantalising promises. This takes us to the Round Table Conferences. Our friends were hysterical in their enthusiasm. The machinery for devising promises was being made most elaborate. First R. T. C.; second R. T. C.; third R. T. C.; consultative committee; and finally some odd invention of a committee to deal with the Joint Parliamentary Committee. Meantime, the mountain in labour was delivered of the mouse of the White Paper. As the sorriest specimen of niggardly performance, the White Paper is hard to beat. But this document is stern even in the matter of promises. Mr. Chintamani and those of his way of thinking could find little in the White Paper to sustain their faith even in promises. In market circles, everyone knows that it is anticipation of an event that causes rise or fall, the event itself leaves the market cold. In our own daily experience, we know that by holding out glamorous promises, you can get work done by others; actual payment hardly evokes a like degree of zest. Thus were the *Leader* and its following kept on good behaviour by repeated and renewed and varied promises. Even the chapter of promises would appear to have come to an abrupt end, thanks to the "Hoare" touch in the White Paper.

* * *

The *Leader's* faith in professions has been sustained through all these phases of promises, more promises, still more promises, hardly any performances, and, now, even the promises drying up. For our credulity in the assurances of the Finance Member, we do deserve blame; we were the first to hold ourselves up to ridicule for the incredible folly of misplaced credulity. But we do urge that with its record in this behalf being what it is, the *Leader* should be more careful in using a double-edged weapon like sarcasm. If we erred, we owned our error; and where was the need to rub it into us? Anyway, it is not for the *Leader* to rub it into us. If we have to "boost" the New Loan, our contemporary had to "boost" Mr. Montagu and Lord Irwin. And we shall now explain why we "have to". We shall also show that while the *Leader's* flattery of its heroes was less for their deeds than for their motives, our fervent support of the New Loans is not an adulation to any high personage but approbation of operations of great significance to national economy. If *Indian Finance*, apart from its special field of finance, trade and industry, were inclined to dabble in politics also, it might well be that in the strengthening of Government finances, it sees the biggest "bearish" factor from the point of view of nationalist politics. If Lord Irwin was, on his part, keen on concluding a truce with Gandhiji in March, 1931, one of the most powerful factors in producing such a psychology was the precarious condition of Government finances at that time. If Lord Willingdon is now stand-offish, it is mostly because there is no occasion or need for anxiety in regard to any of the monetary or exchange commitments of the Treasury. As a financial journal, we are pleased at the change that has taken place. As holding nationalistic views, we do appreciate that this very change, welcome from one point of view, is responsible for stiffening the backs of the authorities.

* * *

But our duty is clear. We have to study problems of this nature purely and simply as a financial journal. If Dr. Ansari were called in to attend on Mr. Shaukat Ali or Dr. B. C. Roy to attend on Mr. J. M. Sen Gupta, is it conceivable that the eminent doctors will, on the plea of political differences, put forth less than their best to bring round the patients entrusted to their care? The physicians as physicians forget their politics. *Indian Finance* as devoted to finance, trade and industry is interested in healthy and wholesome finance be it of the Government in power or of the nation kept out of power. In our study of Government's monetary policy and operations, we have never conceived it to be our duty to do all that is possible to disrupt their finances. On the other hand, we do own that the suggestions, we have put forward from time to time, are calculated to place Government finances on an increasingly strong and healthy basis.

* * *

In doing this, we might have been blind to the immediate, political consideration of the reaction of the Treasury's satisfactory financial position on the attitude of the authorities to pending constitutional questions. But, taking a long view, the improvement in Government's position has been of great value and significance to national economy. We "boosted" giltedge securities not so much because we wished to

be of help to the Government, but because we wished to create conditions in which higher-interest-bearing loans could be converted into loans on a lower interest, thus reducing the interest charges in the annual budget. Over the past eighteen months, we have propagandised for firmer and firmer giltedge; we have been "egging" the authorities on to bigger and bolder schemes of conversion. Result? A market, which was hesitant, drooping and had no heart or confidence left at 1931-end, became buoyant, lively and animated by 1932-end. A Government, whose borrowing policy was marked by timidity, self-diffidence and half-heartedness, became bold, dashing and spectacular in their style of operations. Investors—banks, insurance companies, private individuals of small means etc., etc.,—were vastly pleased that their assets came to record rapid appreciation. A Finance Member, who was driven to borrow at 6½ per cent. in September, 1931 and could get but little even at that high rate, found himself able to get all his requirements at 3¾ per cent. The Central Government's budget would, in the next year or two, be greatly benefitted by the reduced interest charges. Industrial concerns could issue fixed-interest-bearing bonds or preference shares on terms most favourable to themselves. The money market has been rid of most of the unhealthy features. No manipulations are now necessary. Easy monetary conditions are assured. Industry would get its working capital on far cheaper terms. As the yield on giltedge becomes lower and lower, there would be an overflow of funds to equity shares. And industrialists are now faced with as favourable a position in this behalf as they ever knew for over a decade. Banks would find that the nightmare of heavy allocations for giltedge depreciation is more or less a thing of the past. Insurance companies might face the Actuarial valuations with a stout heart. We did boost giltedge. We did so because a hundred different interests benefit from a strong and healthy giltedge market. Incidentally, the Government, too, have benefited. But our chief aim has been to serve and strengthen the hundred other interests. Whatever one's differences may be with the Government—its system or its *personnel*—everyone who understands aught of the fundamentals of finance would recognise that healthy giltedge is as essential to the nation at large as to the Treasury.

* * *

While we deem it our duty to emphasise favourable developments in the giltedge situation on all those occasions when such developments occur, our attitude to New Loans is more or less clear cut. We have *always* to support New Loans. If a New Loan is planned in accordance with sound and scientific cannons of credit policy, our support is a matter of course. If, on the other hand, the plan of the Loan is faulty and if, as a result, there is disruption in the giltedge market, the resultant situation is such that if the Loan were a success, the "rot' would be arrested, and if the Loan were a failure, there would be further accentuation of the rot. We have, therefore, to prevent greater disaster, by pointing out that once the Loan, despite its faulty planning, were fully subscribed, there was every ground for hoping that the securities market should show recovery on the strength of the successful outcome of the loan issue. A well-planned New Loan deserves our boost; an ill-planned loan needs our boost, lest it should inflict greater harm than is unavoidable. Let it never be forgotten that in a giltedge debacle, there are many other interests beside the Government, which are made to suffer. Those other interests require our constant and watchful care.

CONSCIENCE OF A NATION.

At 12 noon on Monday last, the whole of India and all those who are spiritually our co-nationals heaved a sigh of relief that the Mahatma had successfully passed through his self-imposed ordeal and had broken his long, long fast. For full three weeks, the country watched with agony the physical pain of an ever cheerful spirit. Few comprehended its true meaning and purpose. Many regarded it as more a torment to themselves than to the shrivelled frame which never counted much on the ordinary physical nourishment. But all alike watched the Mahatma as the pious Hindu watches the slow emergence of the moon from a dim eclipse. The simile would seem to be on all fours. We had as little doubt about the Mahatma's survival of the fast as about the termination of a lunar or a solar sclipse. And we are sure now that he will shine as bright in the poliical firmament as the moon often does immediately after an eclipse. The developments of the last fortnight are not calculated to strengthen our optimism ; but we feel that the path of peace beckons irresistibly to Government and Congress alike ; and that before long they must join hands in the common tasks which await them.

* * *

The root of such optimism lies in the belief that penance never fails of its electric effect. Gandhiji is the first in human history to gather together in his own life, a political philosophy, a system of ethics, an economic plan and a scheme of individual spiritual uplift. A personality so complex and a life so full and so varied are not easily comprehended. Many there are who do not feel it incumbent on them to understand him by a process of detailed differentiation from others. Others—happily too few—regard irreverance not as a help to understanding but a goal to be striven for as the permanent state of a free mind. The task of understanding Gandhiji calls for true insight and sympathy. It implies a readiness to analyse his mind, in so far as it is revealed to us, without any pre-conceived notions and to revel in its excellences, once they are found to be so. A mind steeped in orthodox notions of politics or in the grip of the other extreme of making a fetish of free thought to the utter detriment of true faith cannot comprehend either the man or the cult he stands for. Mr. G. L. Mehta shows himself to be specially fitted for the task of interpreting the Mahatma. *The Conscience of a Nation*, which he has recently published by putting together nine sketches written on different occasions over a period of a decade, is one of the few aids that the average man has for a rational appreciation of the Mahatma's greatness. Mr. Mehta, though doubtless, better known for his humourous skits in *Indian Finance*, is a serious student of politics and philosophy and of that other science which has an entity distinct from either, political philosophy. He is versed in the literature of free thought to which only true citizens of the world can contribute. To set Gandhiji in the light which others before him had but dimly perceived and to relate his teachings to the more immediate problems of this country requires the rare capacity to adjust the rival claims of perspective and proportion. Mr. Mehta's booklet is rich in this quality. With a style appropriately profound and, withal, simple, with quotations that illumine the context and are by themselves choice expressions of deepest thoughts, the sketches leave little to be desired.

JUTE.

Our Commercial Editor writes:

In my review of the jute and jute goods market published in *Indian Finance* of April 29, I expressed the opinion that whilst the position of hessian was very sound, I did not feel the same amount of confidence in raw jute section. The developments in these markets subsequent to my review have proved the correctness of the view that I then took. On April 27, when the price of 40" × 8 oz., hessian for August shipment had improved to Rs. 9/7 per 100 yds, the price for ready jute pucca bales was Rs. 32/-. To-day when hessian is quoted at Rs. 11/10, the

price for pucca bales is Rs. 34/4. This means that whilst the price of hessian since April 27 has improved by 22 per cent., the improvement in jute is only 7 per cent. The reason for this disparity in the improvement of jute and hessian prices is that, whilst there is scarcity of ready goods in hessian, the import of jute into Calcutta is unexpectedly large. Sellers have been very keen to dispose off their stocks. It is expected that the total of jute imports into Calcutta by the end of last month will be about 80 lakhs of bales.

* * *

In a recent issue of *Indian Finance* I examined at some length the statistical position of hessian. I will try to examine the position of raw jute.

* * *

It is expected that the total arrivals of jute into Calcutta by the end of the present season will be about 83 to 85 lakhs of bales. It is said that the outturn of the 1932-33 crop was not so large but that a lot of jute, which was held by dealers and merchants upcountry, is finding its way into Calcutta owing to the recent rise in the price of jute. During the last two seasons, dealers missed the market. The rise in 1931 and 1932 was so short-lived that merchants were not able to take any advantage of it. On the contrary, dealers were left saddled with large stocks purchased in a rising market. This time the holders of jute both in Calcutta and the mofussil are inclined to take advantage of the rise in the price of jute by disposing of all their holdings. I find from enquiries made amongst jute merchants that the bulk of the recent arrivals is old jute which has been held by dealers for a long time. It is said that at the end of the season there will be practically no stock left in the hands of dealers upcountry. Though the total arrivals of jute into Calcutta for the present season will be about 85 lakhs of bales, I think the outturn of the 1931-33 season crop was not more than 72 to 73 lakhs of bales. The excess over that figure is accounted for by old stocks.

* * *

At one time during the present season it was expected that the shipments of raw jute to foreign countries will not exceed 30 lakhs of bales. But now it seems that the total of exports will be somewhere about 35 lakhs of bales. Recently a very good amount of business has been done with the Continental and Dundee spinners, and therefore the shipments of jute in the present month will be considerably in excess of what they were in June, 1932.

* * *

The jute mills of Calcutta are reported to have purchased upto date about 47 lakhs of bales. Probably, another 2 lakhs of bales may be purchased by the mills during the present month bringing up the total of purchases to 49 lakhs of bales. This means that the stock in the hands of the jute mills in Calcutta at the end of the present season will be increased by about 5 lakhs of bales. There is, however, one important thing to be remembered in connection with the stocks of jute in the hands of the jute mills. Upto a few months back, it was not possible for the mills to make any large forward sales of manufactured goods. This meant that the burden of the huge stocks of raw jute was borne mainly by the jute mills. The position however has changed considerably now. The mills are well sold now up to the end of the present year and a number of contracts have also been made for the months January to June, 1934. Dut to these sales, the uncovered stocks of raw jute held by the jute mills has been considerably reduced and the burden of carrying these large stocks has been to a great extent shifted on to gunny dealers.

* * *

The course of raw jute prices during the next three months will depend to a great extent on the trend of hessian prices. Unless some unforeseen circumstances develop, there is every likelihood of hessian prices going up higher than even the present level. If hessian prices continue to keep improving, the remainder of the stock that has now been left in the hands of dealers will be readily taken up by the Calcutta and foreign jute consumers. It is believed that the Continental mills are not carrying large stocks of jute like the Calcutta mills. Owing to the improvement in demand for jute goods, Continental mills will possibly be consuming more jute. It will be sometime before the new crop will begin to move. If the expected expansion in the consumption of jute goods materialises, there is every possibility of foreign consumers buying up all available jute during the three months. In that case, before the new crop comes in there may be a scarcity for ready jute. It is also said in favour of a rise in the jute market that there is every possibility of an early monsoon this year. If, as a result of the early setting in of the monsoon, the rivers in Bengal begin to rise the lowland crops which form about 20 to 25 per cent. of the total crop may have to be cut prematurely which will mean that the size of the next crop will be somewhat reduced.

* * *

Taking into consideration the abnormally large imports of jute and the prospects of a bigger crop next year and the large stocks in the hands of consumers, the position of jute by itself does not seem to be very sound. But I think owing to the strength of the hessian market, there does not seem to be any possibility of a decline in the price of jute in the next few months. If American commodity prices continue to rise and if as a result thereof there is improvement in world trade, I believe there may be a good rise in the price of jute by the end of the present season.

* * *

As regards the prospects of the next crop, according to the reports published by some private firms, the sowings are estimated to be about 17½ annas taking the 1932-33 crop as 16 annas. The sowings this year were delayed owing to want of rain and therefore upto now the growth of the plants is considerably behind the growth during the same period last year.

* * *

If the outturn of the 1932-33 season is taken at 73 lakhs of bales, if nothing happens to retard the growth of the crop then an yield of about 80 lakhs of bales for the next season may be expected. It is believed that there will be practically no carry over at the end of the present season. The total imports of jute in 1933-34 season, therefore, will not exceed 80 lakhs of bales.

* * *

The consumption of jute in the present season will be about 80 lakhs of bales. If, as it is expected, world trade improves, there is every possibility of expansion in the consumption of jute goods. In that case, there may be a reduction in the stocks held by jute mills.

* * *

Everything, however, will depend on world trade. Statistically, the position of jute is such that it is bound to respond very quickly to the slightest improvement in world demand.

CLEANER CITY TRANSPORT.

Speaking at the annual general meeting, held on May 16, in London, Mr. John G. B. Stone, Chirman of the Calcutta Tramways Company, had a cheerful story to relate to the shareholders of the Company. Not only was a dividend of 6 per cent. for the year 1932 declared as compared to only 3½ per cent. for the year before, but the shareholders were informed that the outlook for the present year on the basis of earnings during the first quarter was quite satisfactory, and that the popularity which the tramway services have been able to attain will be maintained. From 1928 onwards, the gross traffic

receipts—which were a record in that year, having reached a total of £503,055—were continually falling. These in 1932 showed, however, an improvement of £14,266 over the previous year. The passengers carried exceeded 89,000,000, and the mileage run amounted to 9,500,000 or an increase of 6,000,000 passengers and 500,000 miles. The advent of motor bus on the treets of Calcutta made a great inroad in the revenues of the Tramway Company. For a long time, the Company resisted the demand for lowering the fares till it become absolutely evident that unless the fares were revised, there was no hope of stopping the continued fall in the traffic receipts. The Chairman informed the shareholders that the improvement in the revenue began soon after 1931, by which time a considerable revision of fares was carried through. The placing of the new type of cars on the rails added to the popularity of the service ; and the Chairman asserts that their vehicles compare favourably with those of any other similiar undertaking in any part of the globe. This programme of replacing the old cars by the new models has already justified itself in the better earnings showed by the improved type of cars. The new single cars earn as much as the present combination of "motor car and trailer," while the earnings of the new articulated cars have proved to be 30 per cent. higher than the present figures of the old model cars.

* * *

Tramways generally are being superseded by the motor and electric buses in the great cities of the world ; and it speaks well of the management of the Calcutta Tramway Company, that they have not only met the competition of the motor bus service successfully but have also increased their popularity with the public by providing a cleaner, healtheir and comfortable transport service in the City. Perhaps, it is not generally known that the Corporation of Calcutta and the Municipality of Howrah are both entitled to take up the properties of the Company on January 1, 1938 and again after every subsequent period of seven years by paying a purchase price, fixed at 25 times the net yearly earnings of the Company, based on an average of preceding seven years. But we hope that there will be no occasion for the Corporation to exercise this right, if the Company is able to maintain its popularity as at present. We may, however, say that we are not in favour of the monopoly of public utility services being given to private enterprise. But the tramway has every reason to fear ousting from more mobile types of transport. This fear is always there. We are, therefore, against the Calcutta Corporation taking on an undertaking, whose future is best in the hands of those who have built it up and also put by suitable reserves against future contingencies ; and whose value as an asset may be adversely affected under new proprietorship.

FUTURES MARKET.

Calcutta seems to suffer from a needless fright of futures markets. There are futures markets in all commercial centres of the world and for all important commodities. It is only in Calcutta and mainly in regard to jute that utmost prejudice has been worked up. The result is that raids by the Police on futures markets have become a common feature in this City. So long as the position remains undefined, the Police authorities are in a most embarrassing position. If they do not take action, the self-constituted stalwarts for purity and *bonafide* business blame them for doing nothing to stop gambling. If they take action, discomfiture awaits them in not a few cases. We understand that the Calcutta Shellac Exchange was the recipient of police attentions last month ; that the names of the Directors were noted ; that these Directors had to give a bail of Rs. 1,000 each ; and that, in less than a week, they were informed that the matter was being dropped. Neither the Police authorities nor the authorities of futures markets are happy while this uncertain state of affairs prevails. There can be no law preventing futures trading as such. But there could be, and should be, clear legal provisions which should define the conditions which a futures market should satisfy. Once an Exchange fulfils such conditions, it should be able to carry on its transactions unmolested by raids, and undaunted by the perennial nightmare of impending prosecution.

THE READING ROOM

Silver and the Foreign Debt Payments: By Carl Hayden: United States Government Printing Office Washington: 1933: 29 pages.

The inflation amendment to the Farm Bill, which has been recently passed into law in the United States of America, has empowered the President to accept not more than 100 million dollars of silver at a price not exceeding 50 cents an ounce in payment of war debts. And the silver enthusiasts in the States have followed up this legal enactment with an informal understanding among the delegates to the World Economic Conference of the U.S.A., Canada and Mexico. The terms of this understanding, which were announced some time ago by Senator Pittman, have been referred to in *Indian Finance* in the section on "Finance Abroad." It is interesting in the light of these developments to learn the results of the original investigation conducted under official auspices into the use of silver coinage in the European countries whose governments are indebted to the United States. The idea of improving the price and status of silver through an offer to accept part of the war debt payments in the white metal originated with Senator Carl Hayden. And his first initiative took the form of a telegram to the President dated November 27, 1932, in which he suggested that the United States accept 95,000,000 ounces of silver in full settlement of the payment due from Great Britain on December 15 upno two conditions, that the British Government acquire an equal amount of silver to restore its coinage to at least nine-tenths fine and secondly, assurance is had from the British Government for India that no silver owned by it will be sold except to the British Government in London for coinage purposes. Mr. Hayden contended that there was no real overproduction of silver; and that the great fall in the price of silver was due to the debasement of British coinage and the sales of the Government of India in the open market.

To make sure of this thesis and the scope for improvement in the silver position through the part payment of European debts in silver, Mr. Hayden submitted a *questionnaire* which he suggested should be sent by the Department of Commerce to all its foreign offices. The pamphlet under review is the collation of the replies to the *questionaire*; and, needless to say, it does not refer to countries which are not debtors to the United States. But Mr. Hayden's remarks are more comprehensive and enable a fuller appreciation of the position of silver in the world as a whole.

In addition to the replies secured by the Department of Commerce, Mr. Hayden provides statistical information regarding the receipts for the fiscal year 1933-34 the percentage of silver holdings to the total metallic holdings of the principal banks of issue for the quinquennial period from 1900 to 1929 and estimated sales of demonetised silver according to country of origin for the period 1920-32. The last two tables have naturally more interest for the Indian reader and it is worthy of note that the percentage of silver holdings of principal banks of issue has declined from 24.5 in the five year period 1900-04 to as low as 7.1 during the period 1925-29. Likewise, the total sales of demonetised silver went up from 27 million fine ounces in 1920 to 71 million fine ounces in 1930. The figure for 1931 is estimated to be 68.8 million ounces. 1932, however, showed a fall to 46.6 million ounces; and Mr. Hayden adds that, "although the total sales have been declining during the past three years, the movement is apparently not at an end." Apart from the trends in the future, it is certain that the addition of 541.5 million fine ounces of silver demonetised during a period of 12 years to the total stocks of the metal on the market must remain as a dead-weight on prices unless the nations agree on a programme of re-absorption of silver into currency and reserves.

As mentioned already, the purpose of the enquiry set afoot by the Department of Commerce at the instance of Senator Hayden was to ascertain the scope for increased use of silver for monetary purposes. The figures cited above should, by themselves, suffice to show two outstanding facts: "First. That without a proper realisation of the ultimate effect upon price levels throughout the world, nation after nation, to gain a temporary advantage for itself, has in recent years debased or demonetised its silver coinage. The silver thus obtained has been thrown upon the market driving the price of that metal to the lowest point in all recorded time, with repercussions which have been felt in every avenue of trade. Second. That since 1900 there also has been a reduction of over two-thirds in the use of silver by central banks as a reserve against issues of paper money. Instead of using silver as a handmaiden to gold, a greater burden has thus been placed upon the yellow metal with a consequent enhancement of its value."

In both the respects indicated above, the United States could do much to improve the position. Now that the President has been authorised by the amendment to the Farm Bill to accept part payment of war debts in silver and the American Administration is determined to espouse the cause of silver to its utmost power, it may be hoped that the improvement in the price of silver, which has been witnessed during the last one month, will not only be sustained but be improved upon in the coming years. Of the benefits of a higher price of silver to world economy in general, and the Far Eastern countries in particular, the readers of these columns will not require to be told at length. The question has been discussed on more than one occasion; and at the moment the one thought is how far America would be able to improve the status of the metal on which the western world has more or less turned its back for ever a quarter of a century.

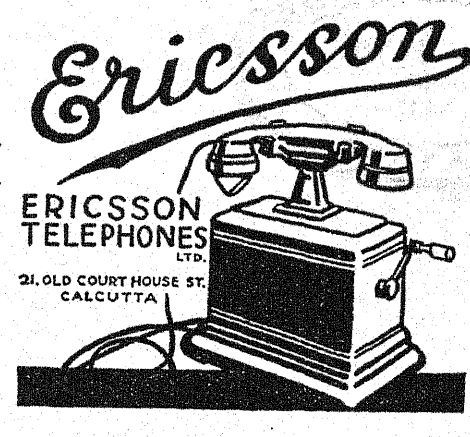
Clive Street Gossip



The investment studies I have promised have to stand over till next mid-week, when we propose to inaugurate our new scheme of permament mid-week supplements. There will be, in the course of a month or two, three definite features of this kind—an Industries Supplement, a Trade Review Supplement, and a Railway Supplement. On each of these topics, there will be a monthly supplement. To start with, the Industries Supplement will be issued in the course of next week ; sugar will be dealt with in all its phases. In the succeeding issues, jute, cotton, tea and coal will be added according as our gathering of the relevant data is completed. As we have to deal with sugar at some length in the course of the next few days, I am reserving my investment study for the Supplement. Meantime, I have, in response to numerous requests, set down, in to-day's Gossip, my ideas of a Reserve Bank in simple terms intelligible to the lay reader. It is essential that the public should have clearer ideas on this subject. The last Reserve Bank Bill was killed by an Assembly the members of which, barring half a dozen, did not know the difference between a Reserve Bank and a Bank with a Reserve Fund. My main purpose to-day is to indicate the place of a Reserve Bank in national economy and the essential principles to be kept in view in the study of the draft scheme.

* * *

I may state the case for a Reserve Bank thus : The main objection to a sterling exchange standard is that it perpetuates the system of what is called managed currency. Managed currency is really an euphemism for manipulated currency. India's standard has not, in various stages, functioned properly but has just limped along because it has always been subject to manipulations. Such manipulations are all the more serious and beset with evil results as the administration in this behalf is in the hands, not of competent central banking authorities as in other countries, but of departmental officials. In the generality of cases, the Controller of the Currency, who is mainly responsible for the administration of the Currency Department, is recruited from the ranks of the Indian Civil Service. He has had to learn aught of finance and currency only at a late stage in his official career. He has no banking experience whatsoever. He has no direct or intimate contact with the money or other markets. However clever the men in the Heaven-born service may be, it is unthinkable that an official, who is for all practical purposes an amateur, can be left in charge of the working of the currency standard. It is not the Controller of the Currency's fault that his management of currency has been condemned as manipulation. It is a wrong system in which a departmental official without proper training, equipment and experience is asked to administer the affairs of a department in which great skill and insight, correct instinct and ready judgment are required. An urgent reform from this point of view is, therefore, the transfer of currency administration from the hands of departmental officials to a central banking institution in which the officials are competent and skilled in this matter.

Let me, in this context, pose these questions : Do we need a Reserve Bank ? Have we the conditions necessary for the establishment of such a bank ? What purpose can it fulfil in our national life ?

If I am to answer these queries, let us forget that there is a White Paper. Politics has nothing to do with this question. We have, for ever so long, needed a Reserve Bank. Reform or no reform, the question is purely one of economics. Whatever the constitution, whoever runs the country, we need a Reserve Bank. Even if the Government were manned entirely by Britishers, we require such a bank, on sheer economic grounds.

* * *

In India money transactions have been conducted from time immemorial. She has throughout financed effectively her internal trade and agriculture. She will continue to do so whether there are modern banks or not. But what we want is the machinery of a Reserve Bank to mobilise the immense resources which are working at present on parochial, crude, related, regional lines.

* * *

But whether or not it is relevant, the British authorities have laid it down that such a Bank is a preliminary to the setting up of the new machinery at the centre and that certain conditions have to be satisfied. They are :

(1) That the budget must be balanced ;

(2) That short-term debt must be funded and early loan maturities converted into long-term issues ;

(3) Sufficient sterling and gold reserves must be built ;

(4) Normal export surplus should be assured.

As regards item 1, the budget is already balanced. If I differ personally and hold that the budget is not balanced as it should be, I know it can be balanced and can give alternative methods. But that is beside the point. The first condition is, therefore, fulfilled.

* * *

As for the second, real progress has been achieved and there is, despite the reverses of the past month, every favourable condition for carrying out this programme further.

* * *

As regards sterling and gold reserves, it is difficult to believe in the *bonafides* of this condition when every effort has been made *not* to strengthen these reserves. However, in spite of the Government, we have now very much more of gold and of sterling securities than before.

CALCUTTA—26, DALHOUSIE SQUARE.

BOMBAY FORBES BUILDING, HOME STREET.

Clear Striking Proof!!

In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

The fourth condition is about export surplus. To let a normally assured surplus of Rs. 50 crores to Rs. 70 crores to sink to a level, in which merchandise surplus is practically non-existent, hardly speaks well of the policy of the Government as being inspired by truly national economic interests. If you take a Government publication like the monthly volume on "Seaborne Trade," emphasis is on imports and not exports. The first place is assigned to imports. This shows the bias of the authorities. You cannot produce export surplus until that mentality is changed. Gold exports will not last eternally They will dry up one day. Government must remove this bias in their economic policy—the bias in favour of imports.

* * *

Here is India, with absolute monopoly in jute and shellac ; as near a monopoly as possible in commodities like hessian, myrabolom, chrome, goatskin ; and partial monopoly in commodities like coffee, copra, rise and tea. And there is a large world demand for these. That such a country should not have export surplus only shows that there is something wrong with the people who are looking after the economic interests of the country. There is a way to assure better prices, resulting in improved trade balance, steadier exchange and greater purchasing power of the masses. And, after all is said and done, masses can keep buying imports only if there is surplus on international account.

* * *

Therefore, the position comes to this: that even the conditions which British authorities have laid down are more or less fulfilled and you can have a Reserve Bank to-morrow. I do not, I repeat, agree that these conditions are essential for its establishment. Examine the test which the League of Nations applied when round about 1925 it undertook the monetary reconstruction of countries with war-wrecked currencies ; it gave a Central Bank to create these conditions, and not because such conditions existed. In fact, those conditions did not exist. However, we are to cope with political prejudices and bias as against India. But, even then, India stands more firmly than any other country to fulfil the so-called preliminary conditions.

* * *

The real question is: Why do I want a Reserve Bank?

I want a Reserve Bank because, as I have said, I do not want the administration of currency to be in the hands of departmental officials. Barring an exception or wo, these officials are drawn from I.C.S. Imagine a man trying a decoity case in the Mymensingh district suddenly pitch-forked into a position where he has to learn all about controlling currency. Most of our currency troubles are due to amateurishness on the part of officers who, admittedly able, cannot, however, be expected to have the instinct to smell the money market, and say what is coming ; that aptitude comes only by early and daily contact with the world of finance.

* * *

And, after all, what is meant by money market? In one part of the year, Government take away money from the market in the form of taxes, and over the year they disburse money to the market in the form of salaries and public expenditure. This means that there would be too much money in one part of the year and too little in the other. It is essential that during the period when Government drain funds by way of taxes, this money should still be available to the market. In other words, no money market can function well unless there is unification of currency and credit ; which means that the authority which issues currency and the authority that holds Government balances must be the same. There must be give and take from a common pool—inflow and outflow according to time and conditions.

Then, there is gold which is the basis of currency. There is currency which is the basis of bank credit. If I have a thousand rupees, I keep in currency only Rs. 20 with me and the remaining Rs. 980 lies with the Bank, and the Bank is using this Rs. 980 to finance such others as need financing. In other words, for that credit of Rs. 980, the basis of currency is only Rs. 20, and the basis of this currency is only Rs. 7 worth of gold. Thus, Rs. 7 worth of gold gives an ultimate credit of Rs. 980. If, however, people lose confidence in the banking system, then the Rs. 980 will be in large part withdrawn from the bank and hoarded as currency. There will be contraction of bank credit and expansion of demand for currency, with the result that you will have to find more gold. Gold is the reserve which a Central Bank maintains for its currency, and currency is the reserve which banks maintain for the total bank credit. It is essential that suitable machinery should exist with a view to keep the market well poised so far as reserves and currency and credit are concerned.

* * *

Again, this Reserve Bank should be able to issue additional currency if banks give suitable security, and, what is still more important, the Reserve Bank should be able to defeat any conspiracy which the other banks may enter into to create money conditions opposed to the objective of the Reserve Bank. In that case, the Reserve Bank can lend direct to the market and nullify the effect of that cinspiracy.

Let us sum up:

(1) We want a Reserve Bank because we want such transactions of the Government as pertain to the market, to be carried out by an agency which knows its business.

(2) We want a Reserve Bank because there must be unification of currency and credit.

(3) We want a Reserve Bank because we want an institution which will, on the one hand, regulate and exercise discipline over other banking institutions and, on the other, extend necessary and adequate facilities to them.

(4) We want a Reserve Bank because we want a unification of the reserves behind our currency and credit.

All of which means that such a bank is a Government Bank, a Bank of Issue, a Banker's Bank or a Reserve Bank according to the point of view in emphasis.

* * *

But what sort of a bank would this be and what model should we select?

I hate the very idea of having a model. When, in the second decade of this century, U.S.A. set about establishing a central banking system, she was not content to copy the model of any of the then-existing central banks, like the Bank of England or the Bank of France or the Netherland Bank. She made a thorough study of the question, particularly from the point of view of domestic conditions, peculiar local needs and special conditions and predilictions of the American economy. In other words, the Federal Reserve Bank system of America has taken the broad features from the Central Banks in other countries, but has laid equal emphasis on those modifications necessary for the local requirements. That is what we want in India. From this point of view, for the establishment of this institution which, Sir Basil Blackett said, would confer financial Swaraj on India, we would prefer that it he a State Bank with the necessary resources found by the State. If a State Bank is not acceptable, then only Nationals shall be allowed to hold shares. In no country in the world (so far as I am aware) are non-nationals allowed to hold shares.

SIR OSBORNE SMITH.

BRUSQUE AUSTRALIAN AND BRILLIANT BANKER.

It was as Managing-Governor-Designate of the then proposed Reserve Bank of India that Sir Osborne Smith came out to this country seven years ago, a brusque Australian with all the vim and vitality associated with a young Dominion, a banker who had had intensive and extensive experience of leading international financial centres like London and New York, a new entrant to the field of Indian banking with a fresh outlook and an eager eye and ear for all that had to be seen and heard.

He had no doubt in all that he knew. Nor had he any doubt that he had to learn a deal about India, her men and her business, her psychology and her idiosyncracies. He set himself to his task of learning, with zest and thoroughness. He travelled all over the country; he visited the important business centres; he met the leading businessmen, Indian and European; he did all that he could to understand and appreciate the local colour. In less than a year, he came to know India and Indians as shrewdly and as intimately as few foreigners could have known in ten.

Thus did he equip himself for an office, which needed knowledge of both domestic and international finance. It was during this period of his "probation" that we chanced to know each other.

In 1926, I wrote, as a free-lance journalist, an article on the Reserve Bank, suggesting that the Bank should have its entire capital found by the State; and that the requisition of the services of "Mr. Oliver A. Smith" of the Commonwealth Bank of Australia was calculated to give the impression that like the Australian institution, India's Central Bank should also be a State Bank. Mr. Smith (as he then was) wrote to me promptly correcting my mistake about his Christian name and expressing a desire to get in contact with me at the earliest opportunity.

We have known each other for over six years—two men with definite and clear-cut views, men susceptible to strong bias for a against, men who would air their opinions and convictions with propagandist fervour. I think I may go so far as to say that this very aggressiveness of personality of each one of us has, more and more, fostered and strengthened our mutual esteem.

However, Sir Osborne is, I must admit, too pugnacious, virile, and vehement to suit the taste of the routine, work-a-day world. To like him is to pay oneself the compliment for a like vividness of personality.

The man in the street might consider him too domineering. The prosaic, matter of fact businessman might find it too difficult to keep pace with him. The mediocre on the staff of the Bank of which he is the Head might deem him even autocratic. Sir Osborne is not the one to please or suit the "crowd."

He may not be in his element in a crowd or with the mob. But at a conference or on a committee, his will be the dominant voice and guiding influence.

His colleagues on the Central Board of the Imperial Bank are inspired, at each contact, to great and greater confidence in the man at the helm of affairs. They adore him for his dash and brilliance no less than for his sharewdness and insight. Here is a man, they feel, who decides quick and decides correct; who has, at once, a vision of policy and a grasp of details; who can be trusted alike for humdrum affairs and abnormal or critical occasions.

A God to his colleagues, his feet of clay were the only limbs espied by the mob of shareholders gathered in the Bank's annual meeting two years ago. "You ought to have done this;" and "you ought not to have done that," they said; and they pestered him with a hundred questions and queried him over a miscellany of grievances. Sir Osborne could swear lustily. He did swear on the occasion. "Who the h- -l are you to teach me my business?" —he asked in effect.

"We are your bosses"—they answered in angry chorus.

Feeling ran high; great excitement prevailed; and there was pandemonium. The man, who was head and shoulders over the rest in a conference or on a committee, was unequal to tackling a crowd, to dealing with the mob.

The meeting broke up in anger; a sub-committee was appointed by the "agitators" to look to the further stages of the work. Sir Osborne met the sub-committee frequently and discussed with them freely and frankly.

Result?

The committee taking the place of the crowd, Sir Osborne was in his element again. The critics, who came to scoff, stayed to pray. Anger yielded place to esteem; bickerings to mutual understanding; and discontent to reciprocal gratitude.

Those that might have turned into Shamdasanis are now amongst Sir Osborne's warmest admirers. And, on his part, Sir Osborne was not less graceful in his acknowledgments. In the last year's speech of the Bank's President at the general meeting, Sir Osborne included a generous tribute to the help rendered by the Bank's erstwhile critics.

All's well that ends well. Sir Osborne has learnt an invaluable lesson in the matter of negotiating with the "many." Get together the "few" that represent the "many;" and deal with the elected select; there can be no further room for avoidable differences of views.

Even the routine people, once they learn to understand Sir Osborne aright, will ever retain respect for him. He has all the elements of greatness, including sportsmanship. I use "sportsmanship" both in the literal and metaphorical sense. A "sport" can never lose popularity if and when he wins it from the crowd.

Sir Osborne has called one of his racing horses "Helofalot." This is significant of the man. It betokens his *bon homie* and his sturdiness of personality. I have always known Sir Osborne as a H- -l of a good man, a clever banker and a great gentleman.

OLYMPIA

British Officials versus Indian Officials: Communal Witnesses: Dr. Moonjee's wire-pullings: Mahatma's return to Politics or Jail?

(From Our Correspondent).

Simla, May 24.

A great deal of interest is being taken here in the witnesses who are going to London to present their respective points of view before the Linlithgow Committee. The previous Round Table Conferences showed that there was enough division of opinion among the delegates to justify the plea on behalf of the Conservatives that they should proceed cautiously. Now, unfortunately for the I.C.S. interests, the Indian Delegates in London would appear to have made up their minds to present a united front.

* * *

It is hoped by the authorities here that the witnesses from India would be able to show that differences of opinion are as sharp as ever. They expect, for instance, some orthodox Hindus, and leaders of the mentality of Bhai Parmanand, to declare that they do not want full responsibility even in the Provinces lest the Muslims or the non-orthodox element betray 'national' interests. Similarly it is expected that the Muslim Delegates would be able to show that they have more faith in Englishmen than in their own countrymen.

* * *

At any rate, it is calculated here that the expense which the British Government will incur in paying for the passages of these witnesses, and one pound a day for their stay in London, will be repaid by the manner in which the witnesses will undo the work that the delegates are attempting to do.

* * *

Where, perhaps, the European members of the services are most upset is about the projected visit of Sir Vijiaraghava Achariar, Mr. J. G. Bhandari and another Indian official to represent the views of the Indian Officers' Association. Those, who recall how in Madras the Lee Commission was puzzled to find the Indian Officers' Association advocate a liberal policy, can visualise the shock the Indian officers would give to the Joint Select Committee by endorsing the political aspirations of their country.

* * *

Broadly speaking, the point of view of the Indian officers would be that they are not worried about coming changes ; and that, in fact, they would be only too glad to work under the orders of their own countrymen. They would ask for no guarantees as service men, except the usual guarantee which Civil Servants all over the world require for proper investigation by a public service commission before their services are censured or dispensed with. They would point out that 99 per cent. of the Government servants who run the administration of this country are Indians and that if they have no distrust of the constitutional changes, there is no reason why the top officials, who are foreigners, should demand any undue safeguards.

* * *

The European point of view is entirely different. They maintain, as strongly as ever, that they should remain under the protection of the Secretary of State, that their right of premature retirement should be acknowledged indefinitely and that their pensions should be safeguarded by Parliament. Of course, these were the arguments that were put forward before the Lee Commission ; and, at that time, the argument most effectively used was that if Parliament were asked to guarantee the pensions of Civil Servants in India, no other measure would be necessary to shake the credit of India.

* * *

But, perhaps, the point on which the I.C.S. feels most keenly is that the prize of Governorship ship should be theirs exclusively. In fact, I am told that private advices have been forwarded to London, indicating that the support to the White Paper scheme of the men "on the spot" is conditional upon their having Governorships reserved for I.C.S. and Chief Justiceships being thrown open to them. They think that in the future, the Governor would be the key-man and that if this post is in the hands of the I.C.S., the Ministers would be at their mercy and politics would be run according to the standards laid down by the Governor.

* * *

And I am told by Sir Chimanlal Setalvad that the one point, on which the Indian Delegates must concentrate in their efforts to have the reforms scheme amended, is to remove the I.C.S. from those eligible for Governorships and Chief Justiceships.

* * *

Now to matters of immediate interest. I understand that Dr. Moonji, now in Simla, has come to canvass a seat on the Joint Select Committee. Mr. N. C. Kelkar was originally chosen for the honour of representing the "communal" Hindu view but he is ailing and cannot proceed to London. Dr. Moonji has attended two sessions of the R. T. C. ; and though he boycotted the third, his seat did not remain vacant as Pandit Nanak Chand filled it readily. Now Dr. Moonji holds that there is no one whose claims are stronger.

* * *

But, whereas formerly he rejected an offer, now he is pleading for one! Probably, the Viceroy will take a charitable view and the Hindu Mahasabha leader would be sent in place of Mr. Kelkar. Dr. Moonji could have gone on the Mahasabha ticket but he feels it below his dignity to go in the capacity of a witness.

* * *

Of course, there is no talk here regarding Congressmen being asked to go to London. That chapter is closed. And so long as Lord Willingdon is the Viceroy and Sir Harry Haig is the Home Member, Mr. Gandhi will get no better terms. He is either to surrender completely or to retire from politics or to be ready for being re-arrested. Already the officials are not over-happy that he has come through the ordeal so successfully. They think that the Harijan question is a political manœuvre and once they clap him into jail—this time after some form of a trial—he will be treated strictly as a prisoner undergoing imprisonment and enjoying no facilities for Harijan or any other work.

* * *

And finally a word about Aden. The issue seems already finished. The colony is going to be handed over to his Majesty's Government. The decision is *pucca* but the formality or farce (whatever term you prefer) of "consultation" with the Legislative Assembly has to be gone through. Inspired statements have, be it noted, begun to appear in the Anglo-Indian press suggesting that the Muslim population wants a change.

HILLBIRD.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

The Government are putting to the utmost use the change which Mr. Ramsay MacDonald was able to effect in Mr. Roosevelt's formula for the tariff truce. While Mr. Roosevelt's original intention was to prevent the addition of any new barriers to trade, MacDonald successfully watered it down to the prevention of only new initiatives in that direction. The British Government are in a position to claim that every possible protection they may desire to impose to-day has been already in project and is, therefore, allowed under the terms of the tariff truce. On Tuesday, Parliament discussed a new batch of orders under the Import Duties Act. The commodities affected are peat products, rubber footwear, linseed oil, potatoes, pottery, clay products, fabric gloves and baskets. The merits of the protectionist case in regard to each one of these articles have been discussed earlier in these columns; and suffice it here that none of the valid objections against these protective duties has weighed with the Government. And it is certain that they will be added to the permanent tariff of the country. It is, however, noteworthy that in the case of rubber shoes, the Japanese imports, which, according to the Government, have increased in a manner that the multiplication table is unable to keep pace with it, have been largely at the expense of foreign countries, so that the indigenous trade has no reason to complain that the situation as affecting them has changed in any considerable measure. And what is more, the largest manufacturers of Plimsoll shoes in England, according to the *Economist*, have declined to associate themselves with the other manufacturers when the case came up before the Advisory Committee last year. The manner in which the duty on fabric gloves has interferred with the more valuable export of fabrics from Lancashire to the suppliers of the English market in Germany has been already mentioned in these columns. The fact that the trade was well represented in the House by the members from Lancashire and that so convincing a case has made no impression on the Administration is only a measure of the protectionist sentiment which now rules over the Government of Britain.

More Trade Treaties.

The trade agreements now concluded with Norway and Sweden are so much like the earlier deals with Germany, Denmark and Argentine that they hardly call for any lengthy comment. At present, they are valuable in so far as they tie the hands of either country in respect of further increases in import duties. For the reductions agreed on are quite inconsiderable. The two agreements contain schedules by which Norway and Sweden are not free to levy duties above a specified maximum rate. In the Norwegian schedule mention is made of 57 of such items, of which 33 are to be stabilised at the present level. The Swedish schedule contains 104 items of which 70 are stabilised. In the other cases, Great Britain has stipulated for slight reductions in a schedule which is moderate compared to that of other countries. For a period of three years, the British Government undertakes, among other things, to keep on the free list wood pulp and newsprint and also telegraph poles which are now taxed at 10 per cent. The duty on certain classes of sawn wood box boards and granite blocks is reduced by 5 to 10 per cent. Wrapping paper will be subject to a duty of 16 2/3 per cent. as against 25 per cent. The duty on certain classes of writing paper will also be reduced to the same level. In addition, "the existing duty of 33 1/3 per cent. on steel imports is reduced in the case of certain highgrade steels to 25 per cent. and 20 per cent. *ad valorem* according to the range of prices, but with the proviso that a specific duty may be charged which will have the effect of increasing the *ad valorem* duty in the event of any lowering of the existing prices." The present 10 per cent. tariff on a number of articles including fish, butter and eggs has also been stabilised.

As regards the quota, the British Government declares that in any scheme of quantitative regulation it will try to see that imports from Norway of bacon, butter, cheese, eggs and poultry remain unregulated. If, however, quantitative regulation should become necessary as a result of increase in the imports of such products the British Government bind themselves to consult the Norwegian Government before coming to a decision on these questions. Sweden is to have an equitable share of permitted foreign imports having regard to the total proportion of foreign imports supplied by Sweden in recent years. In return for these, Great Britain is to have an assured slice of the Scandinavian coal markets. Great Britain has reserved for herself the right to terminate the agreement if in any period of 12 months the coal of United Kingdom origin imported into Norway is less than 70 per cent. of her total coal imports and less than 47 per cent. of total Swedish imports. Though the British Government made exaggerated claims about the value of this proviso, it is certain that it will save British coal from being driven out of Scandinavian markets by Polish and German competitors.

Turn in Giltedge Tide?

The fall in giltedge securities, which continued throughout the whole of last week, has brought to the fore the question whether we have not, after all, neared the turn in the giltedge tide. To this larger problem, the immediate causes of the fall of last week are of comparatiyely little relevance. For aught we can see, it might have been caused by the nervousness of people regarding the political state of Europe and the fears of another war. The attitude of Germany at the Disarmament Conference, as it seemed a week ago, and the rapid realignment of alliances on the Continent lent strength to such nervous apprehensions. But so far as the giltedge market was concerned, the risk of war would as readily have served as the ostensible cause, even if giltedge had risen instead of falling. According to the *Financial News*, a more convincing suggestion than either the threat of war or the anxieties for the King's health was that "in almost every year there is for some reason, guessed at but not explained a fall at about the beginning of May and that this year a rather heavy test was put on the market by the issue of the India loan just at the vulnerable period."

But as mentioned already, the immediate causes have no relation to the larger phenomenon of an imminent ebb in the tide of giltedge. In explaining this question, the *Financial News* attempts to distinguish four different stages in the fortunes of the giltedge market. In the first period investors believed that the lower rates of interest on giltedge were more than offset by the lower risks as compared with other securities. The second stage came when investors began to find positive attraction in the speculative probability of the rise of giltedge prices. And the third stage was one of equilibrium, where the risks and attractions as between giltedge and other investments approximately balanced and no great change occurred in the relative level of either. The fourth stage, if and when it comes, would be marked by the impact of better industrial prospects on the giltedge market. There is a feeling that industrial prospects are better now than for a long time before; and statistics seem to lend support to such a feeling. This naturally means that investors would feel called upon to make a slight readjustment of their risk

Air Mail Week.

estimates. It may be that in the initial stages the readjustment may not produce selling of giltedge but may just induce the withdrawal of some of that support from giltedge which before held the Consols market in equilibrium with others. The foregoing analysis of the position has been offered by the *Financial News* under the cautious and modest caption "A View on Giltedge." And the journal has also taken care to emphasise that the possibility of giltedge having already touched their highest point "does not mean, however, that there is any reason to believe that a 'crack' in the giltedge market has started."

UNITED STATES OF AMERICA.

THE PRESIDENT ON WAR DEBTS AND DISARMAMENT.

The policy and actions of the Administration to-day are governed by the belief that disarmament holds the key, so to say, to the solution of many other international problems. Whether or not there is any organic relation between the reduction of armaments and financial and economic reconstruction, it is certain that the time-table now agreed on for the various international conferences at London require that the talks on disarmament should result in some amicable understanding. At any rate, if the disarmament conference should end with accentuating the suspicion and bitterness amongst the nations, the prospects of the World Economic Conference would be reduced to nothing. And it must be remembered that in Mr. Roosevelt's talks with the representatives of foreign nations, there was complete agreement that a reduction of armaments is an essential preliminary to an acceptable settlement of the question of war debts. And it is to-day a truism that without some understanding on the question of war debts, the World Economic Conference would be able to achieve nothing.

Mr. Roosevelt's Appeal to Nations.

It is not surprising, therefore, that Mr. Roosevelt should have expended much time and energy in drawing up an appeal for thorough-going disarmament addressed to the heads of 44 nations. In this appeal, the President urges that "the world cannot await deliberations long-drawn out" and that it is a vital necessity that speedy action should be taken at the World Economic Conference in London as well as the Disarmament Conference at Geneva. "The former must establish order out of chaos by the stabilisation of currencies, freeing of world trade and international action to raise price level. Commonsense points out that if any strong nation refuses to join with genuine sincerity in these concerted efforts for political and economic peace, one in Geneva and the other in London, progress can be obstructed and ultimately blocked." In these words, the President establishes the intimate relation between political and economic peace; and he proceeds to point out that the first reason for armaments, which in spite of the lessons and tragedies of world war are to-day a greater burden on the peoples of the earth than ever before, is the desire, disclosed or hidden, on the part of Governments, to enlarge their territories at the expense of sister nations. The second reason is the fear of the nations that they will be invaded and the justification for this fear is that modern weapons of offence are stronger than modern weapons of defence. He asks, therefore, every individual nation to agree "that it will send no army or forces of whatever nature across its frontiers" and deprives the ultimate aim of the disarmament conference as "the total abolition of all weapons of aggression and defence." The most appealing part of this appeal urges that, if the progress of the Conference should be obstructed "the civilised world seeking both forms of peace will know where the responsibility for failure lies. I urge no nation to assume such responsibility and a selfish victory is always destined to ultimate defeat."

Agreement on MacDonald Plan.

The practical suggestion made in this appeal is the immediate adoption of the MacDonald plan, as broadly outlined, for the substantial reduction of some offensive weapons and the total elimination of others on an agreed date by an agreed procedure. And Mr. Roosevelt advocates an arms truce whereby no nation shall increase its armaments and the existing treaty limits until the MacDonald plan has been adopted. The purport and purpose of this appeal are unmistakable. It is, in the first place, a reminder to Germany of the tremendous responsibility that she would be taking upon herself by any attempt to sabotage the disarmament conference. Secondly, it is a bid for a large measure of support for the MacDonald plan which had, from the beginning, recommended itself to Mr. Roosevelt. Thirdly, it is in effect an assurance that, given a degree of co-operation over the question of disarmament, Mr. Roosevelt would personally do his best for accommodating American opinion to the needs of Europe's political and economic reconstruction. That soon after the release of this appeal Germany hould have signified her acceptance of the MacDonald plan is a measure of the effect which it has had on foreign nations.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

Wilson's Blunder Avoided.

Having given such a lead over the questions before the disarmament and World Economic Conferences, it is only prudent that Mr. MacDonald should attempt to be clear about the policy he would pursue at home in regard to war debts. It was pointed out in these columns last week that in consideration of the state of opinion in the Congress generally, Mr. Roosevelt might ultimately decide on a course of drift by which it is meant that he would even go to the length of winking at European defaults and continuing the discussions and negotiations over the question of war debts and keeping in touch with the Senate at Home by constant reports and references. The week has shown more clearly that this action has recommended itself more to Mr. Roosevelt. The advantages of this policy are neither vague nor few. He would, above all, be avoiding the blunders committed by President Wilson when he ignored the Senate altogether in his negotiations at the Peace Conference in Paris. The President returned to find the country against him and his credit for effective negotiations altogether dispelled by his performances at Paris. Mr. Roosevelt, on the other hand, would be leaving the responsibility for decisions on the Senate itself and influence them at the same time by his reports of the negotiations in the international conferences. According to the press report, the President has decided to take no action on war debts. It is urged that he has decided to abandon all intentions of seeking Congressional authority either to revive the payment of war debts or authority to reach a compromise on the question.

Mr. Roosevelt's anxieties in regard to debts and disarmament have not prevented him from pursuing his policy of internal reconstruction with energy and determination. In a special message to the Congress delivered on May 17, the President outlined his campaign against unemployment. It includes among others a shorter working week with wages kept at a "decent level", a "great co-operative movement throughout all industry" facilitated by a modification of the Anti-Trust laws which stand in the way of combinations even when they make for large economies in the interest of society as a whole. But the most spectacular part of it is the expenditure of 3,000 million dollars on public works. This together with other capital schemes recently launched would require an additional 220 million dollars for the service of the debt. The methods by which this money is to be raised are the concern of the Ways and Means Committee ; and it is for them to choose the exact types of taxation. But one source which has already been indicated to the authorities, is the sales of liquor, which have been made possible by the abolition of total prohibition. The President has, therefore, appealed to the States to lose no time in repealing the 18th Amendment, so that revenue from the sales of liquor would meet the immense cost of the programme he has framed.

The improvements in the business outlook referred to last week in these columns have been more than maintained. On the opening day and the following serious misgivings were felt about the growing menace of war in Central Europe. But later, satisfaction with President Roosevelt's message to the nations, together with the sense of relief that Herr Hitler's speech was set in a tone of cociliation revived drooping spirits ; and it was felt that the American President and the German Chancellor had together done enough to help, though probably temporarily, renewed confidence. The strength of the psychological factors may be guessed from the fact that though profit-taking has been going on at every stage and particularly so during the week under review,

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

prices of stocks have not been, on balance, much lower. The announcement of the German Reichsbank that the transfar problem was becoming more serious and that, therefore, the representatives of foreign holders of German bonds should meet in Berlin in a conference has not disturbed the market to any considerable extent. Nor has it interfered with the optimistic transactions carried out both in stocks and in commodities. The most important of the bullish factors to-day is the further increase of 4 per cent. in steel production which is now working at 35 per cent. of capacity. Electric production is 2.2 per cent. higher than this time last year at 1,468 k.w. hours. Automobile production has increased ; the Eastern Railways are having more freights than this time last year and there is evidence to show that railway traffic and car loading are better all over the country. There are, no doubt, some who shake their heads gravely at the wave of optimism that is now affecting all parts of the country and all sections of the people. They take the view that the increased purchases are due to bigger indents from dealers which is quite different from the enlargement of consumer buying, which alone is the reliable index of improving conditions. But such misanthropes are to-day, happily, in a minority. Quite respectable firms of brokers are helping to spread the view that the prospects of companies are distinctly brighter.

GERMANY.

HERR HITLER'S SPEECH AT THE REICHSTAG.

Germany, to-day, is keenly conscious of the importance of her attitude to everyone of the major international problems. The national mind has, doubtless, taken in all the broad facts of the present situation. But a detached study is none too easy after all the hectic agitations, to which the country has been subject by Herr Hitler as well as in the days of his free-lance agitation as in the shorter period of his chancellorship. There can be no doubt that Germany feels more chastened to-day and is more prepared to bring a practical outlook to bear on the questions which affect her in common with the rest of Europe and the civilsed world. This is only to be expected ; for, Germany has reason to feel that of late she has infused more confidence in herself and has also to some extent created that atmosphere in international conferences which makes for just deference to her reasonable claims. To the extent that Germany is more confident of herself she must also feel less need for the bluff and bluster associated with the Hitler of the pre-Chancellor days.

The Chancellor on the Treaty.

The nations held their breath to hear the Reich policy outlined by the Chancellor in his speech to the Reichstag. And public opinion both in Europe and in America was agreeably surprised to find that the Nazi leader was in no reckless mood to throw down the gauntlet to any and everybody. The attitude adopted by Herr Hitler has been universally recognised to be reasonable and conciliatory. In fact, the stock markets in London and New York which had sagged earlier during the week under review owing to vague fears of war in Central Europe, were found to recover later on in recognition of the lead given by the German Chancellor. Not that he minced words in his denunciation of the peace treaty or that he abated his demands on behalf of Germany. "The crisis of the present time," he said, "has its deepest origin solely in those passions which at the end of the war dulled the cleverness, insight and sense of justice of the nations. For all the troubles of the present problems are due to omissions in the peace treaty which was not capable of settling fairly and sensibly for the future the most important and decisive questions of that time." He urged that "neither national, economic nor juridical force nor the demands of nations were so settled by the treaty as to last for all time in the face of criticisms and commonsense." Of the economic consequences of the treaty, Herr Hitler said, "it is not wise to rob peoples of the economic possibilities of existence without taking into account the fact that human beings depending upon them demand the right to live."

Talking of war guilt, Hitler said that war guilt meant that "the name of victor and vanquished became formally the basis of a new international, judicial and social law and the degradation of a great people to a nation of second class at the very moment when the League of Nations was born."

The Chancellor's remarks against the Treaty, the national psychology underlying it, the insensate vindictiveness which actuated its authors and the flagrant anomalies which it led to were, in effect, a defence of the impetuosity with which he seemed to threaten the existing international order in Europe.

Assurances of Peace.

But he has shown great moderation in his plans for revision. The most important is the assurance that though the Versailles Treaty is no solution of the world's problems, "no German Government will, of its own accord, break an arrangement without being able first to supplant it by a better one.

or to any of the Company's other offices as undernoted:

AGRA, AJMER, AHMEDABAD, ALLAHABAD, AMBALA, BANGALORE, BAREILLY, BEZWADA, BHOPAL, COLOMBO, DACCA, DELHI, GAUHATI, JALGAON, KARACHI, KUALA LUMPUR, LAHORE, LUCKNOW, MADRAS, MANDALAY, MARCARA, MOMBASA, NAGPUR, PATNA, POONA, RAIPUR, RAJSHAHI, RANCHI, RANGOON, RAWALPINDI, SINGAPORE, SUKKUR, TRICHINOPOLY, TRIVANDRUM, VIZAGAPATAM

In the same way, if Germany's claim to the disarmament of other nations is based on her right of equality and is moral, legal and sensible, she is also prepared to recognise that "no fresh European war is capable of putting something better in the place of the unsatisfactory conditions which to-day exist." On the other hand, Herr Hitler urged that "neither politically nor economically could the use of any kind of force in Europe create a more favourable situation than exists to-day." The result of any European settlement by force would only be an "increase in the destruction of the European balance of power" with "the seeds for later differences and fresh complications." The Chancellor's speech to the Reichstag, though perhaps, not couched in the best literary form, reflects the exact state of mind in Germany to-day. Alike in the denunciation of the present and in his emphasis on the need for conciliatory reform, he is speaking for the nation as a whole. The motion in the Reichstag which formally endorsed the sentiments expressed in the Chancellor's speech and the demand for equality of armaments for Germany was passed unanimously with the members standing. Even as he spoke Herr Hitler was loudly applauded, especially in those parts of the speech where he recounted the wrongs inflicted on Germany and the scrupulousness with which she had discharged her obligations under the Treaty.

Demagogue turned Statesman.

The effect of Hitler's speech on foreign nations was no less remarkable. As has been observed, the stock markets showed themselves sensitive to the changes which is betokened in the outlook of the Disarmament Conference and, therefore, of the World Economic Conference. England and America feel that the Nazi demagogue is not without the higher qualities of statesmanship which alone can strengthen their hands at the Disarmament Conference. Germany regards it as a "diplomatic masterpiece." Austria and Poland are relieved at its moderate tone.

The French attitude, however, is one of caution; and there was a disposition, not free from a touch of scepticism, to see how far Germany's new "Iron Chancellor" will back up his words with deeds. But swift upon the heels of Herr Hitler's conciliatory speech came the announcement by Herr Nadolny, the German Delegate at Geneva, that his Government accepted the MacDonald Plan not only as a basis of discussion as hitherto, but as the basis of the future convention itself. "In so far as we shall have any modifications to propose, they will be conformed to this attitude."

Dr. Schacht and Foreign Obligations.

The same moderation which characterises the speech of the German Chancellor distinguishes also the attitude of Dr. Schacht, the President of the Reichstag, in relation to Germany's foreign obligations. While deciding that the position has been reached in which the regular payment of Germany's foreign obligations becomes an increasingly difficult task he also decided that no definite action should be taken without giving the creditors the opportunity of a full and frank discussion over the questions concerned. It was with this view that, before he sailed from New York, Dr. Schacht made the proposal that a Conference of representatives of the holders of German obligations should be held immediately in Berlin to consider with the Reichsbank the best means of meeting private debts. This announcement coming in the wake of Germany's repudiation of the gold clause in the Young Loan issue, created considerable unrest. German bonds were weak in London on the Saturday following the German Finance Minister's intimation that the gold clause was to be ignored. Dealers marked prices down sharply. The Young bonds on which business has been done down to 49 finished at 52 or 3 lower on the day. And the Dawes issue registered a net loss of 3½ after bargaining to 64. Dr. Schacht enabled the recovery of these issues by a more amplified statement of his intentions and purposes. From on board the *Europa*, Dr. Schacht announced through his representative in New York "we intend to protect our creditors in every respect. No moratorium for the payment in marks will be demanded. No proposal for the reduction of Germany's private foreign debts or the suspension of payments or lowering of interest rates is to be made by the Reichsbank. The sole problem is to convert mark into foreign currencies owing to the lack of the latter resulting from the continued decline in our foreign trade. Furthermore, no proposal will be made by us regarding deferential treatment of groups of creditors. We only want to discuss the position with all groups and to receive their advice."

Balance of Payments.

Thus on Dr. Schacht's demand, the problem of Germany's foreign indebtedness is a purely transfer problem. In view of this, the estimates made by the Reichsbank for Germany's balance of payments during 1933 are of considerable practical importance. The estimates which were laid before the last Standstill Conference in March are as follows:

(In millions of Reichsmarks)

DEBIT.

Short term debt service	428
Long term debt service	868
Profits of foreign investments in Germany ...	120
Other obligations (Goldiskontbank repayments, &c.)	170
Total ...	1,586

It will be seen that, according to these estimates, Germany requires a favourable visible trade balance of Rm. 1,071,000,000, or about Rm. 89,000,000 a month, in order to balance her total payments. The export surpluses for March and April were Rm. 64,000,000 and Rm. 61,000,000 respectively.

Creditors' Meeting.

On the basis of these figures it is clear that the transfer problem is growing more and more in seriousness. But it may also be expected that, when the representatives of the foreign creditors meet the President of the Reichsbank, they will endeavour to question the accuracy of the principal figures shown in the above statement. It is perhaps, necessary to mention here that the above figures vary very materially from the figures given in the report of the Basle Committee. Equally important is the fact that the German foreign trade has shown signs of improvement since the depths to which it fell in the months of January and February. But it is doubtful whether the foreigners, who will be meeting at the Conference, will have sufficient time to establish contacts with one another and to draw up an agreed plan and to make common cause in all important respects. The latest about the Conference is that in consideration of the time required by the American Delegates to reach Berlin, the Conference has been postponed from May 20th to May 22nd.

THE LEAGUE LOANS COMMITTEE.

REPORT OF WORK IN 1932-33.

The first annual report of the League Loans Committee (London), of which Sir Austen Chamberlain is the Chairman, was published during Air Mail Week ; and it gives some idea of the work done during the past year.

The Committee was formed in June 1932 to support the claims of the League Loans to special treatment. The League Loans consist of :

Austrian Guaranteed Loan, 1923.
Bulgarian 7 per cent. Settlement Loan, 1926.
Bulgarian 7½ per cent. Stabilisation Loan, 1928.
Danzig (Municipality) 7 per cent. Loan, 1925.
Danzig (Free City) 6½ per cent. Loan, 1927.
Esthonian 7 per cent. Loan, 1927.
Greek 7 per cent. Refugee Loan, 1924.
Greek 6 per cent. Stabilisation Loan, 1928.
Kingdom of Hungary 7½ per cent. Loan, 1924.

They are entitled to special consideration because all of them were raised under the auspices of the League of Nations, which fact inspired investors with confidence and secured their support.

When early in 1932 all the League loans went into some stage of default, it was realised that it was necessary to have some body to perform the task for which the banks which issued the loans, the Council of Foreign Bondholders, and similar associations in European countries, the Financial Committee of the League, and the trustees of the loans, all doubtless sympathetic to the cause of the League loans, were all, for various reasons, unfitted.

The committee was first formed in London, as half the amount of these loans was raised in Great Britain as against a fifth in America. Later it began to co-opt non-British members and indeed, right from the start its actions have benefitted the holders of League loans in all countries equally.

The committee now comprises British, American and European members, representative of the countries which took a part in the issue of the "League loans" ; it exists to protect the bondholders and to safeguard the special status of these loans.

The committee has worked throughout in contact with all the bodies mentioned, as well as with other representatives of the creditors of the countries in default. Its contact with the League of Nations has been particularly close ; and by a resolution of October 7, 1932, the League Council to a large extent associated itself with the Committee's standpoint.

The League Loans Committee (which is not, of course, a committee of the League of Nations) has throughout supported the policy of the League ; and in its negotiations with the debtor countries, which have taken place at frequent intervals, it has impressed on them that they would do well to follow League advice.

For the rest, in the words of the report, "it has seemed to the League Loans Committee that the method of periodically reviewing the situation in each of the debtor countries and of recommending on each occasion temporary adjustments, while maintaining intact the framework of the existing contracts, is the proper policy to follow pending the time when it may be possible to reconstruct the

finances and the debts of those countries on a more durable basis."

The second part of the report describes the situation of each of the League loans.

Danzig and Esthonia, which are given a place of honour at the beginning of this section, have met the service of their League loans in full without any interruption.

The service of the Austrian 1923 (League) Loan has been maintained so far in full, including provision for the June, 1933, coupon and amortisation for the whole year 1933. The trustees, however, have had to exhaust the whole of the reserve fund to do this.

There remain the guarantees of Great Britain, France, Italy, Czechoslovakia and the other guarantor Governments to fall back upon. Austria has several times recognised the right of the 1923 (League) Loan to priority over other Austrian loans.

Bulgaria transferred 50 per cent. of the service of her League loans from April to November, 1932, and since then has transferred 40 per cent. The trustees of the 7 per cent. Refugee Loan, 1926, have met the coupons in full so far by drawing on the reserve fund. The 7½ per cent. 1928 Loan has no reserve fund, and the trustees could only meet 50 per cent. of the coupons due November, 1932. (As announced on May 1, they are meeting 45 per cent. of the May, 1933, coupon.)

Greece went into complete default in April, 1932, but later, after conversations with the committee, met 30 per cent. of the interest on her two League loans for the fiscal year ended March 31, 1933. This meant that she paid 60 per cent. on the first half-yearly coupons due during the year. Considerable delays occurred in making this payment; it was made in London in January, but in New York not until April, 1933.

The Greek Government undertook to resume conversations in November, 1932, to discuss the possibility of further payments for the fiscal year 1932-33, but has not yet done so.

Hungary has several times recognised the claim of her League loan to special treatment. The trustees have so far met the coupons of this loan in full by drawing on their reserve fund. The Hungarian Government is transferring exchange to them in instalments with a view to meeting the August, 1933, coupon also in full.

Part III of the Report contains for reference a set of the documents published during the past year regarding the loans.

These include the memorials which the League loans committee addressed to the British Government and the League of Nations in July, 1932; the resolution which the League Council took on receiving the committee's memorial; and announcements by the debtor Governments, the trustees, the paying bankers and the committee itself, regarding the service of the various loans.

At the end of the report there is a set of tables and graphs giving statistical data regarding the League loans.

STATISTICAL INFORMATION

INDIA'S FOREIGN SEA-BORNE TRADE IN APRIL, 1933.

The trade returns of British India for the month of April, 1933, as compared with the preceding month showed decreases in the values of imports, exports and re-exports. The value of imports of private merchandise totalled Rs. 9,69 lakhs, a decrease of Rs. 1,19 lakhs, as compared with the preceding month. The exports of Indian produce and manufactures fell by Rs. 2,15 lakhs from Rs. 12,35 lakhs in March, 1933, to Rs. 10,20 lakhs in the month under report. Re-exports also recorded a decrease of Rs. 9 lakhs and amounted to Rs. 22 lakhs. The comparison of the trade figures for April, 1933, with those of the preceding month and the corresponding month of the preceding year, is set forth below:—

	Month of April, 1933.	Month of March, 1933.	Increase (+) or decrease (−) in April, 1933, as compared with March, 1933.	
	R (lakhs)	R (lakhs)	R (lakhs)	Per cent.
Imports ...	9,69	10,88	−1,19	−10.9
Exports ...	10,20	12,35	−2,15	−17.4
Re-exports ...	22	31	−9	−29.0

	Month of April, 1933.	Month of April, 1932.	Increase (+) or decrease (−) in April, 1933, as compared with April, 1932.	
	R (lakhs)	R (lakhs)	R (lakhs)	Per cent.
Imports ...	9,69	13,22	−3,53	−26.7
Exports ...	10,20	10,44	−24	−2.3
Re-exports ...	22	28	−6	−21.4

2. Treasure on private account including currency notes, showed a net export of Rs. 4,47 lakhs in April, 1933, as against Rs. 4,88 lakhs in the preceding month and Rs. 4,08 lakhs in April, 1932. The import and export figures of gold and silver during the month of April, 1933, compare as follows with the same month of the preceding year:—

	April, 1933.	April, 1932.	Increase (+) or decrease (−) in 1933 as compared with 1932.
	R (lakhs)	R (lakhs)	R (lakhs)
Gold imported ...	6	11	−5
,, exported ...	4,56	4,24	+32
Silver imported ...	7	10	−3
,, exported ...	4	5	−1

3. Measured by the statistics of merchandise and treasure, the total visible balance of trade in April, 1933, was Rs. 5,21 lakhs in favour of India as compared with Rs. 6,71 lakhs in March, 1933 and Rs. 1,62 lakhs in April, 1932. The balance of remittances of funds in April, 1933, was minus Rs. 1,11 lakhs.

Changes in Imports.

4. As compared with April, 1932, the imports of food, drink and tobacco in April, 1933, decreased by Rs. 8 lakhs to Rs. 97 lakhs, and those of raw materials by Rs. 2,32 lakhs to Rs. 1,32 lakhs, and manufactured articles by Rs. 1,18 lakhs to Rs. 7,18 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) increased from 26,000 tons valued at Rs. 31 lakhs to 33,000 tons valued at Rs. 34 lakhs. Imports of rice, not in the husk, fell from 500 tons valued at Rs. 54,000 to 10 tons valued at Rs. 1,600. Arrivals of wheat amounted to 2,000 tons valued at Rs. 1 1/3 lakhs as against nil in April, 1932. Under spices, the imports of betelnuts declined from 74,000 cwts. to 53,000 cwts. in quantity and from Rs. 8 lakhs to Rs. 5 lakhs in value. Imports of raw tobacco fell from 334,000 lbs. valued at Rs. 5 lakhs to 236,000 lbs. valued at Rs. 4 lakhs. The imports of cigarettes increased from 61,099 lbs. to 65,000 lbs. in quantity but the value remained unchanged at Rs. 2 lakhs. Imports of provisions and oilman's stores declined from Rs. 23 lakhs to Rs. 19 lakhs owing mainly to lesser arrivals of vegetable products and condensed milk. Under raw materials, the imports of kerosene oil fell from 8 million gallons valued at Rs. 44 lakhs to 2 million gallons valued at Rs. 6 lakhs. Imports of fuel oil rose from 6.4 million gallons to 8.8 million gallons in quantity and from Rs. 13 lakhs to Rs. 16 lakhs in value. Imports of lubricating oils declined from 1.5 million gallons valued at Rs. 15 lakhs to 1.3 million gallons valued at Rs. 12 lakhs. Imports of coconut oil contracted by 173,000 gallons to 397,000 gallons in quantity and by Rs. 3 lakhs to Rs. 4 lakhs in value. The imports of raw cotton, chiefly from the United States of America, Kenya Colony, Egypt and Anglo-Egyptian Sudan decreased by 20,000 tons in quantity and by Rs. 1,78 lakhs in value. Arrivals of precious stones and pearls unset chiefly diamonds recorded a decline of Rs. 3 lakhs. Imports of raw silk fell by 94,000 lbs. in quantity and by Rs. 6 lakhs in value. Under manufactured articles the imports of cotton yarn and manufactures decreased by Rs. 45 lakhs. The imports of twist and yarn fell from 4 million lbs. to 2 million lbs. in quantity and from Rs. 38 lakhs to Rs. 19 lakhs in value. The imports of cotton piecegoods showed decreases under all the sub-divisions except in the case of white which recorded an improvement in quantity. Imports of grey goods amounted to 27 million yards valued at Rs. 36½ lakhs as compared with 28 million yards valued at Rs. 44 lakhs in April, 1932; those of white and coloured goods totalled 35 and 26 million yards valued at Rs. 61 lakhs and Rs. 54 lakhs as against 31 and 31 million yards valued at Rs. 62 lakhs and Rs. 68 lakhs, respectively, a year ago. Under iron and steel there was a decrease of Rs. 15 lakhs of which sheets and plates accounted for Rs. 10 lakhs. The imports of machinery and millwork, including belting, declined by Rs. 10 lakhs. The imports of motor cars in April, 1933, numbered 608 and those of motor lorries, buses and vans 441. The value of the motor cars imported in April, 1933, rose by Rs. 7 lakhs as compared with April, 1932. The imports of dyes obtained from coal tar fell by 1.1 million lbs. in quantity and by Rs. 15 lakhs in value. There was noticeable increase under piecegoods of cotton and artificial silk (+Rs. 2 lakhs) while there were decreases under paper pasteboard and stationary (−Rs. 7 lakhs) and copper wrought (−Rs. 5 lakhs).

Variations in Exports.

5. Exports of food, drink and tobacco in April, 1933, compared with April, 1932 fell by Rs. 1,00 lakhs to Rs. 2,18 lakhs. Shipments of rice not in the husk, declined in quantity from 231,000 tons to 205,000 tons and in value from Rs. 2,01 lakhs to Rs. 1,22 lakhs. The exports of tea rose from 5.5 million lbs. valued at Rs. 41 lakhs to 6.7 million lbs. valued at Rs. 46 lakhs. Exports of coffee declined from 41,000 cwts. valued at Rs. 26 lakhs to 24,000 cwts. valued at Rs. 14 lakhs. Raw materials and produce exported rose by Rs. 1,19 lakhs to Rs. 5,19 lakhs. Under this group, raw cotton recorded an improvement of 35,000 tons in quantity and of Rs. 1,90 lakhs in value. Of the total shipments of 51,800 tons, Japan took 28,300 tons or 55 per cent., China 5,800 tons, or 11 per cent., United Kingdom 4,600 tons, France 4,000 tons, Germany and Italy 2,800 tons each and Belgium 1,500 tons, the remainder being despatched mainly to Spain and the Netherlands Despatches of raw jute improved from 34,000 tons to 42,000 tons in quantity but the value declined from Rs. 66 lakhs to Rs. 61 lakhs. Exports of lac improved by 14,000 cwts. to 42,000 cwts. in quantity but the value showed no variation and remained unchanged at Rs. 11 lakhs. Shipments of oilseeds receded from 72,000 tons valued at Rs. 1,19 lakhs to 49,000 tons valued at Rs. 61 lakhs. Castor seed recorded a decrease of 8,000 tons in quantity and of Rs. 15 lakhs in value. Groundnut also fell from 29,000 tons valued at Rs. 57 lakhs to 19,000 tons valued at Rs. 27 lakhs. Rapeseed declined by 12,500 tons in quantity and by Rs. 19 lakhs in value. Exports of linseed however improved from 7,000 tons to 10,000 tons in quantity and from Rs. 8½ lakhs to Rs. 11 lakhs in value. Exports of raw hides and skins rose by 500 tons in quantity and by Rs. 6 lakhs in value. Exports of manganese ore rose by 3,000 tons to 26,000 tons in quantity but the value remained practically stationary at Rs. 6 lakhs. Shipments of raw wool rose from 2.0 million lbs. to 2.6 million lbs. in quantity but the value declined from Rs. 12 lakhs to Rs. 9 lakhs. Manufactured goods declined by 43 lakhs to Rs. 2,68 lakhs. The number of jute bags shipped contracted from 31 millions in April, 1932, to 28 millions in April, 1933, and from Rs. 85 lakhs to Rs. 64 lakhs in value. The yardage of gunny cloth exported increased from 66 millions to 81 millions and from Rs. 68 lakhs to Rs. 78 lakhs in value. Exports of tanned hides and skins fell by 300 tons in quantity and by Rs. 19 lakhs in value. Exports of cotton manufactures fell off by Rs. 6 lakhs. The exports of paraffin wax also recorded a decline of Rs. 2½ lakhs.

Trade with Foreign Countries.

6. The share of the United Kingdom in the imports rose from 34 per cent. in April, 1932, to 44 per cent. in April, 1933, and that in the exports from 21 per cent. to 22 per cent. The shares of Germany, Japan and the United States in the month under report were 7, 15 and 7 per cent., respectively, under imports, and 7, 17 and 7 per cent. under exports.

Movements of shipping.

7. The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions during the month of April, 1933, amounted respectively to 546,000 and 559,000 as against 605,000 and 754,000 in March, 1933, and 542,000 and 646,000 a year ago.

COMPANY REPORTS

RANEEGUNGE COAL ASSOCIATION, LD.

Synopsis of Balance Sheet:

		Cash & Invests. ...	6,93,866
Total ...	37,26,091	Total ...	37,26,091

Extracts from Directors' Report:

Report for the half-year ended 31st March, 1933.

The gross profit transferred to Profit and Loss Account is Rs. 2,62,265-9-7.

After providing for current Depreciation, Cesses, Income and Super Tax, Commissions, and usual Bonus to staff, in all absorbing Rs. 1,30,548-3-6, there remains at credit of Profit and Loss Account after taking into account the balance brought forward from the last account the sum of Rs. 1,39,914-8-8, out of which we recommend that a dividend be paid of Re. 1 per share, equivalent to a rate of 20 per cent. per annum. This will dispose of Rs. 1,20,000, leaving a balance of Rs. 19,914-8-8 to be carried forward.

The possibility was indicated in our last Report of the question of price for 1932-33 having to be referred to arbitration and recently, as all negotiations had failed, we referred the matter to the Bengal Chamber of Commerce for arbitration. The Tata Iron & Steel Co., Ld., however, have now filed a suit in the Bombay High Court so that the arbitration proceedings are held up until the question has been settled whether the dispute is to be decided by the Court or by arbitrators. This question is now being brought before the Court for decision.

Pending a settlement of the question of the price, we have transferred to a Special Reserve Account the sum of Rs. 1,36,692-1-3 representing the difference between the price claimed by the Association and the price at which our bills are being paid by the Steel Company.

Raisings, Despatches and Stocks are as follows:—

	Half-year euding 31st March, 1332 Tons.	Half-year ending 30th Sept., 1932 Tons.	Half-year ending 31st March, 1933. Tons.
Raisings ...	277,967	268,247	267,377
Despatches ...	280,357	273,443	270,198
Stocks ...	18,468	13,273	10,452

CENTRAL TRAVANCORE RUBBER CO., LD.

Loss for 1932 before charging depreciation, £2,372 (against £3,405 for 1931), which includes the cost of maintainging the rubber area. This loss reduces the sum carried forward to £1,370. The directors have withdrawn £5,000 from reserve and applied it in writing down building and machinery account by £2,000 and planting and development account by £3,000. Stores, debtors, and stocks total £7,938, against creditors, etc., for £1,911. The tea crop harvested was 430.854 lb. (against 323,776 lb.) and the average price realized was 6.78 per lb. (against 7.87d.).

DUNLOP RUBBER CO., LD.

After providing £561,000 for depreciation and obsolescence the Company earned a working profit last year of £1,542,000, compared with £1,181,000 for 1931. The forecast of better earnings made a year ago by the chairman has thus been handsomely fulfilled. After the dividends on Guaranteed Preference shares in subsidiary companies have been deducted there remains £1,232,000. Interest on Debenture stock, etc., absorbs £370,000, leaving a balance on profit and loss account of £862,000, compared with £480,029. Taxation reserve requires £293,000, against £374,943, and the directors have declared final dividends on all classes of Preference shares (their requirements for the full year amounting to £281,000) and a dividend of 4 per cent. on the Ordinary shares, which will absorb £239,000. The "carry forward" is raised from £392,000 to £444,000. For the preceding year nothing was earned or paid on the Ordinary capital, and in consequence of the heavy amount absorbed by income-tax requirements a large part of the year's Preference dividends was paid out of the surplus brought in from 1930.

BURMAH OIL CO., LD.

The directors announce that after allowing for income-tax and all charges and setting aside £397,500 (against £637,173) for depreciation, the profit for 1932 amounted to £1,524,635 (against £1,869,495 for 1931). A final dividend of 15 per cent., less tax, is recommended (against 12½ per cent.), making 20 per cent. for the year (against 17½ per cent.), and £200,000 (against £300,000) is to be placed to general reserve, while a transfer of £20,000 is again to be made to the insurance reserve. A balance of £485,511 is carried forward (against £586,046). Last year £350,000 was added to taxation reserve.

SWEDISH BALL BEARING CO., LD.

It was inevitable that the activities of the Company should be curtailed last year by the depression in world markets. The company, however, in spite of a drop in net profit from 12,481,000 kr. to 10,033,000 kr., is again able to pay a dividend of 7 per cent. Formed in 1907, this company, generally known as "S.K.F.," represents the world's largest group of manufacturers of ball and roller bearings, and together with its subsidiaries supplies over one-third of the world's markets. The company owns or controls through subsidiary companies factories in Sweden, the United States, Great Britain, France, Germany, and Ozechoslovakia, and has sales organizations in practically every country in the world.

The average dividend derived from the company's, shareholdings last year was 3.87 per cent. on the book value of these holdings. This compares with 4.05 per cent. Dividends were paid by the English, French, and American companies; the latter dividend, however, was derived entirely from accumulated surplus. Examination of the consolidated balance-sheet shows an increase in the liquid position. Against current liabilities of 38,206,000 kr., the group held on 31st December, floating assets amounting to 159,086,000 kr. The total available surplus showed a reduction (after charging the year's dividends) of about 4,000,000 kr.—to 25,361,000 kr.; this is due to the fact that the American company, although paying dividends, incurred an operating loss of $925,916 for the year.

DELHI ELECTRIC SUPPLY AND TRACTION CO., LD.

The annual report for 1932 shows, including sundry revenue, a net balance, after deducting administration charges in London and Delhi, of £44,494, as against £48,346. Adding £21,052 brought in makes a total of £65,996.

Appropriation of £8,000 (against £8,461) to depreciation and renewals reserve, £9,900 (8,000) to tax provision and £3,463 (9,299) to general reserve leaves £44,633. A final dividend of 8 per cent., free of tax, is recommended, again making 12 per cent. net for the year, and £20,633 is carried forward.

The net additions to plant during the year amounted to £7,684.

JAMES FINLAY & CO., LD.

The accounts for 1932 of James Finlay and Co., show a profit of £149,368, compared with £156,654 for 1931. Their principal interests are in Ceylon and India, where it has large holdings in jute and cotton mills, and in companies growing tea and rubber. The directors recommend a final dividend on the Ordinary of 5 per cent., less tax. This makes, with the interim distribution, a total of 9 per cent., the same rate as for the previous year.

After providing for Preference and Ordinary dividends, £258,391 will be carried forward, compared with £274,023. The final Ordinary dividend will be payable on 30th June.

SOUTH INDIAN RAILWAY CO., LD.

The directors have decided to pay on 1st July, an interim dividend from surplus profits of 2 per cent. (the same as last year), making with the interest guaranteed for the half-year ending 30th June, 1933—namely, 1¾ per cent.—a total distribution for the half year of 3¾ per cent.

NEW SYLHET TEA ESTATES, LD.

The Estates harvested a crop of 748,688 lb. in 1932 (against 681,336 lb. in 1931). The gross average price realized was equivalent to 7.57d. per lb. London. The accounts show a net loss of £371 (against £4,386), which has been covered by transferring £205 from income-tax account, and £166 from general reserve. It is proposed to pay the Preference dividend for the year from the dividend reserve. Floating assets, £27,859; current liabilities, £2,065.

GANGES MANUFACTURING CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets		Rs.
Capital	...	90,32,100	Block (nett)	...	1,06,28,203
Reserve	...	13,00,000	Jute, Cloth & Bags		64,58,801
Debts	...	76,65,897	Stores	...	2,61,276
Profit & Loss	...	57,219	Outstandings	...	4,38,497
			Investments	...	15,000
			Cash & Deposits	...	2,53,439
Total		1,80,55,216	Total		1,80,55,216

Extracts from Directors' Report:

The Directors submit the Audited Accounts for the six months ended 31st March, 1933, which show a sum of Rs. 57,218-7-8 at credit of Profit and Loss Account. The Directors recommend that this sum be dealt with as follows:—Payment of Preference Dividend for the half-year ended 31st March, 1933, at 8 per cent. per annum (free of Income Tax) Rs. 24,000, carry forward Rs. 33,218-7-8, total Rs. 57,218-7-8.

Short Time Working.—In accordance with the agreement entered into by all the members of the Indian Jute Mills Association the Mills continued to work 40 hours weekly with 15 per cent. of the total looms shut down.—

MALAKOFF RUBBER ESTATES, LD.

Loss for 1932, £1,146 (against £4,160 for 1931), from which has been deducted £702 income-tax reserve not now required. The balance of the loss reduces the sum carried forward from £4,130 to £3,686. Floating assets, £9,638; current liabilities, £4,604. The crop harvested for the year was 1,817,242 lb. (against 1,797,880 lb.).

CONSOLIDATED MALAY RUBBER ESTATES, LD.

The Estates report a loss for 1932, of £2,142 (against £3,124 for 1931). This loss has been eliminated by transferring £2,000 from income-tax reserve and reducing the balance carried forward from £246 to £104. Floating assets, £33,668; current liabilities, £2,996. The crop harvested was 1,076,550 lb. (against 1,122,400 lb.), and the average gross price realized was equivalent to 2.52d. per lb., landed London (against 3.12d.).

RANI TRAVANCORE RUBBER CO., LD.

Loss for 1932, after crediting £3,014 for profit on realization of securities is £3,583 (against aprofit of £1,964 for 1931, after transferring £8,638 form taxation reserve). The directors have taken £2,000 from reserve and a credit of £2,335 was brought forward, these items extinguishing the loss and giving a credit of £752 to be carried forward. Floating assets, £42,253, against current liabilities of only £539. Tapping ceased on 30th June, 1932.

DARJEELING CO., LD.

The Company harvested 806,905 ib. of tea in 1932 (against 788,686 ib. in 1931). The average price obtained for the crop was 1s. 1.64d. per ib. (against 1s. 6.30d.). A profit of £3,930 is shown by the accounts (against £13,685), out of which the directors propose to pay a dividend of 2½ per cent. (against 10 per cent.). A transfer of £1,000 is to be made to estates improvement fund and £3,856t is to be carried forward (against £4,312 brought into the accounts). Floating assets, £79,621; current liabilities £11,582.

SIEMENS BROTHERS & CO., LD.

In their report for 1932 the directors state that the volume of work passing through the shops during the year was substantially greater than in 1931, and the wages bill was higher, but owing to keen competition and the fall in prices the monetary value of the turnover showed a considerable reduction. The net profit for the year amounted to £224,011, compared with £243,469 for 1931. As already announced, a final dividend of 4 per cent. is recommended on the Ordinary shares, making 6½ per cent. for the year (against 7½ per cent.). The balance forward is increased by £9,761 to £381,916. The balance-sheet shows a large surplus of floating assets over current liabilities, the former totalling £2,038,826 (excluding interests in subsidiaries) and the latter £447,982.

TITAGHUR PAPER MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.

			Cash & Deposits	...	1,41,249
Total	...	76,48,882	Total	...	76,48,882

Extracts from Directors' Report:

Accounts for the half-year ended 31st March, 1933, after allowing for Debenture and General Interest, Commissions and Taxation, show a profit of Rs. 5,20,172-8-11. There was been set aside for depreciation the sum of Rs. 2,69,336-6, whilst Rs. 10,000 has been transferred to Indian Workers' Pension Fund Account and Rs. 30,000 to Debenture Redemption Fund Account. The balance remaining at the cridit of Profit and Loss Account, after giving effect to these adjustments and tranfers, amounts to Rs. 2,10,836-2-11.

The following is a statement showing how the above balance has been allotted to the respective Dividend Accounts in accordance with Clause 3-A, Section 2, Sub-Section (*a*) of the Company's Articles of Association:—Balance available Rs. 2,10,836-2-11; Preference Dividend 8 per cent. per annum Rs. 46,000, Ordinary Dividend 10 per cent. per annum Rs. 21,875, total Rs. 67,875, balance Rs. 1,42,961-2-11; transfer Half Share of Surplus Profits to Ordinary Shareholders Dividend Account Rs. 71,480-9-6, tranfer balance Half Share of Surplus Profits to Deferred Shareholders Dividend Account Rs. 71,480-9-5, total Rs. 1,42,961-2-11.

The division of the profits for the half-year ended 31st March, 1933, is therefore as follows:—Preference Shareholders Dividend Account Rs. 46,000, Ordinary Shareholders Dividend Account Rs. 93,355-9-6, Deferred Shareholders Dividend Account Rs. 71,480-9-5, total Rs. 2,10,836-2-11.

In accordance with the terms of issue of the Deferred Shares there is no balance brought forward or carried forward in the main Profit and Loss Account. The balance due to each class of share is shown in the respective Shareholders Dividend Accounts in the Balance Sheet.

The Directors propose that the balance at the credit of the respective Dividend Accounts be disposed of as follows:—Preference Shareholders Dividend Account—Amount allotted as above Rs. 46,000, in paying a dividend on the Preference Shares at the rate of 8 per cent. per annum, free of Income Tax Rs. 46,000. Ordinary Shareholders Dividend Account—Balance brought forward Rs. 6,889-5-11, amount allotted as above Rs. 93,355-9-6, total Rs. 1,00,244-15-5; in paying a dividend on the Ordinary Shares at the rate of six annas per share, free of Income Tax Rs. 65,625, in paying a bonus on the Ordinary Shares at the rate of three annas per share, free of Income Tax Rs. 32,812-8, in carrying forward Rs. 1,807-7-5, total Rs. 1,00,244-15-5. Deferred Shareholders Dividend Account—Balance brought forward Rs. 2,760-5-8, amount alloted as above Rs. 71,480-9-5, total Rs. 74,240-15-1; in paying a dividend at the rate of three annas six pies per share, free of Income Tax, on 318,455 Deferred Shares which rank for dividend as from the 1st October, 1932, Rs. 69,662-0-6, in carrying forward Rs. 4,578-14-7, total Rs. 74,240-15-1.

Working results may agxain be considered satisfactory although various difficulties were experienced during the half-year. Production was slightly lower than the previous half-year. The dividend recommended is equal to 11¼ per cent. per annum on the value of the Ordinary Shares prior to the reduction of Capital.

Notwithstanding severe competition from abroad, the order position was maintained. Prices, however, have continued to show a lower tendency and many large buyers, including Government, have curtailed their annual demands.

At No. 2 Mill, Kankinara, good progress has been made with the erection and operation of new bamboo preparatory machinery and chemical plant, necessary for the production of larger quantities of bamboo pulp.

The Third Issue of 6 per cent. Debentures were repaid as at 31st December, 1932.

DIMAKUSI TEA CO., LD.

Synopsis of Balance Sheet:

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Crop and Sales.—The following are comparative statistics of outturn and sales for the past three years:—

Year.	Crop.	Sale Average.
1932	488,824 lbs.	Re. -/7/10 per lb.
1931	423,337 ,,	,, -/11/8½ ,, ,,
1930	407,764 ,,	,, -/12/9½ ,, ,,

Season's Working.—From the undernoted it will be observed the working of the Company for the period under review resulted in a profit of Rs. 31,210-6-7, receipts Rs. 2,44,679-11-5, expenditure Rs. 2,10,001-7-10, surplus Rs. 34,678-3-7, less—Commission to Manager and Managing Agents Rs. 3,467-13-0, profit Rs. 31,210-6-7.

Profit and Loss Account.—After adjustment and making the following transfers:—Written off Machinery Rs. 8,871-0-6, Written off Advances Rs. 477-12-0, this account shows a balance at credit of Rs. 23,777-4-4, which it is proposed to deal with as follows:—To payment of a Cumulative Preference Dividend of 8 per cent. (free of income-tax) for season 1932 Rs. 5,608-0-0, to payment of a Dividend of 7½ per cent. on Ordinary Shares for season 1932 (free of income-tax) Rs. 16,752-8-0, to carry forward Rs. 1,416-12-4, total Rs. 23,777-4-4.

Season—1933.—Assuming the scheme of regulation of exports and restriction of crop is agreed to, the estimates for 1933 provide for a crop of 400,000 lbs. tea at a cost of Rs. 1,71,700.

STANDARD TEA OF CEYLON CO., LD.

Profit for 1932, £35,450 (against £53,738 for 1931). A final dividend of 15 per cent. is proposed making 20 per cent. for the year (against 30 per cent.), while £7,500 (against nil) is to be used to write down the value of the rubber estate and £4,500 (against £8,000) is placed to income-tax reserve. The balance forward will then show little change at £35,439 (against £35,789). The tea crop rose from 1,674,769 lb. to 1,868,192 lb., but the net sale price fell from 19.46d. to 14.63d. a lb. The rubber trees were tapped for one month only. Floating assets, £111,000; current liabilities, £42,000.

MANIPUR TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	4,20,000	Block	...	4,22,654
Debts	...	46,807	Crop A/c.	...	18,592
			Outlay	...	3,377
			Outstandings	...	2,211
			Cash	...	2,830
			Profit & Loss	...	17,143
Total	...	4,66,807	Total	...	4,66,807

Extracts from Director's Report:

Report for the year 1932.

Area.—An extension of 46.50 acres was put out and at 31st December the area under tea was 546.50 acres

A 10-acre block of Seed area has been abandoned since and the area under tea is therefore reduced to 536.50 acres.

Cultivation.—The garden was kept in a good state of cultivation.

Crop.—A crop of nearly 933 maunds was realised which compared with 748 maunds made in 1931. The market continued extremely unfavourable and the average price realised was annas 5-8 per lb. as compared with annas 5 per lb. in 1931. A portion of the crop was disposed of privately in India and abroad.

Seed Crop.—An order was registered for 3 maunds only, and 17 maunds were distributed free of cost as an advertisement. A total quantity of 20 maunds only therefore was collected.

Labour.—The resident labour force at the garden is adequate for all requirements and the position at 31st December was 1,026 hands. The average at work including villagers was 526 against 648 in 1931.

Accounts.—The total expenditure for the season amounted to Rs. 82,202-8-5 including Sale Charges and the result of the season's working is a loss on Revenue Account of Rs. 54,479-7-3 which is transferred to Profit and Loss Account. This sum with the adverse balance of Rs. 2,31,743-1-7 brought forward from 1931, and Rs. 919-15 added for contribution to the Employees' Provident Fund brings the total at debit of Profit and Loss Account to Rs. 2,87,142-7-10. The sum of Rs. 2,70,000 at credit of Reserve Account has been appropriated to Profit and Loss Account which now shows a debit balance of Rs. 17,142-7-10 which is carried forward.

Season 1933.—The Industry has adopted voluntarily a Scheme of Restriction but in view of the flood of 1929 representations have been made for special treatment excluding the Company from the operation of the Scheme and the result is anxiously awaited. The estimate will be prepared accordingly.

TONGANI TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	3,00,000	Block	...	3,21,317
Debentures	..	45,000	Crop A/c	...	44,065
Other Debts	...	76,910	Outlay	...	4,961
			Outstandings	...	2,866
			Cash	...	4,252
			Profit & Loss	...	44,449
Total	...	4,21,910	Total	..	4,21,910

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

Crop and Sales.—The Shareholders have been advised by the circulars issued during the season of the effects of the unfavourable climatic conditions which were experienced, and the unsatisfactory prices realised for the Company's produce. An improvement in the market took place after the turn of the year and as the outlook appeared more favourable, the Managing Agents consented to provide finance to carry on the Company for another season. The necessary steps have been taken and an order has now been obtained from the Court staying the liquidation proceedings.

Comparative statistics of outturn and sales for the past three years, are under:—

Year.	Crop.	Sale Average.
1932 ...	184,042 lbs. ...	Re. -/5/8¼ per lb.
1931 ...	175,224 ,, ...	,, -/5/9 ,, ,,
1930 ...	196,201 ,, ...	,, -/8/2½ ,, ,,

Season's Working.—The working of the Company for the period under review resulted in a loss of Rs. 18,869-2-3; receipts Rs. 65,636-8-1; Expenditure Rs. 84,505-10-4; loss Rs. 18,869-2-3.

Profit and Loss Account.—After adjustment and transferring the above, loss this Account shows a balance at debit of Rs. 44,448-7-8, which is carried forward.

Estimates—1933.—On the assumption that the schemes for the restriction of crop are agreed to, the estimates for 1933 provide for a crop of 168,000 lbs. at a cost of Rs. 69,550.

GANGES ROPE CO., LD.

Synopsis of Balance Sheet:

WORLD OF INDIAN FINANCE

Friday, June, 9.

The money market has witnessed somewhat curious, and even inexplicable, changes. In the early part of the week, credits were distinctly usable. Rates for interbank call money went up to 2 per cent. But, borrowers, as a rule, were quite cautious in bidding for funds; and there was a marked reluctance to pay a fraction more than was absolutely necessary. It was not the lack of demand, so much as this reserved attitude of borrowers, that was responsible for interbank rate remaining below 2 per cent. Bankers were convinced that there was no special reason why money should be dear and did not want to put themselves in the position in which, after they had taken money, they might realise that they had paid too dear a rate. While it is difficult to explain the passing phase of steady money conditions, it is possible to offer some manner of explanation for the easier rates prevalent in the latter half of the week On the weekly sterling tender day applications amounted to £2.35 millions at 1s. 6 1/16d. Allotments were on the basis of 42 per cent. This means that the market should have had an inflow of funds to the amount of Rs. 1 1/3 crores on Thursday. The payments on Friday of Rs. 1 crore in respect of Treasury Bills allotted on Tuesday did not have more than the usual effect on the market.

At the moment, a matter for considerable speculation in banking circles is the future of the Treasury Bills policy of the Government. The first indication of such a policy is afforded by the increase in the weekly offer from Rs. 1 crore to Rs. 1½ crores as from June 16. But the only type of Treasuries that will continue to be available is three months Bills. There is as yet no indication of the introduction of six months or nine months Bills. The market is fully hoping that six months Bills should shortly be made available. It has almost taken a liking in advance for six months Treasuries. The reason is obvious. The yield on three months Bills, after a slight rise till three weeks ago, has again tended to grow lower and lower. Though applications on June 6, were only Rs. 1.41 crores, the average rate of accepted tenders was pushed down to Rs. 1-2-5. Judging from the total applications, one would think that there was not much competition for these Bills. Judging from the average discount rate, which compares with Rs. 1-3-11 but a few weeks ago, it is obvious that there has been quite a keen bidding amongst the competitors, few as they were. The yield on the present basis of discount is barely 1.125; and bankers are eagerly looking forward to something more substantial than these anaemic rates which have been their lot for quite a long spell. It is generally believed that the introduction of six months Bills would afford an opportunity for a more substantial yield. It would, on the one hand, satisfy the greed of bankers, if they could get something much better than they have been used to heretofore. Nor would it be unsuitable to the plans of the Treasury if it could get, though on a higher rate, six months rather than three months accommodation.

While no doubt is entertained as to the inevitability of six months Bills in the near future, the market is quite prepared to put up with the present suspense. The Controller of the Currency has been, for some time, in Simla, engaged in important conversations with the Finance Department over the operations in the immediate and near future. Any change in the policy or operations should, naturally, await his return after such consultation. It has also been rather abruptly decided that Sir George Schuster is to take the next boat available for London to attend the Reserve Bank discussions and the World Economic Conference. The Hon'ble Mr. A. H. Lloyd is to officiate during his absence and till the return from leave of Sir Alan Parsons. As this arrangement would be of a stop-gap nature, the Acting Finance Member would rather not be bothered about any serious questions such as are involved in changes of policy as regards short-term borrowings. Now that the Controller of the Currency is in Simla, and he has had ample opportunities of discussion with Sir George before he leaves, and the Hon'ble Mr. Lloyd before he enters office, it may be assumed that decisions on the most outstanding questions will be arrived at in the current week. We, therefore, expect that in a week or a fortnight, the Controller of the Currency will be introducing six months Treasury Bills and will, at the same time, indicate whether the needed resources are to be gathered by increased weekly offer or by supplementing from intermediate Treasury Bills.

At the present moment, there is hardly any foreign money in the total of outstanding Treasury Bills. The entire floating debt may be said to be more or less made up of local resources of banks, investment institutions and investors. This has a very interesting side effect on sterling purchases. It will be remembered that in 1932-33 there were practically no purchases of sterling by the Government in the first four months. On the other hand, in the current year, the remittances effected in the ten weeks of this fiscal year amounted to no less than £9½ millions. Inclusive of the gold exports, the favourable balance in the current year could not at all be better than was the case in the last year. How is it, then, that the same favourable balance has resulted in sterling purchases in 1933-34 and could yield no sterling purchases in 1932-33? This is a very interesting question, for a deeper understanding of which it is necessary to study the trade figures of last year in some detail in relation to Treasury Bills statistics. Exports in 1932-33 inclusive of re-exports, came to Rs. 136 crores against Rs. 160 crores in 1931-32 and Rs. 226 crores in 1930-31. While exports were thus considerable lower, imports, however, showed an improvement in 1932-33 as against 1931-32. Imports came to Rs. 132 crores in 1932-33 as compared with Rs. 126 crores in 1931-32 and Rs. 164 crores in 1930-31. The balance of trade was a bare Rs. 3 crores in 1932-33 as against Rs. 35 crores in 1931-32 and Rs. 62 crores in 1930-31. A favourable balance of Rs. 3 crores on merchandise account is a matter of the gravest concern; and to understand its serious purport, one has merely to add that taking a number of years either in the pre-War period or post-War period, the average favourable balance in merchandise would be between Rs. 70 crores to Rs. 80 crores. Gold, however, comes to the rescue, the exports of which amounted to Rs. 65 crores. Taking merchandise and treasure together the total balance of trade was Rs. 68 crores. Against this, the Government were able to buy sterling for £36 million. We reckon that the average rate at which sterling purchases should have been effected should work out to about 1s. 6 1/8d. This means that the Rupee payments against the sterling purchases would have been about Rs. 48 crores, or slightly under. It follows that of the Rs. 68 crores, which is the favourable balance, Rs. 48 crores was availed of by the Government for their sterling purchases.

What has happened to the balance? The balance? The balance has, presumably, been eaten up by the so-called invisible items. Amongst these invisible items, the most important should have been the tranference of short-term capital connected with the recall of London funds invested in Rupee Treasury Bills. Between the beginning and the end of the last financial year, the Treasury Bills outstandings with the public should have come down by about Rs. 25 crores. Most of this reduction has meant that, whatever funds on account of London were invested in India were returned owing to the unremunerative rates forthcoming on rupee Treasury Bills. It may, therefore, be said that of the Rs. 20 crores taken up by the invisible items from out of the favourable balance, a good part is accounted for by the flight of funds from India on account of the unattractiveness of rupee short-term Bills. At the commencement of the new financial year, the position was that there was practically no foreign money involved in India's floating debt. So the havoc caused on our favourable balance by short-term movements of capital is non-existant in the conditions obtaining in this year. Therefore, whatever balance of trade materialises, most of it is available to the Treasury in the form of sterling purchases.

But let it not be forgotten that this balance of trade is caused not by merchandise but by gold exports. So long as our authorities are able to keep the India Office satisfied about its requirements, they believe that there is no other anxiety about which they should feel seriously concerned. But we do urge that the persistence of such a phenomenally low favourable balance on merchandise account, month after month, is so serious that unless steps are taken in time, the Government would find themselves in desperate condition when the day of reckoning comes after the cessation of gold exports. To put faith in gold and sleep in peace that all is well with India is bad finance.

Exchange was extremely lifeless without any business being done. There were, however, small sellers at 1s. 6 5/64d.

The closing rates are: 1s. 6 1/32d., October T.T. and 1s. 6d. November-January T.T.

Bills may be quoted: 1s. 6 1/8d., right up to the end of the year.

Money was tight in the early part of the week but eased off towards the close. Union rates were ¾ per cent. for call, three day's notice and seven day's notice. Onemonth, twomonth and threemonth deposits quoted 1, 1¼ and 1½ per cent. respectively.

OTHER INDIAN MONEY MARKETS

(*By Wire*).

Bombay, June 9.

Money continued easier throughout the week, interbank call being nominally quoted 1 per cent. This cheapness of money has been reflected in the lower average rate of interest on Treasury Bills allotted this week.

Rupee sterling exchange has been steady throughout the week, banks quoting to sell T.T. at 1s. 6 1/32d. June to October; 1s. 6d. November-January; 1s. 5 31/32d. February; and 1s. 5 15/16d. March.

Karachi, June 8.

Notwithstanding indications suggested by the ample applications for sterling tenders, exchange is quiet. For ready T.T. buyers ask for 1s. 6 5/64d. and sellers quote 1s. 6 3/64d. Small business has been done at 1s. 6 1/16d. Three months bills are quoted at 1s. 6⅛d.

In forward positions, business has been done for September-December combined at 1s. 6 1/32d. There are sellers for next year January-March in equal monthly amounts of 1s. 6d.

Demand for money has been fluctuating in accordance with the intensity of the movement of crops to the port and requirements of cotton, and grain clearings.

Last Friday, no lenders for call even at 4 per cent. were found. Yesterday, borrowers paid up to 3½ per cent. To-day there is appreciable ease and short credits are available at 1½ per cent.

FINANCE ABROAD.

Dr. Schacht has apparently completed his task of setting the stage for a moratorium. Before he left Berlin for Washington, to confer with President Roosevelt on the questions affecting the World Economic Conference, he had made up his mind to declare a moratorium on Germany's foreign debts, both short and long term. But he was also determined that in any action that he might take in this regard he should get the consent and support of the parties concerned. To this end, the President republished the estimates of Germany's balance of payments during 1933 and invited all the holders of German foreign bonds through the central banks of their respective countries to a conference with the Reichsbank. Though press reports have been inexplicably silent about the details, the meeting should have been held on May 22. Presumably, the foreign creditors should have, as was mentioned, in the Overseas columns of *Indian Finance* last week, questioned the accuracy of the estimates made by German experts for the guidance of this year's Standstill Committee. But it is obvious that even with a wide margin of error in their favour on the part of the German experts, the need for a temporary moratorium would be unquestionable; and with some measure of concurrence from the representatives of the leading central banks, Dr. Schacht should have felt emboldened to declare the moratorium. A press report appearing during the week points out that the total debt involved is estimated at 20,000 million marks of which the service charges totalling £65 million fell due in the current year. The United States is the biggest creditor with a total of 8,600,000 marks, Holland 3,427,000, and then Britain with 2,321,000. The shrinkage in Germany's favourable balance of payments has made it clear that the continued discharge of Germany's foreign obligations might entail the reduction of the reserve ratio of the Reichsbank to a dangerously low level.

The Reichsbank's Reserve Ratio.

In the statement issued by Dr. Schacht during the week it was pointed out that the Reichsbank note cover to-day is only 8.3 per cent. compared to the legal minimum of 40 per cent. The present rate is the result of a decline which has persisted over a long period. According to the returns of the Reichsbank as on May 23 last, the gold holding was down by 12,676,000 Rmks. (about £620,000 at par) at Rmks. 372,348,000 (about £18,200,000), while the foreign exchange holding is down by Rmks. 1,104,000 (about £49,500) at Rmks. 86,544,000 (£4,230,000). The total reserve cover thus amounts to Rmks. 458,892,000 (about £22,400,000) but, of this, about $45,000,000 (about Rmks. 189,000,000) is earmarked against foreign gold obligations.

The note circulation is down by Rmks. 90,910,000 (£4,450,000) so that the decline in the reserve ratio is small. The official statement now shows only the "true" cover, that is, after deducting foreign liabilities from the actual reserve. This proportion is 8.3 per cent. against 8.5 per cent. in the previous return and a normal legal minimumm of 40 per cent. The arithmetical cover shown by the present reserve is about 14.1 per cent. against 14.2 per cent. on May 15.

American Opposition.

In such a position it is difficult to withstand Germany's appeal for acquiesence in some sort of moratorium. The reasonableness of Dr. Schacht's demand may be seen as well in his anxiety to discuss the matter with the foreign bond holders before taking any definite action as in his offer to let the Dawes and Young payments remain unaffected by the moratorium. So far it has not been made clear to what extent the President was successful in enlisting the support of the parties affected. Special reference has,

1677

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

LLOYDS BANK
LIMITED.

(Incorporated in England.)

Subscribed Capital £73,302,076
Paid-up Capital £15,810,252
Reserve Fund £ 8,000,000

Head Office: LONDON, E. C. 3.

Over 1,900 BRANCHES IN ENGLAND AND WALES.

Branches in the East:

however, to be made of America's representatives at the bankers' conference who, it is reported, have made it clear that, in the event of Dr. Schacht declaring a moratorium, American bond holders are prepared to seize any property in America of German firms whose bonds are in default. To the extent that the decision of Dr. Schacht has been opposed by her creditors, the prospects of goodwill and cordiality in the World Economic Conference are lamentably prejudiced.

Cabinet Meeting on War Debts.

With the approach of the date fixed for the World Economic Conference there approaches also, unfortunately enough, the due date for the next instalment of war debt payments. In spite of the numerous conferences between the representatives of America and the creditor powers, the uncertainty rgarding the attitude of the parties concerned has not been minimised. In America, President Roosevelt still fights shy of approaching Congress for authority to negotiate with the powers on the question of debts. In fact, it is reported, that his advisers have warned him that to take any such action would be for President Roosevelt to commit political suicide. As for France, M. de la Boulays, the French Ambassador, conferred with Mr. Roosevelt on Thursday last and afterwards indicated that his object was to determine the United States' attitude rather than to make a specific offer. M. Herriot has acquainted his government with the result of his conversations with President Roosevelt; and the latter has been repeating that France must pay up her instalments. But it is no longer a matter for doubt that the French Chamber is as adamant in its attitude on with-holding payments as the congress probably is in regard to the revision of debts. It is only in Britain that evidence of vacillation and a slow inclination towards default is available in increasing abundance. Among a number of subjects that were down for discussion in the House of Commons on the motion to adjourn for Whitsuntide, Mr. Grenfell, the Labour Member, was to ask for a statementt as to the Government's intentions regarding the war debt instalment due to America on June 15. He stated that an enormous debt had been borne without complaint and that Britain had raised on an average nearly £800 million a year for the last ten years, and to the Sinking Fund an average of over £300 million had been paid for the last ten years and that Britain had actually to pay into the Sinking Fund for the redemption of debts for the term of years £500 million and that the nominal figure of the debt stood higher to-day than it did ten years ago. The demand for a statement on the question was met by the Chancellor of the Exchequer with the reply that the Government of the United States was already in full possession of the views of the British Government and that nothing should be done to prejudice the success of the Conference. The separation of the war debts from the Conference Agenda, he added, was inevitable, as it was only a means of negotiation and discussion between the debtor and the creditor. The only development of note in regard to war debts is a special Cabinet meeting which, according to rumour, should have been held yesterday. Unofficial news in Washington inclines to the view that Britain will default, thus forcing the United States to make up its mind on a problem which after all is said and done, is the beginning of the tasks of the World Economic Conference.

P. & O. and BRITISH INDIA COMPANIES

(INCORPORATED IN ENGLAND).

MAIL AND PASSENGER SERVICES.

UNDER CONTRACT FOR THE CARRIAGE OF HIS MAJESTY'S MAILS.
TICKETS INTERCHANGEABLE.
ALL SAILINGS ARE LIABLE TO CANCELLATION OR DEVIATION WITHOUT NOTICE.

Sailings to Coast Ports in India and Burma, between India, Straits Settlements, Ceylon, Java, Hong Kong, China, Japan, Australia, New Zealand, West Indies, Mauritius, East and South Africa, Persian Gulf, Red Sea, Egypt, Mediterranean, Antwerp and London.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1 crore of three months Treasury Bills were opened on Tuesday, June 6. The total amount offered was Rs. 1,41,00,000. Tenders at Rs. 99-11-6 and above were accepted in full and those at Rs. 99-11-3 were alloted approximately 56 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Re. 1-2-5 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, June 13. Successful tenderers should make payment on Friday, June 16. The other conditions are as usual.

STERLING TENDERS.

On Wednesday, June 7, tenders to the amount of £2,350,000 at 1s. 6 1/16d. were received and allotted approximately 42 per cent.

On Tuesday, June 13, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 30th April, 1933, amounted to £40,000,000 and was held in the following form:—

	£
1. Cash at short notice at the Bank of England	3,841
2. British Treasury Bills	16,811,077
3. Other British and Dominion Government Securities	9,582,748

CALCUTTA SHARE MARKET.

Jute.—This section was steady during the period under review. Although ready hessians were very steady owing to bear position being created in the local market, still forward position was irregular. Howrahs consequently fluctuated within narrow limits. They opened at Rs. 53-13, moved to Rs. 54-10 but again receded to Rs. 53-12, while Kamarhattys touched Rs. 508, improved to Rs. 518 but again dropped to Rs. 514. Among other bigger shares sellers were more keen to sell, while buyers were keeping off with the result that prices were lower by Rs. 5 to Rs. 10 points in many cases. Bird Group Mills were more or less neglected. While among Andrew Yule Mills, Cheviots were steady at Rs. 251, Caledonians were wanted at Rs. 535 without many sellers. Budge-Budge changed hands at Rs. 370, Orients came to business at Rs. 230, Bally and Barnagores were lower at Rs. 162 and Rs. 151 respectively. Kelvins were wanted at Rs. 565, while Alliance were on offer at Rs. 328, Anglo-Indias were steady at Rs. 370, Deltas at Rs. 412, Gourepores at Rs. 370 Nationals changed hands at Rs. 24-8, Presidencies at Rs. 6-4, Hukumchands at Rs. 19 and Nuddeas at Rs. 24.

Cotton.—This section showed more activity on the announcement of 25% additional duty on plain grey goods coming from Japan. Dunbars improved from Rs. 215 to Rs. 225, while Bengal Nagpur Cotton improved to Rs. 22-12. Kesorams advanced from Rs. 3-11 to Rs. 3-15 and New Victorias were placed at Re. 1-14.

Coal.—This section displayed limited activity among selected stocks. There was good enquiry for New Manbhoms which improved to -/8/-, while New Beerbhoms were wanted at Rs. 9, Bengal coal on rumours of lower dividend were on offer at Rs. 202, Kalapaharis were placed at Rs. 8-4, ex dividend, North Damudas at Rs. 2-14, Talchers at Rs. 1-8, Naziras at Rs. 6-8, and Burrakurs at Rs. 10-2. Mundulpores came to business at Rs. 2-14 on rumours of the closing up of the colliery.

Miscellaneous.—There was a large turnover in this section. Burma Corporations were wanted at Rs. 8-12, among electric groups Bareilly electric was placed at Rs. 10-12, while Benares was wanted at Rs. 12-2. There were buyers of Daccas at Rs. 14 ex-dividend. Bengal Telephones advanced to Rs. 15-10 on rumours of ordinary shares likely to be given to holders of 2 ordinary shares at par. Among paper shares Titaghurs were steady at Rs. 14-10, while Bengals had buyers at Rs. 168 without many sellers. Midnapore Zemindary were steady at Rs. 70-8. Among Engineering concerns Bengal Irons were placed at Rs. 2, Indian Irons at Rs. 5, Saran Engineering Rs. 6, while Burn & Co., had sellers at Rs. 145. B. I. P. (Ordinary) were wanted at -/13/-, while (Deferred) had buyers at -/10/-. Among sugar shares, Cawnpores were down at Rs. 37-4, while New Savans were easier at Rs. 17, Samastipurs had sellers at Rs. 18, while Ryams were on offer at Rs. 49-8, Bolorampurs and Champarans were steady at Rs. 12-8 and Rs. 29-4 respectively. Murree Brewery were wanted at Rs. 164 without many sellers. This Company has announced 6% ad interim dividend, which is 1% higher than last years ad interim dividend. Bastis and Punjab sugars were wanted without many sellers. Indian wood products had buyers at Rs. 30.

Banks & Railways.—Imperial Banks fully paids and Contributories were on offer at Rs. 1,215 and Rs. 295. Central Banks changed hands at Rs. 21-12, Katakhal Lalbazar Railway were listed at Rs. 72, Sara-Serajgunj at Rs. 83, Mymensingh-Bhairab Bazar (rebate) at Rs. 82-8.

Government Securities.—This section was dull during the period under review. 3½% paper opened at Rs. 81-6, 4 per cent. 1960-70 at Rs. 94-2, and 3½% 1947-50 at Rs. 92-2. As the week advanced, better demand was noticeable for short-term securities but very little offering. 3½% kept steady and improved to Rs. 81-8, 1960-70 to Rs. 94-6. The Bank rate remained unchanged at 3½%.

Tea.—A large volume of business was reported in this section at advancing rates but as the session progressed profit taking was in evidence. North Western Cachar quickly advanced to Rs. 225, Sonai River were wanted at Rs. 15-4, while Ledos improved to Rs. 165. Darjeeling tea and Chincona changed hands at Rs. 236 recording a rise of Rs. 40 points above last business. On profit taking sellers of popular stocks appeared such as Jutlibari, Bishnauth, Rutema, Eastern Cachar and Daurachera, Teloijan and Hattikhira. The undertone is very strong.

BOMBAY STOCK EXCHANGE.

(By Wire.)

From our Correspondent.

The rise in the dollar-sterling cross rate has attracted considerable attention of the market and it is generally expected that the dollar-sterling cross rate may soar still higher. Owing to the consistent rise in commodity prices, mainly influenced by American advices, shares developed buoyancy at the beginning of the week.

Later in the week, the long-awaited government announcement, raising duties on non-British imports of cotton textiles, imparted a further stimulus, and numerous fresh purchases were made in cotton mill shares. Better feeling is expected to prevail in the coming weeks. Reduction of wages, steadier cotton, increased protection of Japanese dumping, better offtake of cloth are the principal factors which may stimulate a fresh enquiry in mill shares.

Steels also attracted considerable attention, though, at the close, bull liquidation caused a sharp setback. The principal factor affecting steels is the prospects of Tata Second Preference being put on forward list. At the close, chances appeared very doubtful.

The giltedge market is quite lifeless being mainly governed by London advices. Owing to the uncertainty regarding war debt instalment payable on 15th June, principal market operators are prone to transfer their affections to shares. Cheap money, however, has resulted in enquiry for various odd scrips. London advices are better and gradual recovery is expected. 3½ per cent. Paper closed at Rs. 60-8, though it touched the higher level of Rs. 81-9 during the week. There are numerous sellers of New Loan at Rs. 92.

WHEAT.

(By Wire.)

(From Our Correspondent).

Karachi, June 8.

Since reporting last week the wheat market has become further weak, and stands at Rs. 24-8-3 for July. The tone is moderately steady.

COTTON.

(By Wire.)

(From Our Correspondent).

Karachi, June 8.

Cotton here mainly follows the American tactics, but the general feeling is not bullish. Jobbers are inclined to liquidate and prices are easy at Rs. 17-11-6 for Sind Desi and Rs. 22-7-0 for Sind American.

SHELLAC.

Further declines in prices than those reported last week have taken place. The market is however steady.

Shipments up to Jue 5, were 4,123 chests.

JUTE AND JUTE GOODS.

JUTE.

Calcutta, 9th June, 1933.

During the week under review, the market ruled quiet but irregular with prices for Ready Firsts ranging between Rs. 36/- to 33/-. There have been heavy arrivals from the mofussil and the mills have not been as keen to buy as they were in the last week. The London market is also showing slightly less interest and with the reports of the coming crop being quite satisfactory, consumers' anxiety to buy seems to have greatly diminished. The uncertainty of the development in the Disarmament Conference and the complications regarding the War Debt question have further thrown a wet blanket on the activities of buyers and have considerably checked the upward trend in the market. The future prices will be greatly determined by the results of the Economic Conference and the world's eyes are turned at present to London, the venue of the Conference.

Quotations of the East India Jute Association Ltd., for October futures are:—

Arrivals and Exports of Jute—

Arrivals of Raw Jute into Calcutta and the mills situated outside the Calcutta Trade Block during the week ending June 3, 1933 and during the corresponding week of 1932 were 174 and 57 thousand bales respectively. Arrivals from 1st July 1932 to 3rd June, 1933 and corresponding period of 1931-32 were 8,110 and 6,446 thousand bales. Exports from Calcutta and Chittagong during the week ending June 3, 1933 and the corresponding week of 1932 were 122 and 20 thousand bales. Exports from 1st July 1932 to 3rd June 1933 and the corresponding week of 1931-32 were 3,143 and 3,030 thousand bales respectively.

HESSIAN.

Calcutta, 9th June, 1933.

The market during the week under review, ruled steady but quiet with consuming centres showing less interest at the higher levels. The statstical position, is, however, very sound and American markets have kept quite steady due to the inflationary policy of the Government. Reports from America indicate that there has been an appreciable substitution of cotton bags by Burlap and there is an improved trend in the Burlap market in America. Taking everything into consideration it may be assumed that while prices may not go up much higher in the near future there is very little likelihood of any serious fall taking place in the market.

COTTON AND COTTON GOODS

COTTON.

The market during the week under review had ruled steady in the earlier part with an easier tendency towards the close. The steadier conditions were mainly due to the acreage reduction report. Profit taking sales were easily absorbed. Later however the market became more irregular and bullish factors became more disturbed. Technically the market was overbought and prices appeared to be too high. Consequently there was a drop from Rs. 224 to Rs. 212 in the course of two days. The general opinion however has been that it is desirable to buy at all set backs.

The weather recently has been more favourable, though crop conditions are still backward. The statistical position of cotton is somewhat better. For the first eight months of the season world spinners used 16,200,000 bales of all kinds against 15,650,000 bales in the corresponding period of last year. Of these 9,200,000 bales were of American cotton and 7,000,000 bales of outside growths. Stocks at the end of March were 750,000 bales less than a year ago, with world's production of all cotton about 3,750,000 bales less than last season.

With the near approach of the Economic Conference and the determination of Governments to raise commodity prices, it appears that advantage should be taken on setbacks to effect purchases as still higher prices seem inevitable.

The following private estimate of the growing crop of American cotton, published on June 1, shows a substantial increase of 1,797,000 bales as compared with the final Bureau returns for the previous crop:—

	Private Estimate. bales.	Final Bureau Report. 1932 Crop. bales.
Total Crop ...	14,500,000	12,703,000
Condition ...	73.0%	65.6%
		(August 1, 1932).

The market anxiously awaits the first official Bureau forecast on July 8, though it will have something to work on when the official acreage report is published on June 8.

The official weekly report of weather conditions over the United States cotton belt states that planting has now made a fair advance in the north-western part of the belt but that in some of the western and central districts, the advance is still slow. In Texas, the cotton has improved rapidly following the generous rains which have fallen there and there is ample time to save the crop in those sections which were previously dry.

4, LYONS RANGE, CALCUTTA

Arrival and Exports of Raw Cotton.

The arrivals of Raw Cotton into all the principal centres during the week ended June 3, 1933, amounted to 12,626 tons, against 12,394 tons during the corresponding period in 1932. The arrivals in Bombay from 1st September, 1932 to 1st June, 1933 and the corresponding period in 1931-32 were 2,172 and 1,806 thousand Bales respectively. The exports of Raw Cotton from all ports during the week ended June 3, 1933 and the corresponding week of 1932, were 7,580 and 6,599 tons respectively. The exports from 1st September, 1932 to 3rd June, 1933 was 363,295 tons against 220,458 tons during the corresponding period in 1931-32.

PIECEGOODS.

Calcutta.

A firmer tendency has prevailed in the piecegoods market in Calcutta during the week under review. The volume of business has not been very large but a confident and optimistic tone is prevalent in the market. It was due partly to the higher prices of cotton and partly to the improved enquiry. The imposition of additional duties on Japanese grey goods had a further strengthening effect on this section and consequently there was a better enquiry for Indian coarse goods. The enquiry for Indian goods was noticeable in most of the sections, and the transactions include a wide range of popular qualities though it can be said that Dhooties and grey shirtings constituted the bulk of the turnover.

Yarns.

Trade in yarns during the past week has proved disappointingly small but this was only to be expected in view of the continued firmness of costs of production, buyers not having reacted to the same extent. Inquiry, however, has been well maintained and local values on balance, show an all round appreciation. Negotiations in respect of Indian spinnings have brought about a certain amount of business, both ready and forward, in coarse and medium counts at improved rates. Nothing of importance appears to have been transacted in Lancashire fine yarns but in view of the stock position it is generally felt that buyers cannot afford to remain aloof any longer and that sooner or later purchases will have to be made.

Active conditions have prevailed in the Japanese section, especially in regard to "ready" goods, large quantities having exchanged hands in the bazaar at improved prices. Although forward sales have been few and far between, it is understood that Japanese importers have operated on a large scale in 40s. grey for June shipment in anticipation of higher values. A slight falling off in demand from distributing centres has been noticeable during the period, resulting in a reduced offtake, as compared with the previous week.

Madras.

There is little change to report during the week under review. The prices are more or less maintained with a slightly easier tendency especially in white goods. Heavy rains from the West coast are preventing business in that quarter and also in Tinnevelly. The recent rise in Lancashire markets had but poor response from the local markets, the values not rising proportionately.

Yarn Section.

There has been slightly more retail business done this week but this does not mean that there is any appreciable activity in the market. Fine count yarns are more in demand than they have been for some considerable time past and it is reported that some dealers have tried to purchase goods for forward shipment. The prices quoted, however, by Manchester spinners are so very much in advance of what local merchants are able to pay that no business has been booked.

Japanese 40s. grey yarn is quoted at Rs. 6-10-6 per 10 lb. bundle and if the price of raw cotton continues firm for a further period there should be an appreciable advance in the price of stocks of this particular quality of yarn. The demand for 40s. bleached yarn is at present practically non-existent owing to the restricted production of cotton kailies. 60s. grey yarn is only saleable in retail quantities at about a penny per lb. below, the prices quoted for replacements.

Amritsar.

During the week under review the market has ruled active and great business for immediate needs has been placed. Larger attention is paid to cheap Japanese goods. Large orders have been sent for artificial silk. Among other fancy goods poplin and mercerised cotton goods are receiving the largest amount of attention. Fair amount of business in Lancashire standard white goods, muslin and shirtings is also reported done. In prints and Chints the volume of business has been poor except for French and Italian prints used for children's garments. Boskies and voiles are in demand, special attention being paid to cheaper goods only, higher prices stuff being more or less neglected. In the Indian section export demand was poor and the general enquiry dull. Dealers are carrying only small stocks and avoiding full stocks.

Colombo.

Further depressing conditions in the textile trade have been the feature of the week, the recent floods having accentuated the already depressed conditions. Not only have the people been rendered homeless, but the rail and road traffic have also been seriously dislocated. The floods are reported to be the worst of its kind witnessed for the last twenty years. Though there has been raising of prices in Japan and Manchester, the over-stocked local conditions have brought out forced sales at below imports and replacing cost. The only bright spot is the optimistic tone of rubber and tea markets.

Imports of Cotton Yarn and Piecegoods into INDIA during March, 1933—*General.*—There was hardly any change in the total imports of cotton yarn during March as compared with February the figure remaining practically at the same level of 2.7 million lbs. There was, however, an enormous in the imports of cotton piecegoods, the total being 105.7 million yards as compared with 82.5 million yards in February and 927 million yards in January last. This is the highest figure reached since September 1932.

Cotton Yarns.—There was a slight decrease in the imports of grey single yarns which stood at 1.8 million lbs. as compared with 1.9 million lbs. in February. Takings of grey two-fold yarns fell off considerably and stood at only 219,000 lbs. as compared with 600,000 lbs. in February. Imports of grey singles yarn of 31s. to 40s. counts were just under a million pounds, while the imports of yarn of above 40s. counttst at 581,0t00 lbs. were higher by 300,000 lbs.

The imports of bleached yarn at 370,000 lbs. showed an increase of 152,000 lbs. over the figure for February. The bulk of these imports came from the United Kingdom.

The imports of mercerised yarn stood at 381,000 lbs. of which no less than 377,000 lbs. came from Japan.

Cotton Piecegoods.—The total imports of cotton piecegoods amounting to 105.7 million yards were taken up by the various importing centres as under:—

		Million yds.			Million yds.	
Bengal	...	35.7	as compared with		25.6	in February.
Bombay	...	25.2	do.	do.	20.3	do.
Sind	...	27.2	do.	do.	25.1	do.
Madras	...	5.9	do.	do.	3.6	do.
Burma	...	11.8	do.	do.	7.9	do.

The imports of grey goods amounted to 31.3 million yards as against 25.1 million yards in February. The United Kingdom and Japan held trade between them, the former sending 15.8 million yards and the latter 15.3 million yards.

The imports of bleached goods totalled 38.6 million yards as compared with 29.9 million yards in February. Imports from the United Kingdom rose from 21.9 million yards in February to 28.3 million yards in March, while takings from Japan also showed an increase from 6.9 million yards to 9.2 million yards.

In coloured, printed and dyed goods, imports for the month were 33.3 million yards as compared with 25.2 million yards in February, and were higher by 3 million yards as compared with the January imports which stood at 30.2 million yards.

BOMBAY LIFE

COMPANY Ltd
1933-VALUATION
BOMBAY
AND
JUBILEE YEAR

Artificial Silk Piecegoods.—There was a fall in the imports of artificial silk piecegoods which stood at just under 9 million yards, as against 10.1 million yards in February. Japan's share of this trade amounted to 8.2 million yards.

Imports during the Fiscal Year 1932-33: Cotton Yarn—The total imports of cotton yarn during the fiscal year ended 31st Marcth, 1933, amouned to 45.1 million lbs. as compared with 31.6 million lbs. in the previous fiscal year. Of this total, 13.4 million lbs. came from the United Kingdom as compared with 11.9t millian lbs. in the last fiscal year, and no less than 18.1 million lbs. from Japan compared with only 6.2 million lbs. in 1931-32. The major portion of the imports from the United Kingdom consisted of fine count grey singles and bleached yarns. The increase in the imports from Japan was made up of an increase of 6 million lbs. in 31s.—40s. grey singles yarn ; 2.4 million lbs. in grey two-fold yarn ; and 3 million lbs. in mercerised yarn. The total imports of yarn from China remained practically stationary at 13.3 million lbs. during the year. The bulk of these imports were grey singles yarn of between 30s. to 40s. counts.

Cotton Piecegoods.—Imports of cotton piecegoods during the year the totalled 1,225.3 million yards compared with 775.6 million yards in 1931-32. Of this figure, the imports of grey goods amounted to 356 million yards as compared with 249 million yards in the preceding year. When England increased her share of this trade from 60 million yards to 111 million yards, Japan increased hers from 185 to 244 milion yards.

Imports of bleached goods for the year 1932-33 totalled 413 million yards as compared with 280 million yards in 1931-32. The United Kingdom's share of this trade was 281 million yards, as compared with 207 million yards in 1931-32, while Japan's share at 120 million yards was exactly double that of the preceding year. The progress made by Japan in this category is very forcibly brought out in the table given below showing the total imports from Japan, since 1929-30.

	Total imports of Bl. goods (in million yd.)	Imports of Bl. goods from Japan.	%age of total imports.
1929-30 ...	474	14	3%
1930-31 ...	272	28	10.3%
1931-32 ...	280	60	21.4%
1932-33 ...	413	120	29%

The imports of coloured goods amounted to 425 million yards as compared with 223 million yards in the preceding fiscal year. Japan increased her share of this trade also from 95 to 215 million yards while England increased her share from 110 to 194 million yards.

Art. Silk Piecegoods.—The imports of artificial silk piecegoods again showed an enormous increase as compared with the previous year, and amounted to 125.3 million yards. The consistent progress made by Japan in this class of goods is shown by the following table of the imports of art. silk piecegoods and Japan's share of the trade since 1930-31.

	Total imports of Art. Silk Piecegoods.	Imports of Art. Silk Piecegoods from Japan.
1930-31 ...	51.5	38.2
1931-32 ...	84.6	74.6
1932-33 ...	125.3	114.5

BULLION

GOLD.

During the week under review the market has ruled easier without much business passing. Due to the more or less steady conditions in the London-Paris cross-rate the fluctuations in the local market were confined to near about Rs. 30-6. Distress gold is arriving in fairly large quantity and is exported abroad. Stocks and offtake in Bombay remain almost unchanged as reported last week.

The highest and lowest price of gold per fine ounce during the week were—

	s.	d.
June 6	122	6
June 7	122	0

The highest and lowest prices of Mint gold ready were as follows:—

	Rs.	A.	P.
June 1	30	5	9
June 7	30	3	9

London.—During Air Mail week, moderate amount of gold were available in the open market. Continental buyers readily absorbed all that was on affer, but the demand was less keen, although prices were again at a premium over the franc parity. The price dropped from 123 sh. 2d. on May 18, to 122sh. 6d. on May 23, but rose slightly again to 122sh. 8d. on May 24.

Gold shipments from Bombay last week amounted to about £1,224,000. The s.s. "Ranchi" has £515,000 consigned to London, £67,000 to Amsterdam and £19,000 to Marseilles, the s.s. "Tarantia" has £178,000 destined for London and the s.s. "President Van Buren" has £445,000 also consigned to Marseilles.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 15th May to mid-day on the 22nd May:—

Imports.

	£
Germany	200,286
Netherlands	400,728
Belgium	107,059
France	4,817,892
Switzerland	82,689
Iraq	21,898
U. S. A.	43,156
British South Africa	1,327,665
British India	1,103,952
British Malaya	37,713
Australia	254,043
New Zealand	56,461
Canada	1,279,201
Other countries	14,200
Total ...	9,746,943

Exports.

	£
Germany	1,300

France	43,503
Switzerland	94,821
Austria	12,811
Czechoslovakia	24,620
Uruguay	407,085
Other countries	6,188
Tottal ...	660,628

SILVER.

Like gold silver has also ruled quiet but steady during the week under review. The Continent has bought and sold in the London market and the market in general has remained featureless. The fluctuations are very narrow and

confined to As. 8 over and below Rs. 58. Stocks in Bombay and Calcutta are in the neighbourhood of 9,000 bars with a daily offtake of about 60 bars. The tendency of the market is very uncertain.

London.—The Silver market in London in Air mail week, opened rather dull and as a result of America selling on a market not sufficiently supported, quotations declined to 18½d. for cash and 18 9/16d. for two months delivery by the 19th May. The next day, there was some fresh activity on receipt of the news from America of Senator Pittman's six-point programme for the re-habilitation of Silver, this induced sellers to hold back, and prices rose sharply, quotations being 11/16d. higher at 19.3/16d. for cash, and 19½d. for two months delivery. Buyers were not inclined to continue the pressure, and on re-selling by speculators there was a reaction of 7/16d. and ½d. for the respective deliveries on the 22nd May. Later the tone of the market was quieter.

During the week, America both bought and sold, but the Continent did not sell on any large scale. Indian Bazaars made some re-sales, but were more inclined to give support.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 15th May to mid-day on the 22nd May:—

Imports.

	£
Soviet Union (Russia)	29,916
Germany	28,920
Japan	8,812
British West Africa	14,684
Aden and Dependencies	5,670
Australia	16,210
New Zealand	4,355
Other countries	7,927
Total ...	116,494

Exports.

	£
Norway	2,835
Germany	3,685
French Possessions In India ...	6,500
Yugoslavia	28,785
U. S. A.	116,675
British India	49,050
Straits Settlements	5,160
Other countries	6,856
Total ...	219,546

The stocks in Shanghai on the 20th May consisted of about 141,400,000 ounces in sycee, 255,000,000 dollars and 5,900 silver bars, as compared with about 143,400,000 ounces in sycee 250,000,000 dollars and 8,760 silver bars on the 13th May.

Imports & Exports of Gold & Silver.

The import of gold from foreign countries during the week ending June 3, 1933 were Rs. 213,000, against Rs. 96,000 during the corresponding period in 1932.. The Exports during the same period were Rs. 1,39,80,000 against 94,00,000 during the corresponding period in 1932. Imports of silver during the above week were Rs. 6,71,000 against Rs. 7,32,000 during the corresponding period in 1932. Exports were nil against Rs. 1,66,000 during the corresponding week in 1932. The imports of gold during the period from 1st April to 3rd June in 1933 and 1932 were Rs. 11,45,000 and Rs. 12,99,000 respectively. The exports during the same periods were Rs. 11,17,32,000 and Rs. 8,48,21,000.

TEA AND COFFEE

TEA.

(From our Special Tea Correspondent).

The first auctions held in Calcutta since the imposition of the Export licences took place on 5th instant and offers a favourable opportunity to discuss the position.

Common teas sold at As. 6 to As. 6-6. This compares favourably with the rock bottom of As. 3-6 in August-September and therefore shows a good improvement.

Fine teas went slowly at auction but when sellers knew their job and held for valuations, advances of 4 to 5 annas per lb. resulted on Tuesday morning for the best quality teas.

Mediums did not do so well but, the fact that the first sale of the season was good enough shows that combination by sellers promises to do good.

Roughly the world position of Indian tea is as follows:—

Consumption	850 million lbs.
Stocks, U. K.	290 ,, ,,
Export quota	685 ,, ,,

With the export quota 165 million below world requirements, a big hole will soon be made in the somewhat heavy stock figure. I give it as about 3 to 4 months at most, before buyers awake to the fact that a shortage is in sight. So much for markets outside countries of production.

Locally, if climatic conditions are good in 1933 and no restriction of crop is arranged, then the unexportable teas are going cheap but I am informed that having got the export restriction agreed to, the Indian Tea Association is now busy on restriction of crop also.

If this materialises so much the better, but in any case tea companies are now assured of selling over 80 per cent. of a normal crop at profitable prices—and as the agreement is for a period of five years—subject to whatever adjustment of percentage of restrictions may seem desirable, the tea industry can be congratulated on having worked out a sound, sensible programme which should greatly benefit all those connected with the industry.

On Monday last Calcutta had the first tea auction of the season after the introduction of the export regulation scheme. There was a change in the procedure of the sale. Teas with export rights will be offered on Mondays and those for internal consumption on Tuesdays.

The export tquantity available this week was 13,000 packages. As usual in the first sale offerings of Darjeelings were heavy and fully average in quality. The demand was poor and prices irregular. The quantities suitable for the continent sold satisfactorily but otherwise prices for other qualities were lower than expected.

Common and low medium teas sold readily at 6-6 to 6/9 and nothing could be bought under 6 as. Stand-out Dooars realized good prices but ordinary liquoring teas lacked support and fetched little more than common tea.

Tea for internal consumption was offered on Tuesday, and fetched one to one and a half anna per lb. less than Mondays rates for teas for export. The offerings consisted chiefly of common and low mediums which realised 5 to 5-6 annas against export quality which fetched 6-6 to 6-9 annas. Dust met good support and were sold at 4-6.

London.

Advices from London dated May 27 show that the auctions during the week went in favour of sellers. Demand for Indian teas were keen, cheaper grades being particularly in favour. These in many cases advanced ¼d. per lb. The tea was very firm. The market was active and all descriptions sold well. In the case of Ceylon teas also, good demand was in evidence, and prices were generally firm, medium broken orange pekoes being in special request, advancing in some cases by ¼d. The supplies of Java tea were a little less than at the previous auction. Strong competition was witnessed again in all grades. Some fluctuations was noticeable in the case of tippy orange Pekoes, but other kinds were firmer than last week and advance of ¼d. per lb. was noticeable in many cases.

The London Tea Brokers' Association's average figures for sales of tthe week ending May 27, with the usual comparisons, are as follows:—

	Week ending May 27.	Last week.	Corresponding sales 1932.
	d.	*d.*	*d.*

TEA CROP PROSPECTS.

The following telegram has been sent by the Indian Tea Association, Calcutta, to the Association in London on May 3, regarding the prospects of crop:—

Upper Assam.—Outturn last month below normal. Immediate prospects fair. Weather unfavourable.

Central Assam.—Outturn last month below normal. Immediate prospects fair. Weather seasonable.

Lower Assam.—Outturn last month below normal. Immediate prospects fair. Dry weather is interfering with outturn. Red spider blight prevalent in some districts.

North Cachar.—Outturn last month about normal. Immediate prospects fair. Weather seasonable.

South Cachar.—Outturn last month about normal. Immediate prospects fair. Weather seasonable. Red spider blight prevalent in some districts. Outturn to date is considerably under last year.

Eastern Dooars.—Immediate prospects fair. Weather seasonable. Red spider blight prevalent. Outturn to date is slightly over last year.

Western Dooars.—Outturn last month about normal. Immediate prospects uncertain. Weather favourable. Red spider blight prevalent.

Sylhet.—Outturn last month about normal. Immediate prospects fair. Good rain has fallen generally and prospects are now brighter.

Darjeeling.—Outturn last month about normal Immediate prospects fair. Weather too cold for the time of year and is checking leaf. Mosquito blight prevalent in some districts. Red spider blight severe.

Terai.—Outturn last month about normal. Immediate prospects fair. Weather seasonable. Crop prospects generally are favourable. Red spider blight prevalent.

At the London auctions on May 31, 22,900 packages of Indian tea were submitted for sale.

There was a good demand, except for better medium Assam teas, particularly light liquoring sorts, which were weak. Low medium and common kinds were firm and were occasionally a farthing per lb., higher. Other grades remained unchanged.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last tauction 7¾d., to-day's auction 8d. lb.; Common Broken Peokoe last auction 8¼d., to-day's auction 8d. lb.; Common Orange Pekoe last auction 8d., to-day's auction 8d. lb.; Common Broken Orange Pekoe last auction 8¼d., to-day's auction 8d. lb.; Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 8d., to-day's auction 8d. lb.; Clean Common Broken Pekoe last auction 8¼d., to-day's auction 8½d. lb.; Clean Common Orange Pekoe last auction 8½d., to-day's auction 8½d. lbs.; Clean Common Broken Orange Pekoe last auction 8½d., to-day's auction 8½d. lb.; Clean Common Broken Pekoe Souchong last auction 8¼d., to-day's auction 8¼d. lb.

At the London auction on June 1, 12,000t packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition for all descriptions. Tippy teas had a good support at last rates. Medium kinds, except Broken Pekoes, were often a farthing per lb. higher.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 5¾d., to-day's auction 5¾d. lb.; Common Broken Pekoe last auction 5½d., to-day's auction 5d. lb.; Common Orange Pekoe last auction 6d., to-day's auction 6d. lb.; Common Broken Orange Pekoe last auction 6d., to-day's auction 6d. lb.; Common Broken Pekoe Souchong last auction 6d., to-day's auction 6d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 6d., to-day's auction 6d. lb.; Clean Common Broken Pekoe last auction 6d., to-day's auction 6¼d. lb.; Clean Common Orange Pekoe last auction 6⅜d., to-day's auction 6½d. lb.; Clean Common Broken Orange Pekoe last auction 6⅜d., to-day's auction 6½d. lb.; Clean Common Broken Pekoe Souchong last auction 6d., to-day's auction 6d. lb.

The following were the average prices of tea in the London market during the week:—

Indian Tea (Northern) last week 9.59d., this week 9.47d. lb.; do. (Southern) last week 10.51., this week 10.53d. lb.; Ceylon Tea last week 11.20d., this week 11.13d. lb.; Java Tea last week 6.88d., this week 7.37d. lb.; Sumatra Tea last week 6.49d. this week 6.49d. lb.

Tea Quantities for Sale this Week:—

Indian: 53,000 packages, of which 51,600 are on garden account; Ceylon: 26,600 packages, of which 26,300 are on garden account.

ARRIVALS AND EXPORTS OF TEA.

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

Quantity of tea entered for export to United Kingdom for the second half of May 1933.

Calcutta.—Black 2,112,520 lbs., Green Nil; Chittagong—Black 490,925; Green Nil.

Quantity entered during the corresponding period last year.

Calcutta.—Black 1,887,075 lbs., Green Nil; Chittagong—Black, and Green Nil.

Total from April 1, 1933 to May 31, 1933.

Calcutta.—Black 4,580,865, lbs.; Green Nil; Chittagong—Black 591,502; Green Nil.

Total 55,172,367 lbs.

Total from April 1, 1933 to May 31, 1932.—5,351,735 lbs.

Arrivals and exports of Tea:—

During the week ending 3rd June, 1933, the arrivals of tea into Calcutta amounted to 2,295 thousand pounds, showing a decrease of 131 thousand pounds on that in the corresponding week of 1932. The exports by sea during the same period, from Calcutta and Chittagang amounted to 1,307 thousand pounds, which shows an increase of 742 thousands pounds over those during the corresponding period in 1932. The exports of tea from all ports during the months of February, March and April 1933, amounted to 19,340; 13,679; and 6,709 thousands pounds respectively; while those during the corresponding months in 1932 were 15,601; 5,095 and 5,545 thousand pounds respectively. These figures indicate the improved prospects of Indian tea abroad.

EXPORTS OF COFFE.

The exports of coffee from all ports during the months of February, March and April 1933 were 19,48 and 24 thousand cwts. respectively against 43,27 and 41 thousand cwts. respectively during the corresponding months in 1932. The total exports for the three months together shows a decline of 16 thousand cwts. on those in the same period during 1932.

The quotations at Bangalore on May 29, were as follows:—

Nilgiri Peabony	...	Rs.	78	0 to 80	per	cwt.
Native ,,	...	,,	57	8 to 58	,,	,,
Nilgiri Parchment	...	,,	76	0 to 77	,,	,,
Native Flat	...	,,	47	0 to 48	,,	,,

At London, the quotation for East Indian superir quality per cwt. is 140sh.

SUGAR

The market during the week under review has ruled easy without much business passing. Indian sugar continues to find a ready market. The general impression has been that fairly stable conditions will rule in the market, consequently there has been a more confident feeling in the market.

The world sugar markets have ruled easier, less interest being shown. The consumption of raw sugar in Europe during the eight months ended May 31 is estimated by

Imports & Exports of Sugar.

The total Imports of Sugar from all countries during the week ending June 3, 1933 amounted to 30,106 cwts. against 68,735 cwts. during the same period in 1932. The quantity imported during the three months February to April, 1933, from all countries was 124 thousand tons, against 166 thousand tons in 1932.

GRAINS AND SEEDS

WHEAT.

After ruling steady during the earlier part of the week, the wheat market in Calcutta has ruled easier towards the close. Although the futures market is fairly steady but there is an easier undertone. It is due to the feeling that the reports of damage done to the harvested crop is unfounded and that the general condition of wheat crop was quite satisfactory. The stockholders also came out as sellers taking profits; therefore the undertone became easy.

The stocks in port towns are enough for their immediate requirements. It is however apprehended that the same might be augmented by increased despatches from the interior to the ports.

Quotations are:—

Chandausi Ready	... Rs.	4 0 0	per md.
Cawnpore Selected	... ,,	3 12 0	,,
Australian ...	... ,,	3 14 0	,,
Beta September	... ,,	3 14 6	,,

Foreign.—Worlds wheat markets have ruled very steady with a brisker trade and better enquiry in several centres and exchanges. Considerable interest attaches to the prospects of the American crops regarding which reports of further deterioration are still being received. In Europe, according to the International Institute of Agriculture at Rome, a particularly good yield, even in excess of last year's returns may now be anticipated, but to what extent this surplus may be off-set by the deficit in America, remains to be seen. The outlook at present is uncertain, and irregular price movements may in consequence be experienced in the near future.

The Liverpool Terminal market closes dull with buyers reserved, following active trading in the earlier part of the week which resulted in higher rates being realized.

WHEAT AND OILSEEDS

The following is a summary of All-India fourth wheat and final winter oilseeds (rape, mustard and linseed) forecasts, 1932-33:—

Wheat.—Area 32,613,000 acres as against 33,805,000 acres (revised) at this time last year showing a decrease of three per cent. Yield, 2,299,000 tons as against 9,097,000 tons (revised) in 1931-32 or an increase of two per cent.

Rape and Mustard.—Area 6,052,000 acres as against 6,214,000 acres in 1931-32 showing a decrease of 3 per cent. Yield 1,047,000 tons as against 1,025,000 tons in 1931-32 or an increase of two per cent.

Linseed.—Area 3,239,000 acres as against 3,301,000 in 1931-32 showing a decrease of 2 per cent. Yield 4,03,000 tons as against 4,16,000 in 1931-32 or a decrease of 3 per cent.

The condition of the crops is fairly good.

Rice.—Forward quotations outside the rice market today were: Big Mills Specials Rs. 165 (June); Rs. 167 (July); Rs. 170 (August) and Rs. 172 (September).

Quotations in the rice market were; Big Mills Specials Rs. 165 to Rs. 167-8; Small Mills Rs. 172-8 to Rs. 175; Special Quality Rs. 182-8 to Rs. 185 and Meedone Rs. 185 to Rs. 187-8.

Boiler rice prices were: Long Rs. 205 to Rs. 215; Milchar Rs. 180 to Rs. 190; Yathalay Rs. 200 to Rs. 215; Broken Rs. 90 to Rs. 105 and Meal Rs. 17-8 to Rs. 20.

Paddy was Rs. 63 to Rs. 64 (river) and Rs. 60 to Rs. 61 (rail). Arrivals of Paddy 157,000 baskets.

COUNTRY PRODUCE.

Myrabolans.—Jubbulpore average at Rs. 2-2 per md., Jubbulpore No. 1 at Rs. 2-8 per md. Crushed No. 1 at Rs. 3-8 per md. nominal.

Tamarinds.—Black superior quality 10 per cent. seed guaranteed at Rs. 4-0 per md. F.O.R. Docks 5 per cent. seed Rs. 4-8 per md. F.O.R. Docks.

Turmeric.—Pabna (selected Fingers) Rs. 7-8 per md. do. Deshi Rs. 7-0 per md. loose ex-godowns.

Rape Cakes.—1½ to 5 per cent. Nitrogen mds. F.O.R. K. P. Docks, Calcutta packed guaranteed free from Mowha and Pakra cakes, Rs. 3-2 per bag of two mds. F.O.R., K. P. Docks, Calcutta packed with new bags. Market quiet. Local mills quote from Re. 1-3 to Re. 1-4.

Linseed.—Ready Rs. 3-15; Futka Rs. 4-5.

Nux Vomica.—Cuttack average quality sellers at Rs. 2-4 per br. md. loose F.O.R. Dock.

Dal or Split Peas.—Kalai at Rs. 3-12 per md. Arhar at Rs. 5 per md.

Peas.—White Peas Rs. 4-8 per md. Green Peas at Rs. 3-8 per md. Rahar Peas at Rs. 5 per md.

Rice.—Patna Rs. 3-0 per md. loose ex-godown. Banktulsi at Rs. 3-8 per md. loose ex-godown Kalam Kathi at Rs. 3-8 per md. loose ex-godown Kazla or Cooly Rice at Rs. 2-2 per md. loose ex-godown Balam at Rs. 3 per br. md. loose ex-godown.

Kapok.—Double ginned machined cleaned seedless at Rs. 20 per md. baled ex-press house, Sulkea.

HIDES, SKINS AND LEATHER.

There has been a further all round rise in the Hides and Skins market during the week under report. The ready stocks of all classes of hides in the market are lower than what they were in the week previous, contributing to the further firmness in the market. Larger quantities of hides and skins were purchased both by Madras tanners and shippers during the week, at higher prices. A sharp rise was recorded in the price of Arsenicated framed cowhides which went up by Re. 1 per 20 lbs. during the week, and were sold up to Rs. 7-12 per 20 lbs. But in spite of continued rise in the hide and skin prices, the local taneed leathers have not shown any marked increase in rates. The Chinese tanned chrome leathers for shoe uppers are still being sold at almost to-day's raw hide prices, while the prices for sole leather Buffalo hides are being quoted at about 5 to 6 annas per lb., which are only about ½ anna per lb. higher than those of last week. Advices from Cawnpore and Agra hide markets continue to be firm and cowhide prices at Agra are near about Rs. 4-8 per hide for good qualities. The tanned cowhide market at Madras has continued firm which has contributed to he firmness of the local raw hide market. Advices from the foreign markets are also encouraging, and substantial advances have been recorded both in London and Liverpool. To-day's prices for hides and skins in the Calcutta hide market may be quoted as follows:

Cow Hides.

	Per 20 lbs. Rs. A.	Rs. A.
Dry framed Agras arsenicated ...	7 0 to	8 0
Darbhangas	4 0 to	4 12
Patnas	3 8 to	3 12
Dry salted	4 0 to	4 8

Goat Skins.

Average good quality per 100 skins	110 0 to	140 0
Rejects	50 0 to	70 0

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

JUNE 12.

Will the proceedings, which are to begin in London on June 12, be fateful or fatal to world trade and economy? As we wrote the caption of this article, we found we had put July 14 instead of June 12. Doubtless, it is due to inadvertence. But may it also be that there is a deeper instinct that hints at the possibility of the Conference proving the crumbling of an obsolete economic order, even as July 14 saw the end of the *ancien regime*? For our part, it is difficult to view the London Conference as a kind of glorified meeting of businessmen anxious to restore conditions favourable to their activity. And yet that is what it is, in the view of those who believe in the possibility of reviving world trade on the basis of the annotated agenda of the Preparatory Committee or the numerous "joint statements" issued at Washington. We have pointed out repeatedly in these columns that world economy calls for more radical readjustments than have been contemplated in the programme outlined by the American and European statesmen or by the many economists and businessmen who have tried to unravel the tangled problems of the depression. To our mind, the depression is a painful transition to the stage in which each nation will put the revelations of modern science to the utmost use for the fullest utilisation of its own internal resources. What are known as trade barriers are but the scaffolding necessary for rearing a new and more imposing structure. And in attempting to foresee the trends of the future it is necessary to remember that the development of indigenous industry under the protective wings of State help and State regulation involve a more just apportionment of the benefits of economic enterprise among the various classes constituting the population of a country. All this, we believe, is clearly, in the womb of the future; and any attempt to revive international trade in its old form is on a par with the attempt to perpetuate autocracy after the signal triumphs of the French Revolution.

* * *

But we are anxious we should not be misunderstood as suggesting that there is nothing for the World Economic Conference to accomplish in its meeting at London on the date which forms the caption to this article. There is a sphere, clear-cut from the domain in which we claim to foresee vast changes in the near future, where the Conference might well sow the seeds of recovery. Even an ordinary businessman, unacquainted with the rudiments of economic science and much less so with the perplexing niceties which have been thrown into prominence by the present depression knows that, apart from the changes in production and markets, the mechanical equipment of trade and commerce is sadly out of gear. He knows, often to his cost, that even for the smallest deals in export or import business, he has to reckon with tremendous monetary landslides which can baffle the understanding of the best among his class. Exchanges may shoot up or drop down. Duties, wholly or nearly prohibitive, may be imposed within the twinkling of an eye by Governments, who, almost invariably, are armed with emergency powers granted by a willing Legislature. Exchange control and, what is quite different from it, control of exchange alike dog the steps of those engaged in foreign trade. And many of the restrictions to trade between nations are the experiments of an unnatural situation rather than the dictates of national economic aspiration.

There is thus a field in which the representatives of the nations might come to an understanding of mutual and alround benefit without interfering with the forces making for a new economic order in the world. What we mean is that, even if it be supposed that there is to be a radical redistribution of industries and a shuffling of markets, it would still be necessary for the nations to restore a rational system of international money, remove the trade barriers which have resulted mainly, if not solely, from the chaos of currents, being about a tentative understanding among the bigger competitive groups so as to eliminate dangerous friction and facilitate a reasonable rise of prices and thus give world trade a chance to regain its health. For the frantic attempts of national governments to resuscitate their economy on the basis of a rough self-sufficiency, as in the case of Great Britain, for instance, have shown clearly that such efforts have no chance of success unless world trade is again on the move. For the obvious difference between economics and politics is that in the former a break with the past is far more difficult, painful and dangerous than in the latter. Even those, who would welcome the new order of national economic development and more equalitarian distribution, would be ready to recognise that the restoration of normal conditions of internal business and foreign trade is essential for progress.

* * *

It is in this view that it is worth while examining the prospects of the London Conference. And as we have more than once critically examined the remedies that have been either suggested by the Preparatory Committee or indicated in the "joint statements" issued from Washington, it should suffice, and it would perhaps, be more useful, too, to consider only the prospects of the Conference, apart from the theoretical merits of the suggestions. Such being the objective of this article, war debts assume an economic importance, perhaps a little out of proportion to their relation to the economic problems on hand. Here the situation to-day is hardly different from the one which ruled before December 14, last, except that default has now more of precedent and less of disapprobation. But it is too early to pin our faith to forcible assertion for a solution of the debts problem. The official attitude and the formal view remain unchanged. France sticks to her guns, in debts as in disarmament. Britain continues her spineless wobbling, though more than one spokesman of public opinion has swayed decidedly towards default. In America, the President is still in the group of political pusillanimity, fighting shy of Congress and debtor nations alike. And Mr. Ramsay MacDonald has not ceased to play second fiddle to Roosevelt. His agreement to continue the war debts negotiations "concurrently and on parallel lines" with the World Economic Conference holds. But June 15 approaches just as fast as June 12; and unless a last minute moratorium is declared, the resulting acerbity would prove to be the rock on which the conference will lash itself to pieces.

* * *

With ominous prescience, Mr. MacDonald characterised war debts as the "first hurdle;" and it looks as though the Conference will in its race succumb to that first hurdle. It may seem strange, but it is none the less true, that the solution to each one of the outstanding world problems lies outside its legitimate sphere. The World Economic Conference cannot have a proper beginning unless the debts question is settled. The key to war debts lies in disarmament. Viscount Snowden rightly observ-

ed in a speech in the House of Lords during Air Mail week that America will make no concession in regard to war debts unless the Disarmament Conference comes to a definite decision. For in that case, it would be possible for President Roosevelt to suggest to the Congress that the loss on war debts is offset by the reduction in expenditure on armaments.

* * *

To examine the prospects of disarmament in detail would take us beyond the scope of this article. But suffice it that, in spite of the encouraging reports that are sent out from time to time from Geneva, it is difficult for the average man to feel that the vexed question of disarmament would be settled in a manner calculated to further international goodwill and pave the way for a genuine settlement of war debts and the other economic problems.

* * *

We have pointed out already that the solution to each of the outstanding international problems lies outside its legitimate sphere; but it would be useful at the same time to confine ourselves to what may be called the strictly economic problems and examine the prospects of a working agreement among the nations. The stabilisation of currencies and exchanges naturally gains an unparalleled pre-eminence. There is no questioning the view that before any of the other questions like reduction of tariffs or relaxation of exchange control is taken up, the nations must know for certain what is going to be the value of currencies both in relation to gold and in relation to each other. And apart from what may be called the objective importance of currency stabilisation, the events of the last two months have tended to give this question the first place in the minds of the more important industrial and financial nations. It will be remembered that when preparations were first made for the World Economic Conference, the negotiations ended in a fiasco, because Great Britain would not accede to the demand of France and America that, as an essential preliminary to any useful discussion, Britain must consent to return to gold on the basis of a specific gold parity with sterling. Events have marched fast since then. While formerly it was a case of two important gold standard countries endeavouring to bring their united pressure on Great Britain in the cause of the gold standard, now it is a case of France standing aloof in sudden and pugnacious isolation from the countries which have abandoned the gold standard either out of sheer necessity, as in the case of Great Britain, or for purely political considerations, as in the case of America. The position, therefore, in regard to international monetary stabilisation is that there is, in the first place, a tie between Great Britain and America as to the level at which the dollar-sterling rate should be maintained, both countries agreeing presumably on some degree of devaluation from the old gold parity of their respective currencies. In the second place, France is anxious that the two Anglo-Saxon countries must not be allowed to consolidate the vantage ground which they have gained over her by a stolen march. In a refreshingly frank and incisive contribution to the *Financial News*, a Paris Correspondent points out that to France Mr. Roosevelt has the appearance of an adventurer while Mr. Ramsay MacDonald is regarded as a sort of evangelist. A conference sponsored by such unnatural combination, he urges, rouses anything except enthusiasm in France. For France considers managed currency to be a heresy and the gold standard as a gospel. And she is naturally piqued by the insistence of Washington that stabilisation can be discussed in London, though not war debts. While Mr. MacDonald and Roosevelt have expended much time and effort in arriving at a tariff truce more convenient to the parties concerned than serviceable to the objects of the World Economic Conference, the question of exchange truce was quietly given the go-by. And yet it is obvious that no country would consider the question of changes in tariffs, unless it is assured that the object of tariffs would not be frustrated by changes in the external value of currencies. The British Government have, perhaps, argued to themselves that exchange truce during the continuance of the Conference, which, for aught we know, might drag on its proceedings for months, would be a great hindrance to the programmes of reconstruction that they have now on hand. Likewise, the United States must also be keen on retaining freedom of action for shaping her internal price level and the external value of the dollar to the requirements of the country as conceived by those in power.

* * *

It is too much to believe that the European statesmen did not adequately appreciate the preliminaries essential to an understanding as regards the exchanges and currencies. If rates are to be pegged, the levels at which they are pegged must mean something. Pegging must be preliminary to *de facto* stabilisation and *de facto* to legal stabilisation. Credit policy must "conform". But to Washington apparently the best method of solving a problem is, like Mark Twain's prescription for temptation, to shirk it.

* * *

It should be sufficient to examine the more important problems and see how far it is possible for the nations to arrive at an amicable and useful understanding. For they all constitute hurdles; and it is only after the nations have successfully negotiated them that they could proceed to consider the question of tariffs and the questions affecting the various commodities and other markets. Far from attempting to tackle these hurdles one by one, the sponsors of the World Economic Conference have concentrated all the problems at the same time. June 12 is the date of the Economic Conference. June 14 sees the beginning of the Disarmament Conference. June 15 is the due date for the next instalment of war debts. And the talks on war debts are to be concurrent and on parallel lines'. The interdependence of all these problems will only serve to complicate them and to widen the discords among the various delegations. On the top of all there is the week's rise in the cross-rate; and judging from the state of opinion in Britain as indicated by the Air Mail papers, Britain must be feeling very cross with the authorities in the U.S.A. It would be rashly optimistic to believe that the Conference can pull through under such unpropitious circumstances.

PRICES & REVIVAL.

The middle of 1933 like the middle of 1932 has seen the emergence of the hope that the depression has neared its end and that a genuine revival of trade and industry may not be far off. Last year, the hope was based on a rise in prices; and as business was in a mood to catch at a straw, there was a distinct bustle all over the world and some sections of opinion were found to encourage actively the growth of revivalist sentiment. "*Indian Finance* was among the few to utter a timely warning to businessmen not to be misled by a rise in prices which, judging by the available evidence, was bound to be short-lived. The last quarter of 1932 proved to be a period of declining prices. An apparently similar phenomenon has repeated itself during this year but it would be obviously a mistake to argue on analogous lines. Far deeper and more numerous forces have been at work during the last three months to bring about the changes in the price structure which we have attempted to epitomise in the table below: Within the compass of a short table, we have outlined the course of the important exchanges, and the prices of the precious metals, leading international and Indian stocks, Indian and sterling giltedge securities and the principal primary commodities. The dates

chosen for the respective and comparative quotations will show that the assumption implicit in the choice is that the fortunes of the dollar during the last three months have determined, in pre-eminent measure, the course of prices over the world.

* * *

We should deem it necessary to warn our readers against rushing to the conclusion that the changes in the value of the dollar have directly affected the prices of stocks and commodities or of the precious metals. If by "fortunes of the dollar" are meant the changes in the financial and economic policy of the United States, they might well be regarded as the primary cause of the rise in prices indicated in the table. It is not our purpose to offer any detailed examination of the conclusions or inferences that may be made from our study of the table. We aim rather at clarifying the vague ideas that are now entertained of the extent and character of the rise in prices, that has taken place since apprehensions were first felt regarding America's abandonment of the gold standard. The factors affecting the triangular exchanges between London, Paris and New York are intrinsically so complex and have been further complicated to such an extent by the activities of the currency authorities in the three respective countries that it would serve no useful purpose to analyse them here.

* * *

As for the rise in the price of gold in London from £5-19-7 on March 7th to £6-2-2½d., our readers, we presume, have followed our observations in successive weeks in our "Finance Abroad" section. The price of gold in London is naturally determined, in the first place, by the sterling-franc exchange. A development of recent origin and of peculiar significance is the persistence of a premium on gold in the London market which at one time went as high as 8 to 10d. and stood up to 3½d. during Air Mail week. That buyers of gold in London have been prepared to pay premium on the metal is rather the indication of the anxiety of foreigners to keep their holdings in London in the form of gold rather than an index of the extent to which sterling has depreciated in terms of gold. So that it follows that the changes in the sterling price of gold have comparatively little relation to the phenomenon which it is useful to examine in relation to the question of automatic revival.

* * *

The position of silver is different. The recent rise in pices has been solely on the strength of the campaign conducted by influential sections in America in favour of the re-suscitation of the white metal through the initiative of the Government of the United States. The famous farm Bill containtd a provision authorising the Government to accept silver in part payment of the war debt instalment. And what was even more significant, the United States have been trying, might and main, to secure international support for the improvement of the price and status of silver through various means, and mainly through a cessation of the sales of the metal by the Government of India and by the expansion of the demand for coinage purposes.

* * *

It is the rise in the price of stocks and commodities that is of direct importance to the question whether the forces that have kept down prices during the last three years have now spent themselves and whether we are on the eve of a revival made possible by the readjustment of factors. We believe few would question the fact that the impetus to the whole movement of prices during the last three months has come from the devaluation of the dollar in America and the authorisation of the President for embarking on a wide inflationary programme for the United States. A careful perusal of our "Overseas" columns would have shown that America had all along been prepared for, and anxious to, discount the inflationary movement. The commodity markets had not been slow to interpret the decided leanings of the Administration towards inflation. The stock markets had begun to hum qith life before hardly any proposal had been shaped either by the Government or by any party in Congress. In Europe, though the fears of devaluation of other currencies had been allayed by all competent authorities, investors were still nervous that their holdings might be depreciated in time by untoward movements. Paris witnessed a large-scale movement towards the conversion of funds into ownership of equities. In India, too, the principal staples have been closely connected with America either as enjoying a market in that country or as having competitive exporters there. The American developments, therefore, encouraged operators to take a more pronouncedly bullish view of the future trends. And it is a natural consequence that the industries which benefit by the higher commodity prices should also see their shares quoted at steadily increasing levels.

* * *

While the rise in prices may be accepted as considerable and as having derived their impetus from America, it must be recognised to be a different question whether it is such as is calculated to set the wheels of trade and industry on the move again. That the rise in prices is due less to an adjustment of supply to demand than to anticipations of inflation or actualities of currency depreciation detracts to some extent from their importance as a pointer towards revival. For both from the theoretical standpoint and from the standpoint of the average businessman and the trader what is important is not whether prices are at a higher level but whether there has been that proper relation between costs and selling prices which make for all-round remunerative activity. This is, indeed, a larger question which requires the gathering of a larger mass of material than is at present available. But the task has been essayed by the *Economist in* a series of three articles in the issues of May 6, May 13 and May 20 in which the changes in the prices of primary commodities, of manufactured articles and costs and fixed charges have been estimated. The Economist is inclined to the view that in all these respects, the readjustments, for the lack of which the depression started and grew in momentum, have taken place to a large extent, though by unspeakably painful processes. If this readjustment of costs and selling prices is taken in connection with the rise in commodity prices, the hope of a trade revival would seem to be more securely grounded. But it is easy to exaggerate the value of this revival to the masses of each country. There is still in some countries a surplus of productive capacity, the indefinite continuance of which would mean the utmost suffering to the people. Whether or not the cycle has turned, the question will still persist: Will the Governments be well-advised to trust to automatic recovery of trade for the resumption of prosperity?

SOUTH INDIAN RAILWAY COMPANY, LTD.

(Incorporated in England).

GENERAL STORES DEPARTMENT.

TENDERS are invited for the purchase of cast iron scrap pots available at the various stations of this Railway. For further particulars apply to the SUPERINTENDENT OF STORES, SOUTH INDIAN RAILWAY COMPANY, LIMITED, NEGAPATAM, remitting Re. 1/- per copy of the Tender Schedule.

Tenders are due by 3 p.m., on 26th june, 1933.

MORE PROTECTION TO COTTON.

As an example of rendering utmost kindness in a way that kills in the recipient all sense of gratitude, the Government's treatment of the Indian cotton mill industry affords most painful study. A hundred homely saying come to our minds as we contemplate the continuing phase of begging with more and more brass and giving with less and less grace. As our Bombay correspondent has pointed out, he gives twice, who gives quick. There is the old vernacular proverb which says that anything long is a snake. G. K. Gokhale was fond of saying that "Too Late" was writ large on the portals of the Imperial Secretariat. The sum and substance of all of which is that, if the Government had given, at a much earlier time, a moiety of what has now been given, the Indian cotton mill industry of India would have been by this time in a flourishing condition; and it need not be driven to the unedifying position of a perennial supplicant. In contrast to the treatment meted out to the textile industry, it is worth while to study the action taken by the Government towards the sugar industry. For all practical purposes, there was but a small beginning of a sugar industry in India till a few years ago. To encourage the rise and growth of sugar manufacture in a country, which was not producing a tenth of its requirements, the Government, once they made up their minds to afford protection, straight-away decided on giving, in one big slice, the amplest protection possible or necessary. The Indian sugar industry is now behind a tariff wall which is of the order of 200 per cent. duty on the Java cost of sugar. If to protect an industry that was barely in existence, if in the case of an industry which, at the time, was able to cope with barely a tenth of the Indian demand, if with the object of helping a broad-based industry to grow in such fashion and to such an extent as to result in India becoming self-contained for sugar, the Government were prepared to impose import duties to the extent of 200 per cent. why should there have

been any hesitation to take an equally strong and decisive measure in the case of an industry which has proved its worth, in which considerable capital has been sunk, which has been responsible for the growth of a number of auxiliary industries and trades and which has reached the stage of being able to cater to nearly 75 per cent. of the country's needs? If protection, once decided upon, had been given in adequate measure and in a final form neither would the Bombay industry be encouraged to sue for more and more, nor would a country like Japan have occasion for feeling irritated. Holland has not issued any ultimatum to India against the heavy duties on Java sugar, because the way in which the tariffs were imposed was not calculated to irritate Holland. If Japan feels raw in the matter, it is not because of the excessive duty but because of the way in which the duty has been enhanced from time to time and because no secret has been made of the fact that all this manoeuvre was specially directed against Japan. If there had been a clearer understanding of the essentials of this matter; if there had been lesser wire-pullings from extraneous interests; if our authorities had as independent a footing on this topic as they had in regard to sugar; if, that is to say, the ghost of Lancashire and the India Office was not haunting our authorities all the time, the Indian textile industry would have received justice long ago and it would have received justice in a manner that need not have occasioned, and would not have occasioned, the rancour in the minds of the Japanese.

* * *

There is another important matter to which it is time that Government's attention is drawn. The Tariff Board has made its report on the Indian mill industry. It has been before the Government for nearly six months. Why is the Commerce Member sitting on that report? Why has not the report been issued to the public? Even if there should be delay on the part of the Government to make up their minds, there is no justification for withholding the publication of the report. Is there any likelihood of this subject being taken up at least in the autumn session of the Assembly? Or will the report be shelved? What is all this mystery about? We are most particular that there should be no delay in the issue of this report as, under present circumstances, the industrialists are having their requirements attended to, though tardily, but the consumer could have his interests understood only after the public know what the Tariff Board has to say about it. We have good reasons to think that this report contains a lot of plain-speaking about the management of cotton mills, the vagaries of managing agency system, the relation of protection to consumer, and the efficiency attained in our mills. We have given protection to the steel industry, to the sugar industry, to the cotton mill industry and a good many others. But there has not been the same emphasis laid on the reciprocal obligations of the industries concerned. At the time when the renewal of protection comes up, each of the industries in question puts up elaborate memoranda; and the specially appointed publicity experts try to secure public support. And the public forgets all about it till the renewal time comes again. This is not at all satisfactory. Where any industry is granted protection, it is imperative and essential that there should be devised suitable machinery for enforcing certain obligations on the part of the respective industries. These obligations are, in large part, connected with treatment of labour, interests of consumers, facilities for apprentices, economical management, and absence of whimsicalities and vagaries on the part of those in charge of affairs. It is our considered opinion that the industries that have been granted protection have deserved protection not because their record has been wholesome in any of the details we have mentioned above, but because the Indian public are now peculiarly susceptible to any movement calculated to make India more and more industrially self-contained. The time has arrived when a more rigorous scrutiny of credentials must be insisted upon. We belive that the Tariff Board report on the textile industry lays down the broad principles to be kept in view for such a scrutiny. It is for this reason that we, while supporting the protection now afforded, also do insist that the report should be issued so as to enable the public to know and understand what reciprocal obligation they are to expect and compel from the millowners.

A Commerce Department notification issued on this question states :—

In exercise of the powers conferred by sub-section (5) of section 3 of the Indian Tariff Act, 1894 (VIII of 1894) and in supersession of the notification of the Government of India in the Department of Commerce No. 341-T (164) dated the 30th August, 1932, as amended by Notification No. 341-T (5) 33 dated the 31st March, 1933, the Governor-General-in-Council is pleased to increose the duty chargeable under Part VII of the Second Schedule to the said Act on the articles specified in the annexed table to the extent set forth therein.

Article with number of entry in part VII of the second schedule under which duty is chargeable	Present Rate of duty.	Increased Rate.
Cotton Piece—goods (other than tents of not more than nine yards in length)—(A) Plain grey that is not bleached or dyed in the piece, if imported in pieces, which either are without woven headings or contain any length of more than nine yards which is not divided by transverse woven heading.—Not of British manufacture.	$5\frac{1}{4}$ as. per lb.	$6\frac{1}{2}$ as. per lb.
(B) Others—Not of British manufacture.	50 per cent.	75 per cent.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,

THE LESSON OF PERSIAN OIL.

The recent history of the Persian oil industry has a lesson for all subject nationalities. Living in a subject country in which every social object has suffered the chilly aloofness of a foreign government, we are in a better position to appraise the achievement of the Persian Government in regard to the oil industry. Here is an industry of immense and pecuniary and political value, in the grip of foreign vested interests, who have always had behind them the powerful backing of a first-rate world power. The rights were secured to them by a hoary agreement concluded by the same infallible means by which the go- ahead Westerner has gained every manner of power among the backward peoples of the East. Whatever might have been the origin of the so-called contract between Persia and the Anglo-Persian Oil Company, all accepted international law was unquestionably on the side of the foreign vested interests. Negotiations should, clearly have been futile, unless there was in the background the capacity for an appeal to arms. But there was no mistaking the event of any armed dispute between a third-rate power like Persia and the mighty British Empire. In such circumstances, it would have been futile for any country to aspire to secure for itself the revision of an old contract. But it is to the undying credit of the Persian Government that they dared to challenge the legal right of the Persian Government and the might of the British Empire in an effort to secure justice for its nationals. The action of the Persian Government in terminating the Persian oil concessions on the sole ground that the Government leased out the oil fields was not a national government and was susceptible to outside influence and pressure was naturally considered by a bewildered world as an act of rashness which might ultimately result even in a positive setback. And the event has proved that who dares must win. The presence of a national government, truly solicitous of the interests of the people and anxious to strain every nerve to further them, is apparently the only condition of success in such efforts. Even if the British oil interests have not shown themselves accommodating to the just demands of the Persian Government it is not impossible that the latter should make conditions altogether impossible for the Anglo Persian Oil Company. Even if the old agreement has stood substantially unchanged, it was in the power of the Persian Government to stick to the letter of the agreement and at the same time prevent the company from operating with profit to themselves.

* * *

We are sure that the possibility of prolonged friction and the consequent loss to the Company in money and goodwill had induced them to give unto the Persian demand with a grace and alacrity for which no one will grudge them their due meed of praise. The Persian Government have had even more than perhaps, they had hoped for when they terminated the concessions. The area to be tapped has been reduced to a half of what it has been till now. The revenue has been stabilised by making it independent of the actual profits. The Government have been accorded a claim on profits over a certain level. Stringent provisions were incorporated in the new agreement for the increased Persianisation of the services in the company. The obligation has also been laid on the company for affording facilities to Persian nationals for training in foreign countries and in the actual processes of production of oil. It has also been stipulated that oil shall be sold within Persian territory at the lowest of world prices, namely those in Roumania. The Company is not free to sell its rights to others except with the consent of the Persian Government. That is to say, the rights of the Company are not a vendible commodity. And in the event of the Company being liquidated, its property shall pass to the Persian Government. That so small a nation as Persia has prevailed over so great a power as Great Britain shows what a national government can do for its country. One cannot in this context help reflecting the puerility of the demand for safeguards which has been made with such self-assurance by the same British commercial interests in India. We recollect that over a news telegram relating to the debts owed by Soviet Russia to Great Britain, a naughty sub-editor of a local Indian daily gave the catchy though provoking, heading "Go and get it." A similar remark in regard to safeguards for British industry, one can barely repress in one's mind.

Market Reviews (Contd.).

MADRAS GROUNDNUTS.

(From Our Correspondent).

Madras, May 31.

Arrivals are again showing a tendency to decline due partly to the depletion of stocks in certain districts and partly to the holding movement among rich middlemen and ryots in anticipation of a further rise in the market.

The very low stock position in Europe coupled with the advance of commodity prices in America have, in a large measure, contributed to a sharp rise in groundnut values. Business was concluded on the London market at £11-8-9 for Coromandel Machined, June/July shipments, c.i.f. North Continental ports, pure basis terms. Sellers have since raised their quotations to £11-17-6 for June and July shipments for Coromandel Machined. Shippers have increased their buying limits to Rs. 29 and Rs. 29-8 for Machined and to Rs. 27 and Rs. 27-8 for Ordinary per French Candy of 531 lbs., ex-coast godowns. The tone of the market is bullish and sellers are holding firm for better prices. The demand from Burma for kernels continues unabated and shipments from Madras and coast ports to Rangoon total 1,000 tons weekly.

The groundnut oil market has risen again in sympathy with kernel prices.

Arrivals of groundnut kernels into Madras for the week ended May 27, amounted to 88,868 bags or 6,998 tons against 103,018 bags or 8,112 tons in the preceding week and 10,108 bags or 795 tons at the corresponding week of last year. The export of groundnut kernels from the Madras Presidency during April, 1933, amounted to 15,789 tons against 26,000 tons in April, 1932 and 47,113 tons in April, 1931. Groundnut shipments from the Madras Presidency for the first four months of the current year totalled 150,042 tons against 159,768 tons for the same period last year and 229,923 tons for the corresponding period of 1931. The quantity shipped this year is the lowest since 1927.

Clive Street Gossip

I dictate to-day's gossip from a sick bed. That is the fun and hardship of a professional journalist's job—especially if he happens to be responsible for any "feature"—the more especially if the "feature" has come to engage the interest of advertisers. Whether I am on land or sea, whether I am well or ill, whether I am in good or sullen mood, I must do my ordained work lest four good and discerning advertisers should be displeased. They have paid me the compliment—I thank them most heartily—of locating their ads. roundabout my section; and the best way of my returning the compliment is a due observance of regularity. There are certain horses which are so worn out that it is the two shafts on either side that keep them up. It is the four advertisers that sustain the inspiration of Eavesdropper in worn-out moments like these. One must needs be grateful for all those happenings that act as an incentive or spur to work. And, so, everyone is happy. The Proprietor of the paper is happy that his revenue is kept up. The Manager is pleased that his advertisers are kept in good humour. The Editor is pleased that Eavesdropper suffers no longer from vagaries and fits of idleness. More than everyone else, I feel vastly buked up that I have a value even on the sick bed.

* * *

When I keep thinking matters over, I have often wondered how many men there are to whom an illness is a costly form of holiday. I simply cannot afford to fall ill. Apart from this particular "feature"—which is credited to me as my "star" performance—I have heaps of other work to do at this particular moment. My plan for the Industries Supplement is complete; and but for this ill-timed illness, I should have kept my word with my readers and brought out the Supplement this mid-week. Where I should have, in becoming pride, presented to the public a yet new and interesting instalment in the expansion of Indian Finance, I have to urge an apology for tardy performance of promise. On this topic I have had quite an excited argument with Armes, to whom much of the credit for the income side of the Supplement is due. He was not worried about my illness so much as about the Supplement being put off by the illness. And the first thing he asked me was this: What are you going to say about this delay? I should say I replied, that a sudden attack of flu was responsible for the unavoidable postponment of the date of the issue of the Supplement to next week. Frankly, Armes did not like it. He argued that no journal of standing should be run on a basis in which the illness of any member, however important he might be, should stand in the way of regular work being done in a regular way. I admit that Armes is quite right in his own way. But the simple mistake he makes is that the Industries Supplement is not yet a regular feature. Once it has become a routine affair like the weekly issues; that is, once the mid-week supplements are as permanent a feature as the week-end numbers, then, the Supplements could well come out irrespective of climatic or health or other conditions. I am most particular that in inaugurating this new programme of mid-week supplements, I should make a good start, relying on the trusty old saying that well begun is half done. On behalf of Armes and myself, I wish to express our regrets to all the advertisers in the Supplement and to assure them that what they have lost in delay, we will try to make up for by making the Supplement a thundering good thing.

* * *

If I cannot afford to fall ill, I hate to be ill even more because I hate medicines. Despite my Bohemian habits, which, as usual, consist of irregular dining, unbalanced wining and late hours, I manage to keep a thorough sturdiness of health thanks to the strict observance of three golden principles of health: (1) eat only when you feel hungry; (2) never drink greedily; and (3) whatever the time you get to bed, be sure of six hours' sleep. I am proof to most illnesses because of my adherence to my own rules of health conduct. But influenza is not an illness. It is an epidemic. You cannot resist it. It takes you off your feet. It catches you, so to say, unawares. It knows you at your weakest point and hits you before you know what it is all about. It is the cat that imports the flu to the house—the cat with the cold. (I do not use 'cat' in any metaphorical sense. I mean just the ordinary domestic animal which we all know as a cat). Well, this cat with a cold gets busy about the kitchen, trying to find out which jug of milk has been left with the lid open. From the cat the cook gets it. From the cook to everyone else in the house is an easy and intelligible transference. That is how half my household is down with flu. The stalwarts in the other half are all falling down, one by one. To-day's additions to the sick list are two. By the time we have done with the flu, Frank Ross should be able to make enough money to declare a dividend. Meantime, however, I have been averse to medicines and putting my faith in two simple recipes. Besmear yourself and your clothes with Eucalyptus oil, and have a gargle every hour with a solution of potassium permanganate. A handy chemical, that.

* * *

With the best will in the world, we cannot do aught of brain work with flu because the locality where that "will" is situate gets first benumbed. One has, all the time, a feeling that a small hillock is kept over his head with a good few scorpions and things to sting him all over the rest of his anatomy. That is how I feel at the moment. I do wish I were feeling better for I must deal, in happy and fulsome style, on the Birthday Honours List which contains

an unusually large number of our favourites. On this question of seasonal distinction showered twice in the year, mine is a curious attitude. If I could, I would do away with this system of periodical conferment of titles. There is far more sense in the policy of countries like U.S.A. and Canada where all men are equal because the Government in power cannot make them higher. Oftener than not, titles lead to snobbery. I have also known instances where these empty baubles have been a positive embarassment to their holders. I have known men who have wasted quite a small fortune in their eager pursuit of one or other of these mysterious symbols.

I am told that in some Native States in Rajputana, the Ruling Chief makes quite a substantial revenue by the conferment of honours. If a *Sett* is to enjoy the privileges of wearing a gold bangle on the leg, he will have to pay Rs. 1 lakh to the Prince. Gold bangles on both legs would cost Rs. 2 lakhs. (No reduction in price for increased quantities). I can understand some such system as this. But in British India, the Government do not have any monetary gain from this transaction. On the other hand, by including in the list of honours men with whom the world would never think of associating the word 'honour', the Government have put themselves, in such cases, in a far from enviable position. The position of conferring patronage and distributing honours has its priveleges; it has also its penalties. So long as the distributor of these gifts confines himself to the officials, he cannot go far wrong. But when it comes to non-officials, then, the embarassment of unhappy choice and the sorry figure one should cut for such a choice should be a nightmare haunting the authorities in charge of this irksome task for at least a month prior to the fateful day. On the present occasion, however, I need not dilate on this sombre side of honours. For, so long as the system of seasonal decorations is there, one should feel happy if one's friends, who will be made happy by honours, are being made happy by being honoured. I am in that position.

I rejoice at the K.C.I.E. conferred on the Hon'ble Mr. Shanmukham Chetty, the President of the Legislative Assembly. I believe that he should be, so far, the youngest in this order. The Knighthood conferred on Mr. Naoroji B. Saklatvala is in the extreme fitness of things. In fact, if Sir Dorab Tata had tried, it would have been easy for him to have become a Baronet. And in the usual order, Mr. Saklatvala would have succeeded Sir Dorab. The head of the Tata house has been a Knight for a generation—a Knight in the literal and metaphorical sense. I am, therefore, happy that Sir Naoroji has been fully equipped for his impressive role. Sir Kenneth MacDonald should have got his Knighthood at least two years ago. In fact, I congratulated him, in advance, fully two years ago. It is poor consolation that it is better late than never; for, it could never have been a case of 'never' so far as Sir Kenneth is concerned. He is one of the most outstanding bankers trained in the traditions of the Bengal circle and to Sir Kenneth and Lady MacDonald I offer my sincerest felicitations. To Sir Hormusji Mehta and Lady Mehta, the honour would not be a matter of pride and joy to the same extent as it would be to their bright and boisterous children. Sir Homi, even without a Knighthood, went about as stately and dignified as if he were one; and Lady Mehta is too much of a philosopher to be unduly elated. But Mani and Russa and the others should be having quite a joyous and boisterous time at the Taj. I wish I were with them—and not nursing on illness here. Sir Bejoy Prasad Singh Roy has deserved his Knighthood, if for nothing else, at least for the strong attitude he took on the question of joint electorates in the local bodies. To Mr. E. C. Mieville, C.S.I., I offer my congratulations in the full hope that the next one will not be long in coming. Dr. Meek, C.I.E., has earned his recognition; and I hope that the promise of improved economic statistics, about which Dr. Meek is so impatient will be fulfilled early by Sir George Schuster to the great satisfaction of the Director of Statistics and to the great comfort of those who are interested in the study of economics.

A. G. GRAY, Manager.

SIR KENNETH M. MACDONALD

FULL EFFORT: FULL VICTORY

That "false-hearted jade, Success" has ever smiled on Sir Kenneth MacDonald in all the stages of his career. Not that the false-hearted jade was not inclined to do all she could to justify her description. But Sir Kenneth left her no choice.

With Sir Kenneth, it has been a case of full effort, full victory. His dominant trait has been thoroughness, alround efficiency, energy, zest and intelligence in work—a blend of each one of these attributes in a just and proper proportion. At no time has he had any special god-father ; he has had no forced marches ; he has known no "double promotions" ; he has had no adventitious aid. Work done just as it should be—neither more nor less—has been his godfather and his kindly Providence.

He is an illustration of the good old saying but with an important modification ; he has proved that nothing succeeds like work. That is to say, whatever the work, it should be done in the way in which that particular work has got to be done. Also, whatever the work, every work demands that one should take it most seriously and perform it most conscientiously.

Ae he clomb the early rungs of the ladder, young MacDonald was not the one to keep looking at the clock; and to gather, as the clock struck five, the young-bloods round him and march off for a spree or gay evening. Completed unto the day must be the day's work. Relaxation comes from the thought that the day's full quota of duties has been worthily discharged. Rest is a mental attribute—and does not necessarily call for physical recreation. MacDonald has sought happiness and company and enjoyment in the work he has ever loved to do.

It is not mere mechanical qualities that are needed in the task that confronts one in his position. Initiative, which shows your capacity for individual thinking, planning and acting, and which, at the same time, reveals you as no obtrusive busybody or audacious personality, is a difficult *via media* to attain and maintain. Sir Kenneth has always displayed a real and well-balanced initiative.

As the agent of a mofussil branch at a "credit" centre, he knew that he had to woo, and make love to, all the men of means ; and he made sure that all the money there was about the place, found its way to the coffers of his Bank. As the Head at a "debit" centre, every trusty borrower was made to feel that no other Bank could extend like facilities ; and as for borrowers other than trusty, they could realise that here was a hard nut to crack. As Deputy Secretary, his was to play the second fiddle ; but he played it in perfect concord with, and to the perfect satisfaction of, the conductor of music.

As Secretary, he showed admirable skill in maintaining a close watch over the entire organisation ; he knew all that had to be known of the business possibilities and limitations of each centre ; he knew all businessmen all over the territory, their worth and the exact degree of their short-fall from full worth ; he knew his staff—officers and clerks—Europeans and Indians—especially those entertained on the basis of the Indian apprentice scheme. In all his dealings with clients or staff, he could be firm where needed but was always sympathetic and never failed to show genuine understanding.

As joint Managing Governor, he has given abundant proof of his aptness for team work. Division of labour but joint responsibility—this is the basis on which Sir Osborne Smith and Sir Kenneth MacDonald have worked together in friendly and fruitful co-operation.

The division of labour as between Sir Osborne and Sir Kenneth is, in broad terms, that the former looks after policy and the latter after administration. Not that there is any clear-cut demarcation of this nature. But it may be said that where consultation with the Government is involved or where the topics in question affect the money market or the banking world or the Imperial Bank's investments in their relation to giltedge conditions and the Treasury's borrowing programme, Sir Kenneth would, ordinarily, bow to the judgment of Sir Osborne. Where staff changes are involved or changes in staff rules are under discussion or recommendations of the three local circles on advances or loans are to be considered, Sir Kenneth is looked up to as the one having more intimate knowledge.

It has, thus, come to pass that Sir Osborne has more opportunities of contact with the Olympian Gods on the one hand and with the public on the other. The senior Managing Governor is thereby afforded more frequent occasions to be in the "limelight".

Both because of his self-allotted task imposing on him a place in the "shade" and because of the dazzling personality of Sir Osborne, the public in India have had no opportunity of appreciating how much the growing importance of the Imperial Bank is due to the happy team work of two men who admirably supplement each other. Here is no duplication. Here are two officials who are, individually, unlike each other but who, together, make up just the ideal combination.

Sir Kenneth is the enduring foundation, and Sir Osborne the flower and decoration, of the edifice. The one is intensive ; the other extensive. The one gives the Indian touch; the other supplies the international outlook. The one gets through his work, relying on painstaking labour and detailed knowledge ; the other relies on bigger vision and correct instinct. The one deals with facts ; the other with situations. The one wins your respect ; the other compels your awe. The one seeks to know all about you ; the other seeks to know you.

Bengal circle was responsible for producing a fine type of banker—a type, the outstanding traits of which were thorough knowledge of banking conditions in the entire territory ; capacity for hard, very hard work ; freedom from any racial or other bias whatsoever ; an attitude of mind which will judge each question on it own merits, without any prejudice or prediliction. Of this great race of great bankers, Sir Kenneth is almost the last. He is in the direct line of good and trusty men like Mr. Tallack and Mr. Mclure.

I have, on my part, a special reason for partiality for Tallack, Mclure and MacDonald. They were, as Secretaries, the best and most sincere godfathers of the young Indian lads taken as probationary assistants. Many of the "bandicoots" in the Bank were not favourably disposed towards the scheme. A sinister movement was afoot to damn it by passing adverse remarks on the probationers' work If all such conspiracy was defeated; and if the scheme has more than justified itself, it is due to the sympathy, tact and earnestness of men of goodwill like Sir Kenneth.

Sir Kenneth is the recipient of the warmest thanks of the scores of budding bankers, in the progressive consolidation of whose careers he has played so worthy a part. Were I Sir Kenneth, I would ask for no better reward, for no higher recognition.

"EAVESDROPPER".

OLYMPIA

"Flight" from Simla: Indian Officers Association's correct lead: Simla invaded by Committee of some sort: who pays?: Anyway, who cares?: yes, anyway, why not pay more?:

(From Our Correspondent).

Simla, 7th June.

Lady Willingdon is leaving this week end for Karachi and proceeds by the Imperial Air Ways on Wednesday the 14th instant for London where she arrives on 20th. The purpose of her visit is said to be "private" and she will no doubt utilise her time to the best possible advantage. Incidentally, her stay in London will prove to be a damper to the die-hard section in England which is out to kill even the White Paper proposals.

There are some in Simla who have spread the rumour that during her stay in England she might endeavour to obtain financial support for certain of her humanitarian schemes for the welfare of Indian subjects. The names of Lady Reading and Lady Hardinge are associated with two best-run hospitals for women and children at the headquarters of the Government of India. But there is no such institution bearing the name of Lady Willingdon! This fact has probably lent weight to the rumour that she might make definite progress with her scheme during her stay in England. Of course, no authoritative confirmation of this rumour will be forthcoming.

* * *

As for Lord Willingdon, he hopes to spend a short time with His Excellency the Nawab of Chattari at Naini Tal before proceeding to Kashmere for a fortnight in July. By that time Kashmere would have calmed down considerably after the present tension between the two sections of Muslims. There is just a possibility of His Excellency visiting Bombay early in August by which time Lady Willingdon will have returned from her literally flying visit to London. The Assembly session of course does not commence before the middle of 3rd week of August, and Their Excellencies would be back in Simla just a week before that.

* * *

Sir George Schuster always flings surprises on the public. When everybody had been made to believe—he himself was largely instrumental towards this belief—that he would not be going to England this summer, the news was let out that Sir George is proceeding by the next available boat to participate in the discussions on the Reserve Bank and Statutory Railway Board. This will be the fourth summer during his term as the Finance Member that Sir George will be visiting England, a record, rare as it is marvellous. What Sir George Schuster will do to promote the cause of India in financial and other matters time alone can say, but there is no gainsaying the fact that for the time being he has triumphed over Mr. Kisch of the India Office by managing to arrange for this fourth visit. Now

that Sir George is going to London for these two conferences on Indian affairs, he is also being advertised as the "official delegate from India" for the World Economic Conference. Thus Sir George has pulled his strings admirably, though of course at one time the odds were against him. The attitude which Sir George will take on behalf of India at the World Economic Conference will depend a good deal on the briefs which the Sub-Committee of the Viceroy's Executive Council will have prepared for him with the assistance of Dr. Meek, Director of Commercial Intelligence. The Sub-Committee has had several meetings on the basis of the agenda recently published and Sir George as a member of the Special Committee is fully posted with his briefs.

* * *

Sir T. Vijiyaraghavacharya left Simla today for Bombay. He sails for London per s. s. *Maldavia* along with Mr. Bhandari, President of the Indian Officers' Association. This Association has been asked to be represented by three witnesses at the joint Parliamentary Committee ; but the third witness is still unknown. There appears to have been some little hitch over the third person on communal grounds.

* * *

Both Sir Vijiyaraghavacharya and Mr. Bhandari will form an excellent pair and their record of official career justifies the belief that they will present the case of the Indian Officers' Association with skill and force. I understand a small memorandum is being prepared for presentation to the Joint Select Committee on the strength of which the witnesses would be heard. It is too early to speculate what its trend will be, but I am in a position to state that the witnesses will press for the services, whether European or Indian, to be under the control of the Governor-General, assisted by the Public Service Commission, instead of being under the control of the Secretary of State in London.

* * *

This suggestion is a great step forward in the direction of the control of the services being confined to India and is in accordance with the generally-expressed demand of the Indian political parties. And this suggestion while cutting at the root of the recommendation contained in the White Paper, keeps the services away from the political control of Ministers, by vesting it in the hands of the Governor-General who is the head of the administration. As, however, the Governor-General will be assisted in all matters pertaining to servicemen by the Public Service Commission, there is every chance of the serviceman feeling sure that his case will be heard.

* * *

The Indian Officers' Association was admitted by the Lee Commission to be the "most representative association". It is to be hoped that the views of this Association will meet with the approval of the Joint Select Committee and not be ignored as were the important points urged by it before the Lee Commission itself. After all, the Indian Officers in the various services, together with their European colleagues, are the mainstay of the administration in the department of justice, etc. and to ignore their just and reasonable claims while those of their European colleagues are generously considered, cannot possibly lead to their remaining contented or being able to render efficient service.

* * *

One of the points of which the Association will be justified in pressing for is the equality of the Indian Officers with their European colleagues by the removal of the differentiation introduced by the grant of Overseas Pay to the European members of the service and including it in the emoluments and treating it as part of average leave salary. But the most important point will be the complaint of the Association stressed before the Simon Commission that the pace of Indianisation in respect of what are called prize posts has not been in accordance with the pledge so often repeated in the Assembly and, what is more, the bringing in of specialists on short term contracts from England and later on absorbing them in the cadres of various services.

* * *

There are a dozen members of the Legislative Assembly now in Simla. They are being consulted by the Army Department regarding the revision of the rules governing the grant of pensions to disabled soldiers. The question was brought prominently in the Assembly by Mr. Azharali, whom the ballot-box had favoured in preference to a non-official member interested in the welfare of Indian soldiers. Mr. Tottenham, who is always suave and capable of disarming the opposition, agreed to consult a commitee of the members of the Assembly. It was, however, not a committee appointed by the Assembly.

* * *

A somewhat ticklish point arose as to which department should pay for this visit of the Assembly Members to Simla. The Assembly Department rightly stuck to its guns and the Army Department had to take over the expenses. Now a very interesting situation arose. Members of the Committee began to argue that if it is not a committee appointed by the Assembly the daily allowance should be more than Rs. 20/-. One of the members who is a back-bencher in the Assembly suggested Rs. 40/-, but others managed to hush him down. As for the Committee's proceedings, they are purely technical relating to the revision of the rules. The deliberations will last as long as the Members of the committee themselves desire, and as Simla is now cooler than the plains, surely there will be no hustling!

* * *

The visit of the Assembly Members has, however, proved of some interest in the discussion of political questions. Mahatma Gandhi's slow recuperation after the fast, it is believed, will result in the further postponing of the meeting of Congress leaders which was recently advertised to be held on the 10th of this month. But what will happen to the Civil Disobedience movement itself? Will it be definitely abandoned after the six weeks' interval or indefinitely suspended or will it be revived either as a mass movement or as individual resistance movement? These three alternatives form the subject of speculation in political circles in Simla ; and the hope is generally expressed that Gandhiji would serve the cause of the Congress right by adopting the second alternative, namely, indefinitely suspending the movement. Such a course, if adopted, will put the Government in the wrong because indefinite suspension amounts to abandonment, and Government will be brought to a point when a question of general amnesty can be pressed forward with greater ease. The attempts of Dr. Rabindranath Tagore, Pandit Malaviya, Mr. C. Y. Chintamani and other liberals to press for general amnesty on the ground of suspension of the movement will get an impetus by this suggested indefinite suspension of Civil Disobedience.

"HILLBIRD."

GATEWAY OF INDIA.

Bombay's propaganda yields results: New Alliances: New Complications.

Bombay, June 7.

For sheer excitability, Bombay beat Calcutta, a long while ago, by a good length. Time was when Bengal could be hysterical and teach hysterics to a dozen other provinces. What is the loss at your end is the gain at this. And we have not rested on our laurels. Every day, in every way, on every matter, we keep on improving our propagandist methods; for, the tangible token of excitement is propaganda.

Whatever we say is good for India is assuredly good for India, even if, incidentally, it is supremely and specially good for Bombay and her pet interest, the textile industry. Our propaganda to-day is, therefore, this: In all matters that pertain to national economy, follow Bombay's lead; for, Bombay is the only locality where knowledge and patriotism are in blend.

We were excited until this morning over the delay on the part of Sir Joseph Bhore in taking action against Japanese piecegoods. This morning's announcement of enhanced duties has given a quietus to this excitement. What next? But, really, what is the earthly use of this belated remedy? Has not the saying taught us that he gives twice who gives quick? Or, conversely, should not he who gives late give double? Now that the duties are levied only after considerable imports in anticipation of such a threat have been brought in, is it not reasonable to suggest that while an extra 25 per cent. should have sufficed three months ago, only 50 per cent. would answer the purpose to-day?

Herein is an indication of the future trend of propaganda from this centre. Even more striking results than before are now assured to our campaigns. All Indian commercial bodies are accustomed to see eye to eye with us. A good many European chambers (especially those in Cawnpore and Delhi) are in full sympathy with Bombay style and tenor of agitation. And, in this matter, Bombay and Lancashire are at one. The common enemy of all is Japan. The common interest of both is the Indian market. But when it comes to the details of that market, the patched-up friendship may be put to a severe test. However, sufficient unto the day, etc.

Meantime, Bombay millowners know that they are in good company—that is, in company of supplicants whose joint plaint ensures success. That is why the Millowners' Association, which has never been keen on the Federated Indian Chambers, has actively co-operated with the Employers' Association sponsored by the European group. The millowners know what friends they should make, when and how. They are ready for all kinds of alliances. They joined with the Swarajists to get their first footing in the Legislature. They have now allied themselves with Lancashire to rout Japan. What next?—I may ask again.

An unfortunate development out of all this is that, without either of them meaning it, Japan and Bombay have combined to the detriment of the Indian cotton-grower. In this chagrin against the cotton millowner, the Jap has issued an ultimatum to the innocent cotton-cultivator. Our cotton exports to Japan have been steadily going down. They were Rs. 21 crores in 1930-31; in 1932-33 they came down to Rs. 11.12 crores. This drop occurred while Japan's threat was yet a bluff. If she set about making good her threat, what will happen to India's cotton.

Indian mills are now flirting with cloths of finer texture. And, so, the coarse produce of the illiterates of Indian villages is not good enough for their purposes. Imports of foreign cotton have been rapidly mounting up; Rs. 6.39 crores in 1930-31; Rs. 7.03 crores in 1931-32; and Rs. 7.25 crores in 1932-33. The poor cultivator has at last found a friend in the Director of the Agricultural Department of the Bombay Government. In his report for 1931-32, he states the case of the much-neglected grower thus:

> "The Indian cotton mills have successfully achieved their object of securing protection against Japanese competition (other than dumping), through the passing of orders by the Government of India raising the duty of all non-British imported cotton goods from 25 to 50 per cent., *ad valorem* from August 31, 1932. Unfortunately Indian mills have been importing a huge quantity of foreign raw cotton; four lakhs of bales were imported into Bombay during 1931-32 while it is understood that about two lakhs of bales were imported through Bhavnagar, making six lakhs of bales in all. An import duty of 6 pies per lb. (about Rs. 25 per candy) was imposed upon raw cotton in September, 1931, by the Government of India Finance Act but *it is clear from these import figures that this duty is giving no protection to the Indian cotton grower.* Hence the question of raising this duty is receiving serious consideration. *It seems certain that much of this foreign cotton is displacing Indian grown cotton in the Indian mills; and this is perhaps the explanation of the fact that there were some 50,000 bales of cotton still unsold in mid-June, 1932, in the Surat area.*" (Italic is ours).

Why are our Indian millowners *swadeshi* so far as the sale of their products is concerned and *bideshi* so far as some part of their purchases is concerned? (Parenthetically, I may remark that few millowners themselves wear the cloth which they appeal to all patriotic Indians to buy). Going to finer counts is essential if Indian mills are to make some good showing in the competition. Finer counts of yarn mean finer cotton. Finer cotton means non-Indian cotton. In other words, a national industry can thrive only by diverting a portion of her custom to a non-national raw staple. Mr. R. G. Saraya (son-in-law of Sir Purshottamdas Thakurdas—one day, he will be as great a figure in cotton trade as his father-in-law) has furnished the following answer to the critics:

> "It is far better for India to import foreign cotton of longer staple and spin finer counts in her own mills than to import foreign cloth of finer quality. After all, the spinning of finer counts means employment of Indian capital and Indian labour".

This explanation would not convince the village-folk though the city-folk may see logic, force and reason in it. For, the village-folk understand only the hard logic of facts. If they find that Japan won't buy, Lancashire doesn't buy, and Bombay can't buy, where, then, could they sell their cotton? Where?—answers the Echo.

IMPORTANT STATISTICS ON INDO-JAPANESE TRADE.

GREAT HEADWAY IN MANY DIRECTIONS

MR. E. J. BUNBURY, the well-known businessman of Bombay, writes:—

The following is taken from the *Times* correspondent's telegram dated Tokyo, April 26, anent the abrogation of the Indo-Japanese Trade Agreement:

> "Japanese officials . . . . suggested that discussions might have been opened with Japan before terminating the agreement which had given India a favourable balance of trade with Japan every year until 1932 . . . The rapid extension and the large profits of the Indian Spinning Industry they argue, show little reason for prohibitive tariffs."

Since that was written we have seen reports of discussions entered into in England between Japanese and Lancashire trade representatives to consider the matter of quotas as between the two for the Indian trade. Exactly where India herself is to come in seems to be a little doubtful, and this blatant scramble for her corpse is an eloquent testimony to the temporary paralysis of the Government of India itself.

It is high time we lifted our eyes beyond our own domestic Textile interests, and looked at this matter from an All-India point of view. Taking first the Japanese plea that her trade with India has hitherto been reciprocal and up to 1932 showed a balance in India's favour. Here are the figures as given by the Government of India Sea Borne Trade and Navigation Statistics from 1929-30 to 1932-33.

JAPAN—INDIA TRADE BALANCE.

(In crores of Rs.)

	1932-3	1931-2	1930-31	1929-30
Imports from	20.50	13.34	14.52	23.59
Exports to ...	13.94	13.94	23.76	32.27
Balance ...	−6.56	+.60	+9.24	+8.68

(+Favourable to India).
(−Adverse to India).

The Japanese statement is literally correct, but a little closer examination will show that this general statement is no answer to the Indian contention that Japan has outrun the constable last year in spite of the additional duties imposed by India since September, 1931. The above figures demonstrate clearly that the balance of trade between India and Japan has suffered a sharp and substantial change since 1928-29, and perhaps the most interesting point of all is that whereas the balance of 60 lakhs in favour of India in 1931-32 has been turned into an adverse balance of 6.56 crores in 1932-33 entirely by increased imports from Japan, Indian exports have remained at exactly the same figure namely, 13.94 lakhs in both years. A further point to note is that with the sole exception of the U. K., Japan has achieved last year by far the largest favourable balance of trade with India of any country in the world.

I give below a list of the main commodities imported from Japan for each of the last two years in order to demonstrate the severity of her competition not only with what have been termed the less efficient Indian industries, but also with the most modern and efficient industries of Western countries.

IMPORTS FROM JAPAN INTO INDIA.

	1931-32.	1932-33.
Paints (Cwts.) ...	24,000	56,000
Cement (Tons) ...	28,000	39,000
Printing Paper (Cwts.) ...	400	2,000
Umbrella Fittings (Rs.) ...	9,75,000	13,32,000

IMPORTS FROM JAPAN INTO INDIA.

	1931-32.	1932-33.
Bicycle (Rs.) ...	11,74,000	19,11,000
Gas Filled Electric Bulbs (No.) ...	85,000	197,000
Vacuum Electric Bulbs (No.)	1,467,000	3,198,000
Electric Bulbs for Automobiles (No.) ...	369,000	1,542,000
Electric Bulbs for Torches (No.) ...	1,896,000	7,828,000
Hardware (Rs.) ...	15,76,000	30,11,000
Glassware (Rs.) ...	42,01,000	65,45,000
Earthenware & Porcelain (Rs.) ...	16,74,000	31,58,000
Piece-goods of Cotton & Art Silk (Yds.) ...	74,568,000	114,501,000
Cotton Twist & Yarn (Lbs.)	6,206,000	18,148,000
Wrought Yellow Metal (Cwts.) ...	39,000	95,000
Stationery (Rs.) ...	4,73,000	9,46,000
Hosiery (Rs.) ...	41,58,000	61,22,000
Raw Silk (Rs.) ...	1,58,000	4,71,000
Silk Yarn (Rs.) ...	5,08,000	40,35,000
Wool Piece-goods (Yds.)	1,21,000	1,412,000

Lastly I draw attention to the Japanese reference to the "large profits of the Indian spinning industry," I should be glad if our Japanese friends can substantiate that statement by facts and figures. The inference to be drawn from the above facts and figures is not that Japanese trade with India is in itself not to India's advantage, but rather that provided the balance is not unduly weighted against India there is every reason why the trade between the two countries should be mutually beneficial. This therefore points towards some arrangement between them to ensure that this condition is maintained. To-day the world has been invited by the U. S. Government to agree to a standstill arrangement on Tariffs pending the deliberations to be entered into at the forthcoming International Economic Conference to be held in London. That invitation has been accepted by several countries already, including Great Britain, but with certain reservations in the matter of freedom of action in respect of any matters which at the time the invitation was issued were already under review by Government. That reservation was obviously necessary and should be applicable also to India, because without it the standstill would be liable to work to the disadvantage of those nations which had not yet completed their defensive measures against foreign competition already affecting them.

It is of the utmost importance therefore that India should be adequately represented at the Economic Conference, and equally that India's freedom of action to complete her already belated measures of defence against Japanese competition should not be interfered with by reasons which may not be common ground between her and Great Britain. The latter has taken prompt and effective measures month by month by means of Treasury Orders to increase her duties whenever necessary for the protection of her industries. Let India see to it that she is allowed similar freedom of action to protect her nationals and that the Ottawa Agreements are not allowed to act as a brake on what is clearly necessary if her interests are not to suffer from considerations and influences which may be operating to her disadvantage.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN.

PESSIMISM *RE*: WORLD ECONOMIC CONFERENCE.

The approach of the World Economic Conference has apparently created more doubt and misgivings than hope or confidence. Time was, indeed, when even the fixation of a date seemed a great advance. Time was, too, when every joint statement of the statesmen of two different countries, however vaguely worded, was scanned with hopeful watchfulness. But as the day draws near, the public naturally focus attention on the discords and differences. "There has seldom, if ever," writes the *Financial News*, "been a big international conference prefaced with so much disagreement and so little preparation." In fact, the work of the Preparatory Committee has been actually undone to the extent that America has implicitly repudiated by far the most important of the Committee's recommendations. In Great Britain, there is growing resentment at the complacently sentimental attitude taken by the Premier towards matters of such vital importance to the well-being of the country and the rest of the world. In his Empire Day message, broadcast from Lossiemouth on Wednesday night, the Prime Minister had no better theme to expatiate on with his usual self-satisfaction than the continued influence and leadership of Britain in world affairs in the years now past. It is all well enough to utter a warning against allowing pessimism to find an easy way into out hearts. It is even better in these days, when Britain thinks herself erring on the side of self-depreciation, to expect the generation now growing up to feel not only the pride of a great inheritance but the knowledge of a great future. But the reference to Ottawa as a landmark on the road of our Commonwealth journey and the gratuitous offer of the doings in that city as an example to the economic international conference not only signify a lamentable vapidity of ideas but even portends virtual obstacles in the path of world recovery. The Chancellor of the Exchequer, who replied to the toast of the British Empire at the Empire Day luncheon given in London in the Canadian Chamber of Commerce in Great Britain, naturally, drew pointed attention to the increase in Canada's exports to the United Kingdom from $174 million in 1931-32 to $184 million in 1932-33. As usual it is left to Viscount Snowden to tear down unceremoniously the veil of unreasonable hopefulness with which the Conference has been shrouded. In a speech in the House of Lords on Wednesday, Viscount Snowden made a spirited onslaught on the Prime Minister for his failure to announce the Government's policy for the World Economic Conference. "I have had experience", he urged, "of at least four international economic conferences and the weakness of all of them has been the lack of adequate preparation and the lack of genuine agreement before the Conference meets."

Lord Snowden went straight for what the Premier has claimed as his notable achievement in Washington, the joint statement issued by him and President Roosevelt. He complained that the statement "adds nothing to the information upon these matters and it gives us not a glimmer of indication of the policy of the two countries". The fall in commodity prices, Lord Snowden maintained, was neither primary nor fundamental in the issue; because there are other causes and until those causes were removed, it was useles to attempt to deal with such quetions as exchange chaos. Turning to the reference in the statement of excessive tariffs, quotas and exchange restrictions etc., he declared: "Here we have excessive tariffs, quotas and exchange restrictions, a fundamental and primary cause of world depression, and it is dismissed in less space than the reference to the silver question. We have had no statement which seemed to indicate that the policy of the Government will be without any definite expression. There is not in the statement a single word about the American debt. It has been woefully bungled and mismanaged especially during the last year. President Roosevelt's gesture was a magnificent one; and it would have been of very great benefit if opportunities had been taken during the twelve months of the duration of the moratorium to come to a definite statement of this difficult question". Lord Snowden makes a correct diagnosis of the position when he says that the United States will not make a definite suggestion on debts until they see the outcome of the Disarmament Conference. "If America gets something out of the Conference then it is very likely that Mr. Roosevelt will have the courage to approach the Congress on the debts question and point out that America has gone by the reduction of armaments and proposed that that ought to offset a reduction of debts. Unless the Government go into the World Economic Conference with a clear-cut, well-thought out practical plan, we may at once abandon the whole hope of any practical or successful result of that Conference and know something of the problems which this Conference will have to face.

The pessimism expressed by Lord Snowden has found an echo in the comments of the financial press. The *Financial News* writing on May 22, points out that America, for her part, has implicitly rejected most of the recommendations contained in the report of the Preparatory Committee. She has refused to make any contribution to the matter of the War Debts. She has put grave obstacles in the way of currency stabilisation and latterly she has taught her radio millions that economic recovery is an isolated national problem. France will not urge any special policy, she is happy cultivating her own garden with her quotas to keep off the birds and she will only become more sociable if there is an attractive invitation. Germany and most of the smaller countries are interested more in their external debts. As for Britain, the *Financial News* urges, she is at present perhaps, a greater passive obstacle than any other. Some last minute changes in the Finance Bill have been forced on the Government by the emergence of an unexpectedly unanimous opposition. For some time, the House had been feeling depressed by the dull vigour of the budget and was inclined to frown even more decisively on Mr. Chamberlain's unsympathetic obduracy in regard to the serious criticism which was brought to bear on the proposed tax on fuel oils and the incidence of the new Income Tax Act on the working of the co-operative societies. About the former it may be said that it has nothing to recommend it, not even to the most bigoted protectionist, as the Economist rightly observes. It makes for a gratuitous increase in the cost of production of a large number of industries and hits with particular severity one of the most important industries, namely, Coastal Shipping. The second implies that co-operaive societies are to be charged to income tax in respect of all trading like other concerns but that the "divi" is to be treated as a trading expense. Whatever may be said of the lawfulness of taxing the reserves of co-operative societies, it is certain that the change is hardly expedient and is likely to raise a great deal of avoidable popularity for the Government. But as was pointed out already, Mr. Chamberlain showed himself peculiarly unsympathetic to the criticisms that poured from all sides of the house; and it was not till the middle of the week that the Chancellor of the Exchequer decided, after all, to make a concession on the duty of heavy oils. At first, the Chancellor led the house to believe that he was contemplating the reduction of half a penny, but when his speech was greeted with groans from various parts of the House, he blandly

Air Mail Week.

added "there is no use in haggling, I may as well go the whole hog." The clemency has now been extended to Coastal Shipping and pilot cutters and ships out on trial.

Another Trade Agreement.

The Government have added one more to the numerous trade agreements that have been signed recently. By the understanding now concluded with Iceland, about 77 per cent. of the imports of coal into that country will be obtained from the United Kingdom. Iceland undertakes that during the currency of the Agreement the import duties on certain classes of goods in which the United Kingdom is interested will not exceed the rates specified in a schedule of twenty classes of goods. Some of these rates include an *advalorem* duty ; at present this duty is 15 per cent. in all the cases mentioned, so that where the schedule specified ten per cent., this means a reduction. The principal goods on which Iceland duties will be reduced are piecegoods of cotton, linen and artificial silk. The United Kingdom undertakes not to increase the existing import duty of ten per cent. *advalorem* on fresh or salted fish imported from Iceland. The agreement is to come into force when the necessary legislation has been passed by the Icelandic Parliament, and will remain in force for at least three years after which it will be subject to six months' denunciation on either side.

UNITED STATES OF AMERICA.

EMERGENCE OF AMERICAN INSULARITY.

There is no knowing how the winds of American politics will blow. Till now it was a case of intense ardour for international politics and world economy, with President Roosevelt aspiring to play a more effective role in the world drama than his predecessor of the war period. Foreign statesmen hurried to Washington one after another to be closetted with the President or his advisers on matters of great moment. Not a day passed without some longish statement or other being issued by foreign statesmen with Mr. Roosevelt's signature as the common factor amongst them all. Only last week, Mr. Roosevelt issued an elaborate appeal to 44 nations breathing a lofty internationalism into the daily politics of each nation. But now early in the week, Professor Raymond Moley, who is perhaps the closest adviser of President Roosevelt, struck a discordant note and tried to create what may be called the economic counterpart of the famous Munroe Doctrine. Mr. Moley warned America against expecting too much from the World Economic Conference and said that "since world trade is only a small percentage of her total commerce a cure for our present ills lies within ourselves." Owing to the difficulties of tariff and exchange problems, he said, it should not be expected that the World Conference was itself going to lay out a plan for a series of international measures which would bring alleviation of economic difficulties all over the world. In making such a statement and trying to raise thereon the prejudices of the average American against any international sentiment, Prof. Moley is certainly on surer ground than Mr. Roosevelt. For it cannot be denied that the Administration has been no more alive to the realities of international economics than the ignorant the Middle Westerner. The foreign visitors to Washington, excepting perhaps Mr. Ramsay MacDonald, were more aware of this than probably the keenest observers in America itself. After his visit to White House, M. Herriot is reported to have observed that "he had never before heard so much nonsense talked in a single evening, ; and there can be no doubt that the ex-Premier of France had the sympathy of the other foreign representatives.

Internationalism Offers Resistance.

But again the winds were fickle. There was another surprising turn when President Roosevelt announced that he would soon submit a measure to the Congress authorising him to negotiate with foreign governments for the general lowering of tariffs. The announcement is valuable less for what it promises than for what it is supposed to indicate. The liberals in the country see in it an indication that the counsels of Mr. Cordell Hull, the Secretary of State, had prevailed over those of Prof. Raymond Moley. It is a sharp tie between these two advisers to the President. Mr. Hull has retained an unwavering faith in international co-operation while Prof. Moley has lately turned in favour of economic nationalism. That so soon after Mr. Moley's broadcast talk, Mr. Roosevelt should have decided to approach the Congress for authority to negotiate with foreign governments for the lowering of tariffs, is an unmistakable sign that the influence of the economic Munore is definitely on the wane.

American Attitude to Disarmament.

Another indication that the star of internationalism is not yet set is afforded by the declaration of Mr. Norman Davis in the Disarmament Conference at Geneva that America will support a consultative pact against aggression and accept the British disarmament plan. He said that the initiative by President Roosevelt was prompted by the pressing need for concerted and decisive action to solve the inter-related problems with which the two conferences, Disarmament and Economic, must deal. He added—"Failure here would be a setback to economic recovery. If we candidly face the situation there is no alternative for a sane world to consider. We cannot safely delay taking effective steps to reduce armaments to a purely defensive basis."

Mr. Davis' Statement.

The main points from the rest of Mr. Davis' speech may be summarised as follows :—

We are prepared to go as far as the other States in the way of reduction of armaments.

We feel that the ultimate objective should be to reduce armaments approximately to the level established by the Peace Treaties, *i.e.*, through successive stages to the level of a domestic police force.

We are prepared to join other nations in abolishing weapons of aggressive character.

We accept the British proposal wholeheartedly as a definite and excellent step towards the ultimate objective.

We are willing to consult with other States in case of a threat to peace, with a view to averting conflict.

In the event of the States in conference determining that a State has been guilty of a violation of its international obligations, and deciding to take measures against that State, then, if we concur in the judgment rendered as to the responsible party, we will refrain from any action tending to defeat such collective efforts which the States may make to restore peace.

We are prepared to participate in a system of supervision to ensure the faithful and effective carrying out of any measures of disarmament.

We are heartily in sympathy with the idea that effective means of automatic and continuous supervision should be found, whereby the nations will be able to rest assured that, as long as they respect their obligations with regard to armaments, the corresponding obligations of their neighbours will be carried out in the same scrupulous manner.

We must make up our minds to settle our disputes around a conference table instead of on the battlefield.

Air Mail Week.

We recognise the legitimate claims which any State has to safeguard its security, but this can best be achieved by controlled disarmament, by which the military strength is progressively reduced to a level such as provided in the Peace Treaty.

The American Delegation accepts the chapter on material, and hopes the other delegations will join in this acceptance.

This conference is not only a Disarmament Conference, it is an emergency conference of a world in a state of political uncertainly and economic depression.

Importance of Improved Business.

Despite the indications of a continued internationalist sentiment, it would be a mistake to suppose that public support could be indefinitely retained for the support of President Roosevelt's programme.

If the President is not to be overwhelmed by a revival of economic nationalism it would be necessary to engineer a genuine revival of trade. In the atmosphere of improved business it would then be possible for Mr. Roosevelt to enthuse congress and country over the programme that he has now on hand. The Government, it would seem, appreciates the decision fully ; and the week is important for the beginning in the inflationary programme. Inflation is not only advisable in the long view of things, but has become an immediate necessity. For, the week has seen a marked regress in the prices of stocks and commodities. If it is believed that, after all, revivalist sentiment is by no means strong or sure, it would be recognised that, if the present fall in prices were to remain unchecked, it might prove the starting point of another setback.

Open Marked Operations.

In this connection, it is pertinent to recall that the middle of 1932 was also a period of a startling rise in the prices of stocks and commodities not only in America but all over the world. It was then believed that the depression had neared its natural end and that the rise in prices, which was witnessed in the months of June and July, would prove to be the beginning of a sustained improvement in all departments of national and world economy. Such hopes were soon dashed before the third quarter of the year 1932. There is no reason to-day why a similar disappointment should not overtake the business world ; and regarding the position from the standpoint of the administration of America a setback would be not only an economic, but a political, misfortune. It would mean that the one man in world politics, who is at once willing, and able to bring about the programme of concerted international action for world recovery, has suffered an eclipse in the sphere of his own domestic politics. The cause of the World Economic Conference would suffer a setback from which it would take a long time to recover. Considerations like these have impelled the Administration not to delay execution of the inflationary measures authorised in the Farm Act that was recently passed. On May 22, the United States took the first active step in inflation when the Reserve Bank began its open market operations in an attempt to prevent further decline in the stock and commodity prices. Commodities have again been weak, wheat actually falling 2 cents per bushel and Wall Street was continuing the break of the two previous days. Though the action of the Reserve Bank at the time has been on a small scale, it is sufficient to show that the administration is determined to resist any further recession in prices by putting the new law into operation.

Prices in America.

It is heartening to think that the desired effect has been created. And it is equally encouraging to recall that in spite of their present weakness commodity prices have risen considerably since last month in anticipation of inflation. The index of wholesale prices published by the Department of Labour which covers 784 commodities weighted according to their importance and based on the average price for the year 1926 stood at 62.6 in December. By February it had fallen to 59.8, on April 15 it stood at 60.3 ; and on May 15, it had reached 62.3. It is not unreasonable to assume that with the first decisive check to the recent fall in prices and with such unmistakable signs of the Administration's determination to persist in the inflationary policy, the level of prices will be taken up higher and higher.

More Signs of Recovery.

The action of the Federal reserve authorities has given a new significance to the additional signs of recovery that are now visible. This optimism has some foundation in reality for steel production is at its highest level in two years. The Chairman of the Reconstruction Finance Corporation has announced that applications for loans have decreased and the liquidation of loans have increased during the past two years. The value of loans actually repaid is reported to be 500 million dollars. Another good sign noted by the Chairman is that the previously closed banks are re-opening at an average rate of 125 per week.

Dr. Sprague and Equalisation Fund.

While the outlook of prices and the state of industry remain encouraging, it is regrettable that the position of the exchanges should continue to be as hazy and threatening as ever. On Tuesday, May 23, it was announced that Dr. O. M. W. Sprague, Economic Adviser to the Bank of England, has been appointed as Financial Adviser to the United States Government. Dr. Sprague will, in this capacity, be adviser to the United States Delegation at the World Conference. This is bound to be received with great satisfaction in City circles in London where Dr. Sprague has made many friends since he resigned his Professorship of Banking and Finance at Harvard in 1930 and joined the Bank of England as its Economic and Statistical Adviser. His function at the Bank was to act as a kind of *liaison* officer between the Bank of England and the Federal Reserve Bank of New York ; but later when Governor Strong died and England abandoned the gold standard and the monetary relations between the two countries assumed a different aspect, Dr. Sprague's sphere of activity and influence tended to widen. It is believed both in London and in New York, that his present appointment foreshadows the announcement of the creation of an Exchange Equalisation Fund in America. Though, doubtless, Dr. Sprague's influence will be cast on the side of an agreement between the two countries as regards the level of the cross rate, it is certain that a period of tuzzle between the two funds, the British and the American, will have to ensue before an agreed plan could be arrived at.

FRANCE.

LUKEWARMNESS TO WORLD CONFERENCE.

Scepticism reigns in France in regard to the World Economic Conference. The opinion is widely held that everything, that has happened during the last two months, is calculated to increase French lukewarmness. Formerly, the French idea of international agreement for revival was, firstly, to secure the return of the deserters to the gold standard and then to build thereon agreement in regard to other outstanding questions. But France had never any

doubt that the stabilisation of the currencies and the exchanges was the indispensable beginning of all revivalist attempts. She had thought that the combined pressure of America and France, such as was exerted in the initial stages of the meeting of the Preparatory Committee, would ultimately succeed in persuading Great Britain to return to gold. But now that America has light-heartedly thrown overboard the gold standard, it is felt that there is a formidable Anglo-Saxon opposition to all sincere attempts at revival. It is emphasised in all sections of the French Press that the real question to be tackled are war debts and exchange stabilisation. But they are questions to be decided by three powers, namely, France, Great Britain and the United States ; and the presence of the representatives of 66 nations of the world will hinder, rather than help, the attainment of any definite and useful results. It is possible, therefore, that the Conference will have to encounter a disconcertingly chilly attitude on the part of the French delegation. Considering that America has, during the last one or two months, done more to prejudice the prospects of the Conference than any other nation and that Great Britain has not only refused to come to an agreement regarding the exchange, but has also whittled down Mr. Roosevelt's formula for tariff truce and has been assiduously adding to the innumerable trade barriers now existing in the world, it would be unreasonable to accuse France of petty-minded opposition to the wider interests of the world at large.

The Budget Bill.

The Senate completed its debate on the Budget Bill by adopting the measure as a whole in the form in which it left the Chamber. It may be useful to point out that the Senate has reduced the expenditure from 50 milliards to 49 milliards and revenue from 45.9 milliards to 45.6 milliards. In the result, the deficit has been brought down by the action of the Senate from 4·08 milliards to 3.49 milliards. Even at this figure, it is clearly 200 million more than what might be considered tolerable according to the lax standards that may be admissible in this critical period. The Senate Finance Committee, it will be remembered, proposed that, inasmuch as it is difficult to balance the budget during this year, the deficit should at least be equivalent to the amount of debt extinction which will be accomplished during the year. The latter figure may be put at 2,300 million francs. And the Committee had, in pursuance of this opinion, made definite suggestions which would reduce the deficit to well within this limit. But the Senate has not found its way to accept the proposals of the Committee in this regard ; and much of the difference may be attributed to the rejection of the Finance Committee's proposal that the 800 francs of annual pension to remarried war widows might be suppressed.

Foreign Trade.

"Foreign trade continues to shrink. The returns for April indicate total exports of 1,502 million francs (against 1,618 million francs in the previous month and 1,742 million francs in April last year), and imports of 2,427 million francs, against 2,605 million francs in the previous month and 2,813 million francs in April, 1932). The decline, however, was larger in imports, the month's adverse balance being only 926 million francs, as compared with deficits of from 1,087 million francs to 1,114 million francs in each of the previous three months. The total adverse balance during the first four months of the year was 4,168 million francs, against 3,134 million francs in the corresponding period of last year). Imports in the four months showed an increase over the corresponding period of last year of 40 million francs in entries of foreign foodstuffs and 410 million francs (or 9 per cent.) in raw materials, while entries of foreign manufactured goods declined by 381 million francs, or about 18 per cent. Exports of foodstuffs were 236 million francs, or over 23 per cent. smaller, of raw materials 230 million francs (or 13 per cent.) and of manufactured goods 500 million francs (or 11¼ per cent.). Import tonnage during the four months was about 3½ per cent. larger than during the corresponding period of 1932, while export tonnage was about ½ per cent. better.

Tourist Traffic.

Official figures issued by the *Office National du Tourisme* indicate the serious losses in tourist traffic which France suffered last year. The total of foreign visitors to the country, which amounted to 1,911,107 in 1929, fell back from 1,542,285 in 1931 to 944,358 in 1932. British tourists to France, which were 881,000 in 1929, 850,000 in 1930 and 870,000 in 1931, dropped to 522,000 last year ; Americans from 296,174 in 1929 to 205,320 in 1931 and 143,208 in 1932 ; and Spaniards from 350,000 in 1929 to 120,000 last year. The severest drop was in visitors from the South American Republics who numbered 150,000 in 1929 and only 20,250 last year. The shortage of agricultural labour in France is to be noted from the fact that although there are still 300,000 workers in receipt of unemployment allowances and foreign recruited labour has been under reduction at the rate of around 1,000 units weekly for many months past, 2,944 foreign labourers entered the country during the week ending April 12, of whom 2,797 were allocated to agriculture." (The *Economist*).

CANADA.

BETTER ECONOMIC CONDITIONS.

During the past week the clouds of the world-wide business depression have continued to lift in Canada, and trade has followed the upward trend of basic indices in the United States. The Stock markets have again shown resiliency ; prices are slightly firmer.

Reuter says the recent developments have increased public confidence in the economic situation. Unemployment has been considerably reduced because of an increase in building and construction operations. There are initial prospects of at least fair crops of grain and other agricultural products, as spring seedings and pasture conditions are comparatively favourable. Commodity prices are gradually rising, and many factories in different parts of Canada are resuming normal operations.

In Western Canada spring seeding has practically been completed in Manitoba ; it is, however, reported to be backward in Saskatchewan and Alberta, owing to heavy rain and cool weather, but these factors ensure generally good subsoil moisture for germination and the first month's growth.

Wheat export prices were erratic, but closed on Saturday a half cent to a cent per bushel higher, so that there has been a fairly steady rise for the past seven weeks, prices showing an increase of about 30 per cent., since the upward movement began in the latter part of March.

Treaty with France.

The signing of a new trade treaty between France and Canada and its presentation to Parliament for ratification has been one of the outstanding events of the past week. The treaty will undoubtedly be ratified before Parliament is prorogued.

Canada will materially benefit from larger exports to France of wheat, tinned salmon, furs, pulp for

making artificial silk, fresh fruit, &c. France will benefit from the reductions in import duties and intermediate tariff rates on a long list of manufactured articles, including wearing apparel, certain tinned goods, medicinal preparations and periodicals. Over 200 items are affected.

Satisfactory crop conditions.

Conditions in the grain areas of western Canada are on the whole satisfactory, according to the cabled reports of agents of the Canadian National Railways. In some districts work has been delayed by rain lasting 30 to 40 hours. In most areas seeding has continued at full swing, and in a few favoured localities earlier sown wheat is now above ground. Growth is slow, and warmer weather would be beneficial.

Southern Manitoba reports excellent conditions, and it is stated that seeding never before proceeded under better circumstances. In northern Manitoba, rainfall is needed to overcome soil drift.

Seeding operations in southern Saskatchewan were delayed by heavy rains, but conditions generally are satisfactory. In northern Saskatchewan seeding is well under way. Rains in Alberta delayed seeding, with a probable decrease in acreage, but generally conditions are good.

Cattle prices are slightly weaker, and in the hog markets prospects are unsettled, with the likelihood of a rise in price.

PERSIAN OIL AGREEMENT

The following accounts (appearing in the Financial News) of some of the details of the agreement between the Persian Government not covered in our Editorial article of May 20 will be read with interest:—

The new agreement consists of a preamble and 27 articles.

Headings of Agreements.

The chief headings are:—

(1) Subject of the Concession.
(2) Area.
(3) Pipe lines.
(4) Company's activities in Persia.
(5) Lands required by the company.
(6) Exemption from Customs duties.
(7) Freedom from sale of foreign exchange.
(8) Royalties.
(9) Government taxes.
(10) Transfer of company's properties to the Persian Government, on termination of the Concession.
(11) Personnel.
(12) Persian Government representative.
(13) Company's undertaking to exploit oil in Kermanshah district.
(14) Non-cancellation by the Persian Government and non-failure of the company to execute its engagements.
(15) The company's right to surrender the Concession.
(16) Arbitration.
(17) Contracts.
(18) Settlement outstanding past Government demands.
(19) Date of enforcement.

Two Royalties from output and Income.

Royalty will be of two kinds, one from oil produced, and the other from net income. Royalty from oil exploited has been arranged at 4s. per ton on oil exported or sold internally.

Royalty from net income is calculated thus: Five per cent. of the net revenue to shareholders. Of the sum available for Ordinary dividends in excess of the first five per cent., one-fifth is payable to the Persian Government.

Further, arrangements have been made for payments as follows: During the first 30 years the company will pay the following taxes to the Government in consideration for complete exemption from all other taxation:—

During the first fifteen of the thirty years the company will pay on all oil extracted up to 6,000,000 tons, 9d. per ton, and 6d. per ton for any oil extracted above the 6,000,000 mark. The minimum royalty for the first fifteen years will be £225,000. During the second fifteen years the company will pay 1s. per ton on the first 6,000,000 tons extracted, and 9d. per ton after that, the total to be paid to be not less than £300,000.

The second thirty years will not be decided at present, but a new figure will be arrived at when the time comes.

Area Limitation.

The Persian Government, in the new agreement, has limited the area of the concession to 200,000 square miles until 1938, when the area will be further reduced to 100,000 square miles. The area is marked on a plan signed by both parties. The area is about half that allowed under the D'Arcy Concession.

The Persian Government is entitled to cancel the Concession only in two cases: (1) When the Board of Arbitration provided for in the new agreement issues a decree in favour of the Persian Government with which the company fails to comply. (2) If the company goes into liquidation.

If the company ever wishes to cancel the new Concession it must give the Persian Government two years' notice, after which, when the cancellation is effected, all properties of the company will pass into the hands of the Persian Government.

Previously, the company had exclusive rights over pipe-lines. Now, under the new agreement, certain rights are reserved to the Persian Government.

Selling Prices: New Basis Adopted.

A new basis for selling prices has been adopted; that is, to take the cheapest world petrol markets, such as Roumania and the Gulf of Mexico, and to fix the prices in Persia according to the prices of those countries.

The company has agreed to sell petrol in Persia at the rates it is sold in these two countries. In the case of Government consumption, a 25 per cent. reduction will be effected, and a 10 per cent. reduction in the case of the public when buying in Persia. These prices will not include transport charges, but will be ex-refinery prices. The Government undertakes not to export, and to prevent exportation of oil bought for such consumption.

All workmen must be Persian subjects; technicians also, as far as possible.

The company will pay annually £10,000 for the training of Persian students who are sent to England to study the petroleum industry. The selection of such students will be made by a representative of the Persian Government.

The Persian Government is entitled to inspect all operations of the company in Persia, all plans, and technical undertakings.

Government Representative.

The Government will choose a representative resident in London, who will be entitled to any inside information, and will be permitted to ask anything an ordinary shareholder would like to know.

Disputes are to be settled by arbitration. Each party is to choose a representative, and these two will choose a third, who must not be an Englishman nor a Persian. In the case where the third party is hard to find, the Secretary-General of the League of Nations will be asked to choose a representative.

INDIAN FINANCE
YEAR-BOOK 1933-34

TO BE READY IN LATTER PART OF JUNE

OUTSTANDING FEATURES:

1. A CONCISE AND COMPREHENSIVE REVIEW OF INDIA'S TRADE, BUDGET, FINANCE, BANKING, INSURANCE, TRANSPORT INDUSTRY AND AGRICULTURE.
2. LUCID EXPOSITIONS AND COMPARATIVE STATISTICS.
3. TEN YEAR FIGURES ARE GIVEN IN MOST CASES.
4. OVER 200 STATISTICAL TABLES.
5. WHERE NECESSARY, CORRESPONDING STATISTICS OF INTERNATIONAL VALUE ARE GIVEN.

THE "HINDU": Non-official enterprise has been able to achieve what the Government failed to do.

THE "TIMES OF INDIA": . . . . . A compilation which nobody . . . . . ought to miss.

THE "LEADER": Excellent book of reference and information.

THE "INDIAN REVIEW." A mine of information, statistical and historical.

THE "HINDUSTHAN REVIEW": . . . . . The politician and the journalist the legislator and the businessman, cannot prize too high.

THE "STATIST." An exhaustive review.

THE "INVESTORS' CHRONICLE". First compilation of its kind in India. No previous attempt has been made either by the Government or by private agency to bring into a single volume all available economic information and relevant economic statistics.

SIR OSBORNE SMITH: Astonishing production.

Sir R. N. MOOKERJEE: Remarkable achievement.

MR. G. D. BIRLA: Undoubtedly a compilation of very useful information.

SIR BASIL BLACKETT. There is hardly any financial or economic information regarding India which does not find some place in the volume.

J. SCHUMPTER: All the more, economists all over the world must be grateful to you.

Price Rs. 5 only.

To subscribers of "INDIAN FINANCE" Rs. 3 only.

Rs. 4 for extra copies to subscribers.

The Managing Editor,

"INDIAN FINANCE," 20, British Indian Street, CALCUTTA.

Sir,

I send herewith Rs..... for of "Indian Finance Year-Book" on the basis of concession allowed to subscribers.

Name.....

Address.....

Air Mail Week.

£1,000,000 Settlement Payments of the Company.

The company has agreed to pay:—

(1) A sum of £1,000,000 in settlement of all claims.

(2) The Government royalty for 1931-1932 to be calculated on the new agreement.

(3) For payment of income-tax for the past years, the company undertakes to pay a sum approximating £500,000.

Payments on Gold Basis.

To avoid difficulty due to fluctuations of the £ sterling, the company agrees to pay the Government on the gold basic value prevailing on the day of the signature of the new concession.

The concession has been granted for sixty years as from the day of the signing of the concession.

The chief negotiators were: His Highness Mohammad Ali Khan Foroughi, the Persian Minister for Foreign Affairs, His Excellency Taghi Zadeh, Minister of Finance, His Excellency Davar, Minister of Justice, and the four specialists who came specially from Europe to advise Persia.

On the other side, the main figures were: Sir John Cadman, chairman of the company, and Mr. Fraser, deputy-chairman, with advisors.

BULGARIA

A very serious state of affairs in the finances of Bulgaria was revealed when the League of Nations Financial Committee reported to the Council on March 26.

The Budget for this year, according to this report, shows a deficit of 1,300,000,000 leva (£2,600,000 at present rates), in addition to 1,500,000,000 leva (£3,000,000) arrears on payments to state officials and contractors, which the Government is unable to meet.

On th average, declares the Financial Committee, Bulgaria has been spending 110,000,000 leva (£220,000) a month more than it received.

The League Council took note of the plans formulated by the Bulgarian Government for restoring the finances of the country, and has authorised the Government to:

(1) Increase, from 600,000,000 leva to 1,100,000,000 leva, the issue of Treasury Bills. The normal limit of 600,000,000 leva was fixed by Article 9 of the Protocol of March 10, 1928.

And (2) Raise from 500,000,000 leva to 800,000,000 leva, for one year only, the special authority, previously granted, to issue Treasury Bills.

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

Details.

The aggregate value of the foreign trade of Bombay, imports and exports, for the month of April, 1933. amounted to Rs. 11.66 crores, showing a fall of Rs. 78.61 lakhs or over 6 per cent., as compared with the figures for the corresponding month of the previous year but a rise of Rs. 2.07 crores, or over 21 per cent., as compared with those for April, 1931. The fall of Rs. 78.61 lakhs is due to smaller arrivals of both mechandise and treasure. Exports of Indian produce and gold showed an improvement.

Imports of merchandise were valued at Rs. 4.17 crores, showing a fall of Rs. 2.39 crores or over 36 per cent. from the figures for April, 1932 and of Rs. 1.21 crores or over 22 per cent. from those for April, 1931. The fall of Rs. 2.39 crores is mainly due to smaller arrivals of raw cotton (−19,689 tons and −Rs. 1.74 crores), kerosene oil (—over 3,500,000 gallons and —over 28.21 lakhs), artificial silk yarn (—over three-quarter million lb. and −Rs. 10.03 lakhs), cotton twist and yarn (—over three-quarter million lb. and −Rs. 10.01 lakhs), aniline dyes (−Rs. 9.6 lakhs), cotton piecegoods, grey and coloured (—nearly 3 and one-eighth million yards and −Rs. 8.82 lakhs), paper and paste board (−Rs. 6.02 lakhs), metals, iron and steel (−Rs. 4.42 lakhs), silk raw (−Rs. 2.36 lakhs) and other manufactures of cotton (−Rs. 2.25 lakhs).

On the other hand increases were recorded under sugar (+8.791 tons and +Rs. 7.62 lakhs), motor cars including motor wagons, cycles and parts (+Rs. 3.52 lakhs), precious stones and pearls, unset (+2.85 lakhs) and machinery and millwork (+Rs. 2.14 lakhs).

Imports of gold amounted to Rs. 3.97 lakhs as against Rs. 7.88 lakhs in April, 1932 and Rs. 8.65 lakhs in April, 1931, and those of silver to Rs. 1.07 lakhs as against Rs. 8.81 lakhs and Rs. 25.85 lakhs respectively.

The total collections of import duty amounted to Rs. 1,17,86,003 (of which Rs. 14,53,957 represented duty on articles of luxury) as against Rs. 1,29,18,989 in April, 1932, and Rs. 1,34,95,069 in March, 1933.

Exports of Indian produce were valued at Rs. 2.75 crores showing an improvement of Rs. 1.43 crores or 109 per cent. as compared with the figures for April, 1932, but a fall of Rs. 85.65 lakhs or nearly 2 per cent. as compared with those for April, 1931. The improvement of Rs. 1.43 crores is almost entirely due to larger shipments of raw cotton (+24,434 tons and +Rs. 1.43 crore). There were noticeable increases in the shipments of Myrabollams (+Rs. 2.8 lakhs) and raw wool (+nearly one-half million lb. and +Rs. 1,63 lakhs). On the other hand noticeable decreases were recorded under grain, pulse and flour (−2,211 tons and −Rs. 3.67 lakhs), hides and skins—raw and tanned (−Rs. 2.48 lakhs) and seeds (−Rs. 1.38 lakhs though the quantity shipped was larger by 2,264 tons).

Exports of gold were valued at Rs. 4.54 crores against Rs. 4.23 crores in April, 1932, and nil in April, 1931 and those of silver at Rs. 5,942 against Rs. 51,405 and nil respectively.

Re-exports of foreign merchandise declined by Rs. 1.4 lakhs and Rs. 10.51 lakhs, respectively, to Rs. 14.98 lakhs.

BALANCE OF TRADE.

India's visible balance of trade in merchandise and treasure during the month of April, 1931, 1932 and 1933, is shown in the following table. The figures are arrived at by combining the balances of transactions in (1) private merchandise and (2) treasure (private account). The balance of remittances of funds is also shown with details at the end of this table. In these balances the sign plus (+) indicates net export and minus (−) net import.

	Month of April 1930. Rs. (lakhs).	1931. Rs. (lakhs).	1932. Rs. (lakhs).
Exports of Indian merchandise (private) ...	+13,65	+10,44	+10,20
Re-exports of Foreign merchandise (private) ...	+42	+28	+22
Imports of Foreign merchandise (private) ...	−12,44a	−13,18a	−9,68a
Balance of trade in merchandise (private) ...	+1,63	−2,46	+74
Gold (private)*	−16	+4,12	+4,49
Silver (private)*	−44	−4	−4
Currency Notes (private) ...	...	...	+2
Balance of transactions in treasure (private)*	−62	+4,08	+4,47
Total visible balance of trade ...	+1,01	+1,62	+5,21
Council Bills, purchases of Sterling and other Government remittances to the United Kingdom (*b*)	...	−1,25	−3,55

Transfers of Government Securities	−1	−1	+2,49
Interest Drafts on India in respect of Government of India Securities ...	−6	−6	−5
Balance of remittances of funds	−7	−1,32	−1,11

*These exclude transactions which do not enter into the balance of trade.

(*a*) Exclusive of the value of Railway materials (Rs. 12 lakhs, Rs. 4 lakhs and Rs. 1 lakh in the month of April, 1931, 1932 and 1933, respectively), imported direct by State Railways working under Company management which was not paid for in the ordinary way and not, therefore, taken into account in arriving at the balance of trade.

(*b*) This head includes, in addition to Council Bills, (1) Sterling purchases in India and (2) payments in India to Local Bodies, etc., against proceeds of sterling loans floated by them in London and taken over by the Secretary of State.

CLEARING HOUSE RETURNS.

The amount passed through the Clearing House Department of the Imperial Bank of India for the week up to June 2, was Rs. 14,97,44,696-14-0.

BOMBAY TELEPHONE COMPANY, LTD.

		Cash and other balances ...	36,805
Total ...	39,87,659	Total ...	39,87,659

Extracts from Directors' Report:

The report covers the year ended 31st March, 1933. The year's working resulted in a profit of Rs. 1,54,902-9-9, which, with the sum of Rs. 72,997-5-0 brought forward from the previous year, makes a total of Rs. 2,27,899-14-9. An interim dividend on the preference shares has been paid absorbing Rs. 29,400. Rs. 50,000 has been transferred from Dividend Equalisation account, leaving a balance of Rs. 2,48,500 at the credit of Profit and Loss account. The directors recommend that this should be disposed of as follows: preferential dividend at 7½ per cent. (making 10 per cent. for the year), free of income-tax, Rs. 88,200. Ordinary dividend at 20 per cent. or Rs. 2 per share free of Income-tax, Rs. 84,000, carry forward to next year's account Rs. 72,299-14-0.

Jute has been taken into account at less than cost price and goods in stock and process at valuation. In accordance with the Indian Jute Mills short time Agreement, the Mill worked 40 hours per week, during the period covered by these accounts.

HUKUMCHAND JUTE MILLS.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	67,96,337	Block (net) ...	1,33,87,968
Debentures ...	31,12,675	Stores ...	1,87,337

Profit ...	2,22,999	Investments ...	6,66,422
		Cash balance ...	5,12,034
Total ...	2,01,35,984	Total ...	2,01,35,984

Extracts from Directors' Report:

The directors of the Hukumchand Jute Mills submit the audited accounts of the company for the half-year ended March 31, 1933, showing a profit on account of Rs. 5,63,386. After deducting Rs. 3,15,361 for interest, debenture interest, commissions and sundry adjustments, including the debit balance of Rs. 25,114 brought forward from last half-year, there remains a sum of Rs. 2,22,999 at credit of the profit and loss account, which they recommend as follows:—Payment of dividend on 38,926 preference shares at Rs 3-8 per share (7 per cent. per annum) Rs. 1,36,241; leaving a balance at credit of Rs. 86,758 to be carried forward. They have transferred Rs. 4,00,000 from the reserve fund to provide depreciation for the current half-year. The purchase of the Belliaghatta Jute Mills was completed during the half-year and possession obtained from the vendor. The addition to block represents the installation and completion of new turbo-alternator of 4,000 kilowatts which was put into commission and is working satisfactorily. The prospects for the current half-year are favourable and sales have been made at good rates. In accordance with agreements entered into by all members of the Indian Jute Mills Association, the mills have worked forty hours per week during the period with fifteen per cent. of the total looms sealed up. This agreement will remain in force until June 30, 1933. Mr. Jugmohanprasad Goenka was appointed a director of the company in place of Rai Bahadur Badridas Goenka, C.I.E., resigned. Mr. C. H. Heape resigned his seat on the board on proceeding to England and Mr. J. S. Ker was asked to fill the vacancy.

NORTH-WESTERN CACHAR TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	7,00,000	Block (nett) ...	9,59,000
Reserve ...	5,00,000	Stores ...	25,435
Unpaid dividends	175	Tea sales receivable	1,06,096
Debts ...	28,883	Advance ...	5,598
Profit ...	85,739	Investments ...	1,24,427
		Cash and other balances ...	1,03,241
Total ...	13,14,797	Total ...	13,14,797

Extracts from Directors' Report:

The managing agents of the North-Western Cachar Tea Company (Messrs. Duncan Brothers and Company) submit the audited accounts for the year ended December 31, 1932, showing a profit of Rs. 72,198. On transfer of above to profit and loss there is at credit of that account Rs. 85,739. They propose to pay a dividend of 7½ per cent. and to carry forward the balance of Rs. 33,239. Hot and dry conditions in the early part of the year delayed the start of the flushing season. Some 700 maunds of tea were lost at both divisions owing to the combined effects of unfavourable weather, hail-storms and blight. Outturns of tea for the season and average selling prices compared with those of the previous year as follows:—Crops, 1932—Kurkoorie, 5,079 maunds; Bicrampore, 5,900 maunds. Average selling prices:—9 annas 4 pies; 5 annas. Crops, 1933—Kurkoorie, 5,326 maunds; Bicrampore, 5,710 maunds. Average selling prices:—4 annas 8 pies; 5 annas 2 pies. The total area under cultivation is 1,835½ acres being 946 acres at Kurkoorie and 889½ acres at Bicrampore. Of the former 12¾ acres are fallow, while the decrease in the latter is due to the abandonment of a further area of 55 acres considered to be unremunerative tea. Estimates for 1933 provide for a total crop of 12,350 maunds at a cost of Rs. 3,18,376 including inland freight and sale charges.

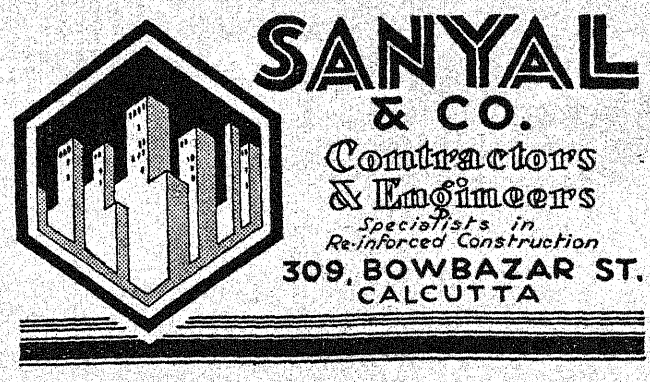
CLEVEDON TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	2,00,000	Block (nett) ...	2,00,000
Reserve ...	2,00,000	Stores ...	9,107
Debts ...	4,502	Outstandings ...	47,780
Profit ...	38,083	Advances ...	149
		Investments ...	99,816
		Cash and other balances ...	85,733
Total ...	4,42,585	Total ...	4,42,585

Extracts from Directors' Report:

The managing agents of the Clevedon Tea Company (Messrs. Duncan Brother and Company) submit the audited accounts for the year ended December 31, 1932. The result of the season's working is a profit of Rs. 23,242 which has been transferred to profit and loss account. After sundry adjustments there is a balance at credit of that account of Rs. 38,082. They recommend that a dividend of 10 per cent. be declared at the annual meeting leaving Rs. 18,082 to be carried forward. Crop weighed out at 4,643 maunds compared with 3,500 maunds estimated and 3,655 maunds in 1931. The average selling price was 4 annas 11 pies per pound as compared with 4 annas 10 pies in the previous year. Favourable weather was experienced throughout the season. The total area under cultivation remains at 50,642 acres. Estimates for 1933 provide for a crop of 3,500 maunds for an outlay of Rs. 78,585 including inland freight and sale charges.



PHASKOWA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,50,000	Block	...	2,30,000
Reserve	...	1,00,000	Crop A/c.	...	20,713
Debts	...	2,971	Outlay	...	10,057
Profit & Loss	...	1,757	Outstandings	...	5,996
			Cash & Invests.	...	87,962
Total	...	3,54,728	Total	...	3,54,728

Extracts from Directors' Report:

Report for the year ended 31st December, 1932.

The result of the season's working is a loss of Rs. 8,682-3-4 which has been transferred to Profit and Loss Account. After sundry adjustments including the appropriation of Rs. 5,000 from the Reserve Fund, there is a balance at credit of that account of Rs. 1,757-0-4.

A further fall in the market and the short crop harvested are responsible for the disappointing result.

Crop weighed out at 1,936 mds. as compared with 2,200 mds. estimated and 1,735 mds. in 1931. A severe drought in the spring for the second year in succession, and excessive rain when the monsoon broke curtailed the crop.

The average selling price was 5 annas compared with 5 annas 8 pies in the previous year.

Planted area remains at 390 acres.

Estimates for 1933 provide for a crop of 2,200 mds, at an outlay of Rs. 58,470 including Inland Freight and Sale Charges.

GOHPUR TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	3,38,000	Block (nett)	...	6,87,611
Debentures	...	3,87,000	Season 1933	...	11,347

Debts	...	16,626	Advances	...	1,236
Drafts against shipment	...	42,046	Tea sales in suspense	...	1,02,245
			Investments	...	5,183
			Cash and other balance	...	511
			Loss	...	41,343
Total Rs.	...	8,51,665	Total Rs.	...	8,51,665

Extracts from Director's Report:

Report for the year ended 31st December, 1932.

Crop and Sales.—The following are comparative statistics of outturn and sales for the past three years:—

Year.	Crop.	Sale Average.
1932 ...	349,793 lbs.	... Re. 0/ 8/ 3¼ per lb.
1931 ...	385,835 ,,	... ,, 0/ 8/10½ ,, ,,
1930 ...	330,245 ,,	... ,, 0/10/10 ,, ,,

Season's Working.—From the undernoted it will be observed the season's working resulted in a loss of Rs. 11,784-4-7.

Receipts Rs. 1,81,115-13-7, Expenditure Rs. 1,92,900-2-2, loss Rs. 11,784-4-7.

Profit and Loss Account.—After adjustment and transferring the above loss this Account shows a balance at debit of Rs. 41,343-0-11, which is being carried forward.

BRUSHWARE, LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	90,000	Block (net)	..	52,755
Reserve	...	1,00,000	Stock-in-Trade	...	72,671
Debts	...	74,942	Stores & Spares	...	42,092
			Outstandings	...	47,650
			Cash & Invests.	...	4,871
			Profit & Loss	...	44,903
Total	...	2,64,942	Total	...	2,64,942

Extracts from Directors' Report:

Accounts for the year ended 31st March, 1933, show a profit for the year after providing for Commission, Taxes and Depreciation of Rs. 17,747-14-9. This sum has been carried to Profit and Loss Account which now shows a debit balance of Rs. 44,903-6-6.

Sales of Brushware shows a small improvement.

London market continues to be restricted, a small profit was earned on the shipments made during the year.

The Managing Agents have foregone Rs. 500 per mensem of their allowance and the Directors have drawn no fees during the year.

OODALEAH, LIMITED.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	2,00,000	Block (nett)	...	1,81,756
Debentures	...	56,490	Stores	...	2,880
Loans	...	91,666	Tea sales outstandings	...	23,573
Debts	...	2,593	Cash balance	...	651
			Loss	...	1,41,889
Total	...	3,50,749	Total	...	3,50,749

Extracts from Director's Report:

The managing agents of the Oodaleah, Limited (Messrs. Kilburn and Company), submit the audited accounts for the year ended December 31, 1932. Outturn for the season was 2,330 maunds 43 pounds as compared with an estimated crop of 2,500 maunds and 2,336 maunds 36 pounds manufactured in 1931. Climatic conditions throughout the greater part of the season were unfavourable for growth and rainfall was unevenly distributed, resulting in the growth of leaf being retarded. Fortunately, conditions improved during the latter months of the year when the major portion of the crop lost in the earlier months of the season was recovered. Of the crop 1,500 maunds 18 pounds were shipped for sale on the London market and the remainder was sold in Calcutta. The average for the whole season is equivalent to 4.650 annas nett per pound as compared with 4.964 annas realised in 1931. They regret to report that the result of the season's working is a loss of Rs. 6,617 which, with the adjustment of the 1931 accounts, brings the amount at debit of profit and loss account to Rs. 1,41,880. Estimates for the current season are for a crop of 2,500 manuds at an expenditure of Rs. 68,699, excluding commission to manager and interest charges. This company has, however, agreed to participate in the proposed restriction scheme and the above estimate is, therefore, subject to modification of crop being agreed to by the industry.

TELOIJAN TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,98,000	Block (nett)	..	5,32,999
Loans	...	89,092	Stores	...	14,120
Unpaid dividends		780	Outstandings	...	50,585
Debts	...	11,194	Advances	...	1,138
			Suspense	...	33
			Cash balance	...	11,489
			Loss	...	88,702
Total	...	6,99,066	Total	...	6,99,066

Extracts from Directors' Report:

The directors of the Teloijan Tea Company submit their report and audited statement of accounts for the year ended December 31, 1932. The season's working shows a loss on revenue account of Rs. 35,261. After allowing for staff provident fund, there remains a sum of Rs. 88,702 at debit of profit and loss account to be carried forward. The crop weighed out at 4,590 maunds against an estimate of 5,000 maunds and was disposed of at an average price of 5.82 annas per pound in Calcutta and 9.09d. per pound in London. Climatic conditions throughout the year were favourable. Teas of a satisfactory quality were made and the reduced sale prices were entirely due to the depressed state of the market. The estimate provides for a crop of 4,226 maunds which, it is calculated, will be allowed under the restriction scheme at a total cost of Rs. 1,65,056, which is the equivalent of 7.81 annas per pound. Mr. B. C. Studd retires by rotation but, being eligible, offers himself for re-election. Mr. R. A. Towler, having returned from England, resumed his seat on the board.

RUTEMA TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities		Rs.	Assets		Rs.
Capital	...	2,50,000	Block (nett)	...	2,76,090
Reserves	...	2,27,178	Stores	...	14,125
Unpaid dividends		75	Outstandings	...	69,410
Debts	...	18,708	Advances	...	1,090
			Suspense	...	35
			Investments	...	18,450
			Cash balance	...	6,847
			Loss	...	1,14,914
Total	...	4,95,961	Total	...	4,95,961

Extracts from Directors' Report:

The directors of the Rutema Tea Company submit their report and audited statement of accounts for the year ended December 31, 1932. The season's working resulted in a loss on revenue account of Rs. 48,136. After making provision for staff provident fund, there remains a balance of Rs. 1,14,914 at debit of profit and loss account to be carried forward. The crop weighed out at Ruthna division, 3,878 maunds 57 pounds; Rema division, 4,675 maunds 68 pounds; and realised an average of Ruthna division, 4.21 annas per pound; Rema division, 4.37 annas per pound. The estimates for the ensuing season have been prepared as follows:—Ruthna division, crop 3,826 maunds at 5,136 annas per pound; Rema division, crop 3,800 maunds at 5.37 annas per pound.

BORMAH JAN TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	4,02,000	Block (nett)	...	5,63,409
Debentures	...	1,14,000	Stores	...	14,436
Reserves	...	3,350	Outstandings	...	49,163
Loans	...	3,12,159	Advances	...	2,056
Debts	...	24,236	Suspense	...	41
			Cash balance	...	8,445
			Loss	...	2,18,195
Total	...	8,55,745	Total	...	8,55,745

Extracts from Director's Report:

The directors of the Bormah Jan Tea Company submit their report and audited statement of accounts for the year ended December 31, 1932. The result of the season's working shows a loss of Rs. 55,966 on revenue account, to which must be added Rs. 9,654 on account of debenture interest and staff provident fund together with Rs. 1,52,575 brought forward from last year, making a total of Rs. 2,18,195 at the debit of profit and loss account to be carried forward. The crop weighed out at 2,829 maunds 42 pounds and was sold partly in Calcutta at an average of 5.23 annas per pound and partly in London at an average of 9.14d. per pound. Good quality teas were produced throughout the season and the poor prices realised are due to the low rates ruling for tea during 1932. The reduction in crop was mainly due to adverse weather conditions at the commencement of the year and more careful plucking. The estimates provide for a crop of 3,013 maunds at an expenditure of Rs. 1,15,236. In order to assist the company through difficult times the debentureholders have agreed to forego their interest and the agents their entire remuneration for the year 1933.

ADAMJEE JUTE MILLS.

Synopsis of Balance Sheet:

Extracts from Directors' Report:

Report covers the half-year ended 31st March, 1933.

The Revenue Account, after deduction of Interest, Insurance, Commission and other expenditure, shows a profit of Rs. 1,36,802-6-1; adding the amount carried forward from last half-year Rs. 3,843-13 and the amount received from the Insurance Company as Claim Rs. 5,000, the total is Rs. 1,45,646-3-1.

From this sum there has to be deducted Depreciation for the half-year Rs. 99,868-15-6, leaving an available balance of Rs. 45,777-3-7, which we recommend should be dealt with as follows: For payment of Dividend on 7½ per cent. Cumulative Preference Shares at Rs. 3-12 per Share for the half-year ending 31st March, 1933, free of Income-tax, Rs. 43,875; to be carried forward to next period Rs. 1,902-3-7, total Rs. 45,777-3-7.

The trade depression mentioned in our last report continued all through the period under review. Our Mill is working 54 hours per week under the terms of an agreement with the Indian Jute Mills Association as has been done by other non-associated Mills. The prospects for the coming period appear to be bright in view of improved trade conditions.

MANIPUR TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.

Debts	...	4,630	Stocks	...	18,592
			Outstandings	...	985
			Advances	...	1,226
			Crop account	...	2,830
			Loss	...	17,142
Total	...	4,66,806	Total	...	4,66,806

Extracts from Directors' Report:

The managing agents of the Manipur Tea Company (Messrs. Gillanders Arbuthnot & Company) submit their report and statements of audited accounts for the year 1932.

An extension of 46.50 acres was put out and at December 31, the area under tea was 546.5 acres. A 10-acre block of seed area has been adandoned since and the area under tea is, therefore, reduced to 536.5 acres. A crop of nearly 933 maunds was realised which compared with 748 maunds made in 1931. The market continued extremely unfavourable and the average price realised was 5 annas 8 pies per pound as compared with 5 nanas per pound in 1931. A portion of the crop was disposed of privately in India and abroad. The total expenditure for the season amounted to Rs. 82,202 including sale charges and the result of the season's working is a loss on revenue acount of Rs. 54,479 which is transferred to profit and loss account. This sum with the adverse balance of Rs. 2,31,743 brought forward from 1931, and Rs. 920 added for contribution to the employees' provident fund brings the total at debit of profit and loss account to Rs. 2,87,142. The sum of Rs. 2,70,000 at credit of reserve account has been appropriated to profit and loss account which now shows a debit balance of Rs. 17,142 which is carried forward. The Industry has adopted voluntarily a scheme of restriction but in view of the flood of 1929 representations have been made for special treatment excluding the company from the operation of the scheme and the result is onxiously awaited. The estimate will be prepared accordingly.

PATNA ELECTRIC SUPPLY CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	15,91,210	Block (nett)	...	19,75,590
Reserves	...	1,56,580	Stores & Spares	...	61,040
Debts	...	3,23,037	Outstandings	...	2,09,334
Profit & Loss	...	2,09,941	Cash	...	34,304
Total	...	22,80,768	Total	...	22,80,768

Extracts from Directors' Report:

Report the year ended 31st December, 1932.

Accounts.—The Revenue Account shows a profit of Rs. 2,60,717-3-0 as compared with Rs. 2,35,343-2-9 for the previous year. After deducting:—Managing Agents' Commission Rs. 13,035-13-9, Chief Engineer's Commission Rs. 10,428-11, Income Tax, Super Tax and Surcharge Rs. 47,301-15, total Rs. 70,766-7-9, there is a nett profit of Rs. 1,89,950-11-3, which, when added to the balance of Rs. 19,990-5 brought forward from the previous year, leaves a balance of Rs. 2,09,941-0-3 at credit of Profit and Loss Account.

The Directors recommend that the balance at credit of Profit and Loss Account should be disposed of as follows:—Pay a dividend of 6 per cent. for the year 1932 Rs. 95,472-9-7, Transfer to Power House Conversion to Steam Account Rs. 1,00,000, carry forward Rs. 14,468-6-8, total Rs. 2,09,941-0-3.

A sum of Rs. 1,00,000 was appropriated out of the profits of the year 1931 and carried to General Reserve with the intention of making part provision for the loss which the Company would incur on the installation of steam-driven plant and it is now proposed that this sum be transferred to Power House Conversion to Steam Account. This transfer and the appropriation of Rs. 1,00,000 out of the profits for the year 1932 referred to in the foregoing paragraph will leave a balance of Rs. 53,251-6-10 to be carried forward at the debit of Power House Conversion to Steam Account.

General.—The steam generating station has operated successfully during the year and the supply of electricity has been satisfactorily maintained. The Advisory Board appointed by Government in 1932 recommended a reduction in the maximum rates which the Company had power to charge under its license and by Government Order the maximum rates chargeable by the Company were reduced with effect from 1st October—the principal reduction being in the case of the supply to domestic consumers for which the maximum rate chargeable per unit is now 4½ annas.

The rebate of one anna per unit, which had been allowed to domestic consumers for prompt payment of energy bills, was, in consequence of Government action referred to, withdrawn from the date the reduced rates took effect.

The Directors have disposed of the Oil Engin Plant which was rendered surplus on the conversion of the old generating station to a steam-driven station as follows:—To The Tinnevelly-Tuticorin Electric Supply Co., Ltd., a portion of the plant for Rs. 2,59,672 and to The Mangalore Electric Supply Co., Ltd., the balance of the plant for Rs. 1,56,649.

The number of consumers connected to the Company's mains at the close of the year was, 1,683 as compared with 1,599 at the close of the previous year.

BURMA CORPN., LD.

Report relates to the quarter ended 31st March, 1933.

Development.

SEARSOLE COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.		Rs.	Assets.		Rs.
Capital	...	5,00,000	Block (nett)	...	2,16,789
Debts	...	16,796	Coal	...	785
			Stores & Spares	...	6,892
			Outstandings	...	29,841
			Cash & Deposits	...	52,109
			Profit & Loss	...	2,10,380
Total	...	5,16,796	Total	...	5,16,796

Extracts from Directors' Report:

Report covers the year ended 31st January, 1933.

The Revenue Account for the period under review discloses a debit balance of Rs. 5,477-11-9 and after transferring this sum to Profit and Loss Account the debit balance to be carried forward amounts to Rs. 2,10,379-9-7.

During the period no amount has been written off on account of Depreciation.

Since the publication of our last Accounts prices for all Coals have fallen very severely and we regret that there is no indication of any improvement taking place in the near future.

During the latter part of the year raisings were unfortunately restricted owing to labour difficulties. These have since been surmounted and as we have succeeded in reducing the Colliery cost materially, if nothing unforeseen occurs, we hope that the Colliery will be able to carry on even at the low prices now prevailing, without incurring further loss on Revenue Account.

THE EVER READY CO. (GREAT BRITAIN), LD.

The Directors reported the continued expansion of the Company's business and sales for the year ended 31st March, 1933, increased 24 per cent. This is extremely praiseworthy in view of the various reductions in the prices of the Company's products.

During the year the Company increased its issued capital from £742,800 to £857,610 by the issue of a further 434,240 Ordinary Shares of 5 shillings each, which were all taken up by the Shareholders.

Notwithstanding the increased capital, dividends as in the past were maintained. Preference Shareholders received the maximum 10 per cent. for the year and Ordinary Shareholders received 35 per cent. for the year. This Ordinary dividend of 35 per cent. has been paid for each of the last 7 years and proves the stability of the Company and the quality of its products which command greater support and confidence than ever.

Reserves and Carry Forward have risen from £694,120 last year, to £771,691 this year.

DARJEELING CONSOLIDATED TEA CO., LD.

Owing to exceptionally unfavourable weather the outturn for 1932, at 858,506 lb. fell far short of the estimate and was the smallest crop obtained in recent years. The average price realized was 15.82d. per lb. (against 17.79d.). The accounts show a profit of £2,481 (against £14,002). No dividend is recommended on the Ordinary shares (against 15 per cent.), and after providing for the Preference payments the balance carried forward is reduced from £4,544 to £4,026.

ANOTHER MILESTONE

The success, which has attended our occasional mid-week supplements like those on new loan or budget, Ottawa Agreement or American crisis, has emboldened us to launch on a programme of such mid-week features on a more ambitious and extended scale and on a more regular basis. The number, which we present to our readers to-day, inaugurates the new plan, which will, in time, embrace four definite sections of Indian economy: (*a*) Industries; (*b*) Trade review; (*c*) Railways; and (*d*) Engineering. Towards this end, we make a modest beginning with the Industries Supplement, which will, so far as this issue is concerned, deal only with sugar and which, we hope, will be extended and expanded so as to include other important industries like jute, cotton, iron, tea, coal, cement and paper.

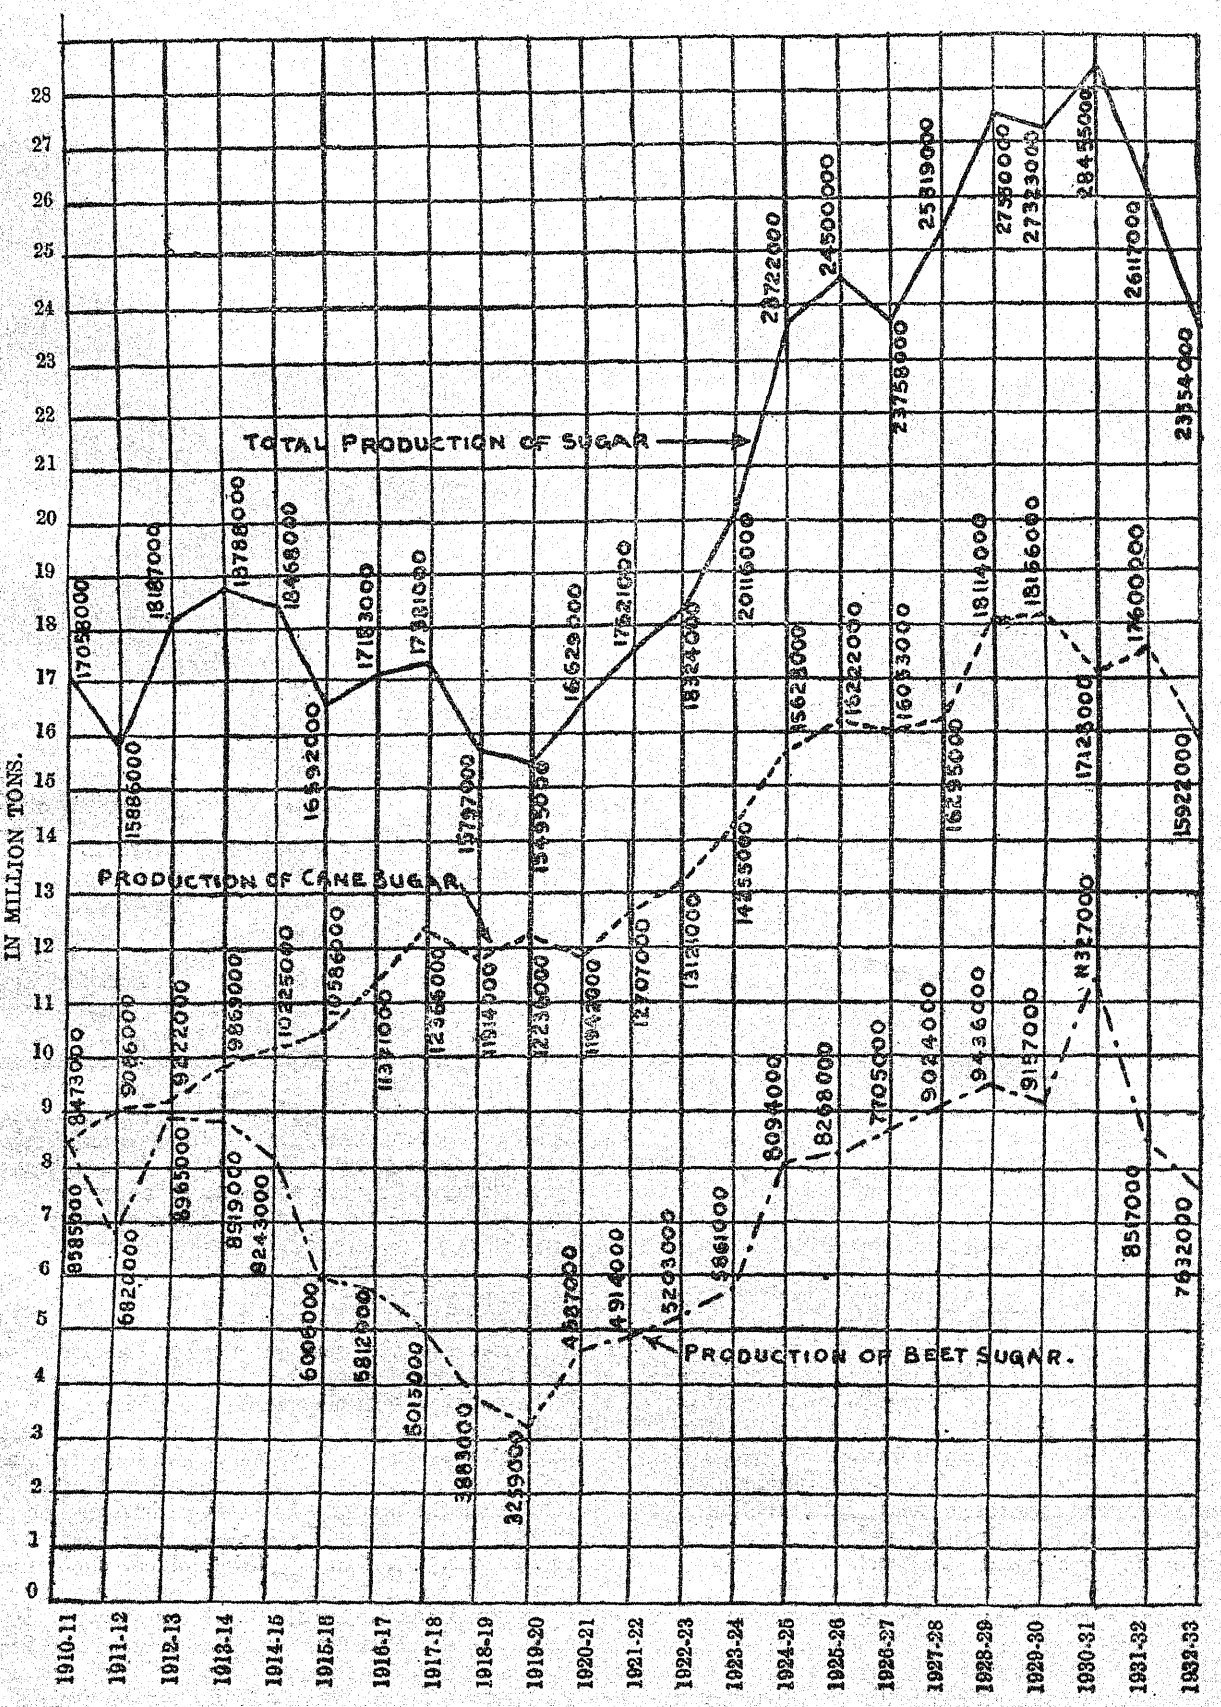
It is hardly necessary for us to explain, at any great length, the purpose and utility of a supplement of this nature. The purpose of such a monthly feature stands self-explained and self-vindicated. On the one hand, there are but few trade journals in this country; such as they are, they are hardly useful to any but those in the respective trades, as the emphasis is invariably on technical details. The broad financial and economic aspects of each trade or industry are not dealt with in a competent or intelligent way. On the other hand, such journals as are devoted to the study of questions connected with finance and economics have so far been content with filling their trade sections with cuttings from daily newspapers, official *communiques* and publications, and other periodicals. No constructive thought has been devoted to these questions; it is scissors and paste, and not brains, that have produced most of the matter that one comes across in connection with such topics. We believe that a journal, which understands public finance and which is concerned with watching every development connected with national economy and its bearing on international economy, can, if and when it makes a sincere and earnest endeavour, do justice to the financial and economic issues connected with such sections of national economy as industries, railways or engineering. We do not want to teach engineering to engineers, or to help the weaving master of a jute mill or a tea planter how to do his job better. But we do propose that the chief men in charge of the varied business or quasi-business undertakings, are enabled to have a more vivid realisation by the principles of finance which should be kept in view in all such undertakings and the economic considerations which should guide them in their sectional activity so as to make sure that each link is strong and helps to strengthen the whole chain.

India is definitely committed to an active policy of industrial expansion. The technique of capital plan, factory equipment, buying and selling organisation, husbanding of resources, and training of skilled and unskilled labour is being developed according as more and more opportunities are being created. There are decided advantages, natural and otherwise, which justify the optimism that if India could but learn the technique aright, and if, otherwise, there is co-ordinating effort by the State, the public and the leaders of industry, the future of Indian industry is full of promise. The State is committed to a policy of discriminating protection. But as the Governmental machinery is wooden, antidiluvian and not easily or quickly responsive to national needs and requirements as and when they arise, there is, often enough, extreme dilatoriness and half-heartedness in the execution of such a policy. Nor is one sure, when the policy is being given effect to, that all precautions are taken to ensure the greatest good to the greatest number of national interests. In other words, if protection is to be afforded to any industry, there is, from the industry in question, due a reciprocal obligation to the public who, in effect, bear the cost of protection. Of such reciprocal obligation, there has been but a hazy recognition. Above all, the minimum that is expected of each protected industry is that every cause of apprehension is removed as regards inefficiency or whimsicality of management, unsuitable conditions of living and wages for labour, combine of the vested interests as against the consumers, and proneness to lean, for aye and for ever, on the crutches of State help. The industry, favoured by Government's protection, must be protected not only against the foreign competitors but also against the philistine and crook in its own ranks. In the case of every industry, integrity, enterprise, economy and fair dealing are the tests of sound and healthy business. In the case of a protected industry these attributes are the very essence of the duty which the businessmen owe to the State and the population of the country. In the present conditions, the varied features of the protective policy in action are unsatisfactory. In the first place, the industry needing protection keeps asking for bread and may only get stone. In the second place, when it does get bread, it gets it almost while it is in the last stage of famishment. And in the third place, such bread as it gets is kept for its exclusive use, without any return obligation imposed for the kindness shown. What is needed is a livelier sense on the part of the State of its interest in a prosperous national industry and on the part of the captains of industry of their duty to the public who make the sacrifice for their benefit.

The Government owe a duty to industries to afford them conditions for healthy growth; and the industries owe a duty to the country for honest, clean and wholesome service.

The purpose of the *Industries Supplement* will be to maintain an alert watch that India's national industries are given their rights by the State and discharge their obligations by the people.

GRAPH A—SHOWING WORLD PRODUCTION OF SUGAR FROM 1910-11 TO 1932-33.



(With acknowledgements to Mr. R. C. Srivastava).

THE SUGAR INDUSTRY IN INDIA—PAST, PRESENT AND FUTURE

The national importance of sugar in India is but dimly understood by the man in the street, despite the considerable quickening of activity, in recent times, with regard to the manufacture of sugar. Immediately after the War, the possibility and desirability of utilising to the full the sugarcane resources of India was examined, though without any tangible result, by the Government of India. In fact, even in earlier stages, there was fitful attention paid to this subject on sundry occasions. The Board of Agriculture, it is to be presumed, did note endlessly on the sugar file, but the notes led nowhere. In February, 1919, a special officer was appointed to collect all relevant data and statistics as regards the best way of exploiting the advantages which India possessed in the matter of a large sugarcane area under cultivation. Soon after, a committee was appointed under the Chairmanship of Mr. J. MacKenna, who was then Agricultural Adviser to the Government of India, to examine, amongst other questions, the various sugar-growing tracts of India with a view to determine the nature of the expansion possible in such tracts either by the development of a factory industry or by improvement in the existing indigenous methods, and generally to review the position of India with regard to the world's sugar supply and to formulate recommendations for the improvement of that position.

There was no doubt at any time as to the desirability of such expansion in the position of India in the world sugar market. It was recognised that the food value of sugar was high; that the normal consumption had been increasing steadily for many years and in India no less than elsewhere; that sugarcane was indigenous in India which, until very recent years, has stood first of all countries in the world in its area under cane and its estimated yield of cane sugar. The question, which the Sugar Committee, presided over by Mr. MacKenna and, in its later stages, by Mr. F. (now Sir Frank) Noyce addressed to themselves, was this: While India should be in a position, as she was in the past, to produce a surplus of sugar for export, why is she obliged to supplement her own supplies by increasing imports? The report that they submitted in 1920 was of great value as emphasising the importance of sugar in national economy. As was the fate of the recommendations of most other committees in India, the report of the Indian Sugar Committee of 1920 was consigned, in due time, to oblivion.

Roundabout that time, however, there was a keener appreciation amongst our businessmen of the possibility of the sugar industry in India. This stimulated the floatation of a few concerns for the manufacture of sugar. The most important of these was the giant sugar corporation sponsored by Tatas and inspired by the knowledge and information that had been gathered by Mr. B. J. Padshah of that firm who was on the Sugar Committee. This Corporation, started amidst most impressive circumstances, came, however, to an abrupt end. Negotiations were on hand for the acquisition of land so that the Company might have its own plantations. Considerable difficulty was experienced in this matter. In the result the Tatas decided to proceed no further with the project and took the company into liquidation. A company, whose ten rupee shares shot up to Rs. 50 premium immmediately on floatation, was thus forced to give, up, within a few months of its inauguration, the attempt to pdoduce sugar on a mass scale.

Nothing more was heard of the importance of the sugar industry till three years ago when the higher and higher revenue duties that were being imposed upon sugar imports brought the question once again to the fore. If this problem has to-day attained considerable prominence, it is due not to a correct understanding of the problem as such, but to an incidental and accidental happening like high import duties suggesting the desirability of steps being taken for the tackling of this problem. The Government of India never understood the full significance of sugarcane in the agricultural and rural economy of the country, nor of sugar in its industrial economy. They showed faint glimmerings of understanding on few occasions; but they were innocent of any direct, active and intelligent policy calculated to make sugarcane and sugar occupy that pride of place in national economy which they should. If, ultimately, a situation has materialised in which conditions certainly propitious for the manufacture of sugar have been created, it is due less to any design or careful plan than to mere accident or fortuitous circumstances. That the promotion of the production of sugar is desirable from every point of view, is a matter on which there could be no difference of opinion. There was no difference of opinion even in earlier years when nothing was done. The main fact is that there was a total lack of any intelligent or active policy on the part of the State in affairs pertaining to national economy. The importance of sugar is emphasised whether one views this problem in relation to agricultural or rural or industrial economy of the country.

1. To start with, the need for autonomy as regards sugar was vividly realised, as a factor of national safety, in the conditions created by the War.

2. The agricultural side of the case is of paramount importance;

(*a*) In most parts of India, sugar occupies an unique place in the system of the rotation of crops. There are, it is true, other crops which can replace cane—that is, garden crops like chillies and tobacco, and even staple crops like wheat, rice and octton. But, as the Tariff Board has pointed out, if a substitution of this nature took place, there should be considerable deterioration in the agricultural system; and, at the same time, the productivity of the soil should also be less. The essential fact about sugarcane cultivation is that it requires manuring on a large scale; the soil has to be well prepared; and the land is deeply furrowed. The benefit of such stirring of the soil and such careful manuring is reflected in a better outturn of the crops that are grown in the year following a sugarcane crop. It has been proved that, in the United Provinces, most types of wheat grown after sugar give an yield of 30 maunds as against 20 maunds when the same type of wheat is grown after any other crop.

(*b*) While crops like rice or wheat or cotton are, in part, dependent upon markets outside of India; and while, in their case, the rupee prices are determined by the relevant factors pertaining to like crops in other parts of the world, the entire crop of cane grown in India is consumed within India; and a good measure of control over its prices can, therefore, be

Thompson BOILERS & ACCESSORIES
FAIRLIE HOUSE, FAIRLIE PLACE, CALCUTTA

exercised. In other words, the agriculturist is at the mercy of outside factors so far as every crop other than cane is concerned. If the Government take on hand a comprehensive and effective plan for ensuring a satisfactory price to the sugarcane growers, there is every chance of such a plan bearing fruitful results as one has not to reckon with extraneous influences in this case. It is possible, in regard to sugarcane, to reserve the entire Indian market to the Indian agriculturists and to create conditions in which a suitable price will be forthcoming. From this point of view, sugarcane plays a most important part in the fortunes and in the various adjustments of the rural population.

(*c*) If the agriculturists rely on sugarcane as the one crop which would not let them down, equally is it important, from the point of view of Government revenue, that the ryots should be able to fall back upon a crop, the proceeds from which would enable them to meet the Government demands. The Bombay Government have stated that of the Rs. 26 lakhs derived from irrigation dues, Rs. 10 lakhs is accounted for by sugarcane. In Bengal, the problem to-day is the diversion of the activities of the cultivators to some other crops besides jute. Bengal cannot afford to grow as much jute as she has been doing. If the golden fibre is to fetch a satisfactory price, a moiety of the land now under jute cultivation should be put under some other crop. Sugarcane suggests itself as the most apt substitute. By a growing popularity of cane with the cultivators, there is every reason to hope that the difficulties experienced by zemindars and Government in the last two years in regard to the collection of revenue would shortly disappear.

(*d*) There are crops like cotton which pay an extraordinarily good margin of profit in certain years. Jute, too, has its spell of amazing prosperity. But taking a number of years together, sugarcane will be found to pay the steadiest and the most consistent return to the cultivators. Garden crops like chillies do pay better sometimes; but, in their case, the market is limited and the price fluctuations are big. From every point of view, sugarcane is a far more reliable crop to lean on than any other.

(*e*) In the village economy, sugarcane is of great value as supplementing the supplies of fodder for cattle. Stalks and edible leaves of the cane make substantial food for cattle; and to the extent that there is shortage in grass and other kinds of fodder, sugarcane leaves come very handy in the harvesting period. This is so valuable, indeed, that the village folk would be prepared to strip cane free, the stalks and leaves being sufficient remuneration.

3. In relation to rural economy, sugarcane has great significance :

(*a*) The harvesting season for sugarcane is from November to the middle of March. This period is the interval between the *karif* and *rabi* seasons and serves to afford employment to the agriculturist and his cattle at a time when other employment is scarce.

(*b*) Sugarcane cultivation gives a living to between thirteen million people to fifteen million people in India. The production of sugar in the factories would mean that, during the season, anything like 50,000 men could secure service as industrial labourers.

(*c*) The value of the sugarcane crop together with the manufactured products therefrom, should mean an increase in the national economy by anything like Rs. 60 crores.

(*d*) As Mr. Padshah has pointed out in his supplementary note to the Sugar Committee Report, the agricultural problem of sugar touches the problem of the poverty of the country; though nothing could be looked for from sugar alone to abolish poverty, there is hope of reducing the rigour of poverty partly by reducing cost of living, more largely by added agricultural income. Though the previous poverty be poverty still, and regrettable at that, yet it is greatly reduced poverty, and that is worth trying for.

4. We may now turn to a study of the importance of sugar in relation to industrial economy:

(*a*) Sugar industry differs from every other industry in that, of the total cost of producing the manufactured goods in the case of sugar, about two-thirds represents the price of the raw material. In the case of steel, for instance, iron ore is barely a tenth of the value of the finished product. That is, sugar as an industrial proposition is of prime importance to the sugarcane cultivator. The industrial and agricultural interests of the country are promoted, simultaneously, in the case of sugar to a far greater extent than is the case in regard to any other industry.

(*b*) Of the four conditions laid down by the Fiscal Commission as the criteria to be satisfied by any industry claiming protection, the first is abundant supply of raw material. India has, perhaps, the largest area under cane of any country in the world. It is, in fact, six times as much as that of Java. The following table gives the area under cane in India for a number of years:

Area (in acres).

Provinces and States.	Current year 1931-32	Previous year, 1930-31	Average of preceding 5 years
United Provinces (including Rampur State) ...	1,514,000	1,504,000	1,475,000
Punjab	474,000	426,000	409,000
Bihar and Orissa ...	282,000	284,000	288,000
Bengal	233,000	199,000	204,000
Madras	117,000	112,000	104,000
Bombay (including Indian States) ...	93,000	93,000	90,000
North-west Frontier Province ...	44,000	47,000	49,000
Assam	31,000	33,000	38,000
Central Provinces and Berar ...	22,000	21,000	23,000
Delhi	3,000	5,000	6,000
Mysore	36,000	38,000	33,000
Hyderabad ...	35,000	34,000	...
Baroda	2,000	1,000	2,000
Total ...	2,886,000	2,797,000	2,721,000

India has a sufficiently large area under cane; and there has been sufficient improvement in the methods of agriculture to justify the hope that all the raw material necessary for meeting the entire demand of sugar in the country could easily be made available.

(*c*) The second condition of the Fiscal Commission is cheap power. This question does not arise at all in the case of sugar as the "bagasse" provides all the fuel that is required in the factory.

(*d*) The third condition is a large home market. India is one of the largest consumers of sugar in the world. At the time the Tariff Board report was written, it was estimated that India was importing one million tons of sugar annually, about 100,000 tons was manufactured in India in refineries or central factories; a varying amount estimated at 200,000 to 250,000 tons was manufactured by Khandsaris mainly in Rohilkund by the *bel* method; and in addition to these some 2½ million tons of gur was consumed each year. In regard to owning so large a market at its very door, the Indian sugar industry differs from the other cane sugar producing countries like Java, Cuba, the West Indies, Mauritius and Hawaii. In these areas, the gross consumption amounts to about 630,000 tons against a production of about 8,800,000 tons annually. In other words, both as regards production and consumption India can be completely self-contained as it is possible for no other country to be.

(*e*) The fourth condition is a sufficient supply of labour. In the nature of the case, sugar factories have to be located in rural parts right in the midst

'Castrol' gives just that little extra which makes all the difference between an oil that is merely good, and one that is *better*. Try a Wakefield INDUSTRIAL Oil for your Plant and Machinery and obtain satisfaction.

of sugarcane growing areas. The factories have, therefore, to depend upon the surrounding villages for their labour force. The factory season corresponds to the period when agricultural operation is normally small ; and no difficulty is, therefore, experienced in securing an adequate supply of labour. Labourers are quite efficient and available at rates more or less corresponding to the wages paid in Java. In other countries, far higher wages have to be paid.

Here was India with the biggest crop, the biggest consumption, the biggest imports, and the largest natural advantages. How was it that nothing was done to take advantage of so unique a combination of propitious factors?

It has been proved that given favourable conditions, Indian businessmen will have enterprise enough to find the requisite capital for the inauguration of companies in adequate numbers to avail themselves of the opportunity. Over sixty new ventures have entered the field in the last two years. They could have been floated a decade or two earlier if only the State had made it possible for them to feel that sugar industry was assured of bright prospects.

It has also been proved that given favourable conditions, there can be the utmost elasticity in the production of both sugarcane and sugar. The following table giving a forecast of the annual production and consumption in India up to 1934-35 from 1930-31 shows the rapid pace at which the sugar industry is growing.

Particulars	1930-31	Actual 1931-32	Estimated 1932-33	Estimated 1933-34	Estimated 1934-35
	Tons	Tons	Tons	Tons	Tons
Production from existing capacity of old factories ...	155,000	228,000	228,000	351,000	586,000
Production due to increase in capacity of old factories (at 10 per cent. of previous season's capacity)	...	...	23,000	35,000	60,000
Production from new factories commencing manufacturing operations during the season	...	...	100,000	200,000	Nil.
Total production of factory sugar	155,000	228,000	351,000	586,000	646,000
Estimated production of Khamdsari sugar	200,000	250,000	275,000	300,000	300,000
Total production of all kinds of sugar (excluding *gur*) ...	355,000	478,000	626,000	886,000	946,000

In 1921-22 sugar factories in India produced only 28,250 tons. By 1929-30, in extreme gradual stages, the production increased to 89,800 tons. The production jumped to 155,000 in 1930-31. Whereas last year's estimate for 1931-32 production was only 170,000 the revised estimate is 228,000. The estimate for 1932, which was 247,000, is now expected to be increased to 351,000. By the same token, the 1933-34 estimate at 332,000 is now revised to 586,000. In 1934-35, the production is expected to reach the substantial total of 646,000. So heady a progress is a most creditable achievement indeed.

It has also been proved that given suitable conditions, the agriculturists could equally rise to the occasion. Improved qualities of sugarcane are being grown on a more and more expensive scale. The area under improved varieties in the provinces of India amounted to 39 per cent. of the total area in 1931-32 as compared with 28 per cent. of the total area in the preceding year. The following table gives the area under improved cane in various provinces including Burma during 1931-32 as compared with 1930-31.

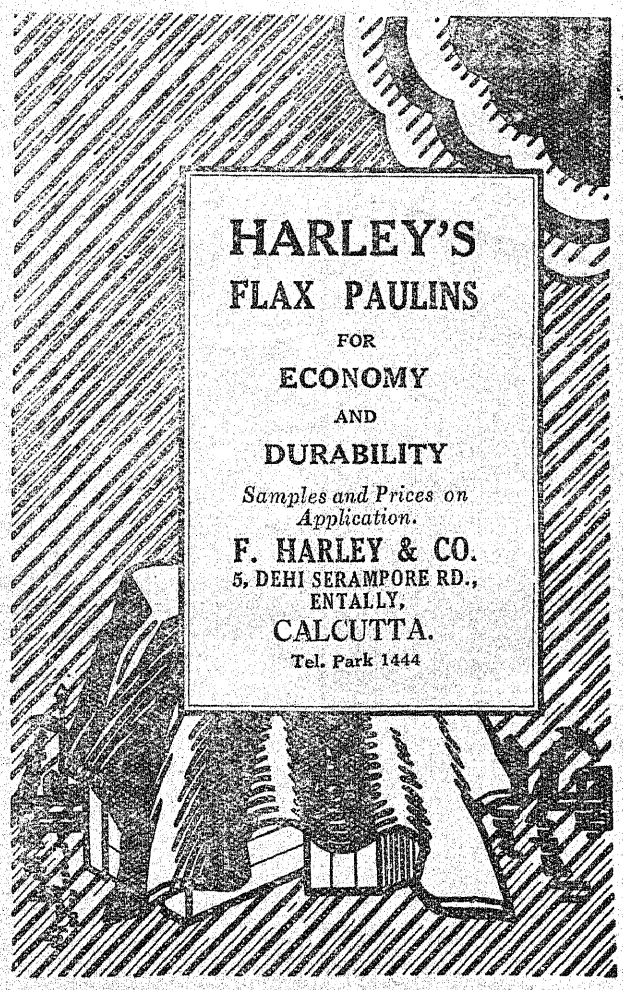
Province.	1931-32	1930-31
United Provinces ...	678,774	514,691
Punjab	120,350	70,000
Bihar & Orissa ...	189,418	70,484
Bengal	100,000	100,000
Madras	26,974	10,000
Bombay	Nominal	Nominal
North-west Frontier Province	38,000	40,000
Assam	7,750	6,900
Central Provinces ...	7,013	4,269
Burma	2,200	250
Total ...	1,170,479	817,094

Let us now sum up: Sugar has thus a definite place in national economy. It is the one industry which affects agriculture fundamentally. It is calculated to help rural economy in striking and multifarious ways. If only encouragement had been given immediately after the sugar committee report was published in 1920, India could have retained about Rs. 200 crores in the sense and to the extent that foreign exports would have been stopped. The reduction of total imports by this figure would have meant that the Government would have been free from exchange embarrassment to a corresponding extent. Provincial governments would not have had as serious difficulty in the collection of revenue as was the case in the past two years. If Indian agriculturists are to learn, and to be encouraged to learn, in imperceptible ways, the advantages of change-over from primitive methods to advanced methods, sugarcane cultivation affords the best opportunity. Growth of sugarcane and increased production of sugar would have been of great value to the agriculturists, the industrialists and the Government. It would have improved the tone of rural life; it would have added immensely to national wealth. After the War, every country was taking steps to make itself self-contained so far as sugar was concerned. India alone was content to remain a passive spectator. Sugar illustrates what dangers can befall a country by a negative or adverse economic policy on the part of the State. The story of the last three years is, happily, an illustration of the great good which an active national economic policy can yield to the nation.

The credit for this quickening of the economic conscience of the Government is due to the efforts made by the Imperial Council of Agricultural Research. Early in 1930, the Imperial Council of Agricultural Research sent a representation to the Government of India on the subject of the sugar industry. This representation was forwarded to the local governments for their opinion. When their opinions were received, the Imperial Council had the whole question examined by a specially qualified committee. The conclusion of the committee was that the Government of India be asked to refer to the Tariff Board for enquiry the question whether protection was required, and if so, in what measure, for the sugar industry in India. It was this step of the Imperial Council which focussed public attention on the sugar question and which is responsible for so satisfactory an increase in the number of sugar factories that the time is fast coming when India should be producing all the sugar she needs.

Of all the protected industries, sugar stands in the most favourable position. The main reason for this is that the protection granted is of a most substantial character. The import duties work out to nearly double the Java cost of sugar. In the case of other industries, such protection as was given was afforded in a piecemeal fashion. The result was that none of those industries could built up a strong and sturdy competitive power as against foreign rivals. There are industries like cotton and iron and steel which are scarcely out of the wood in spite of repeated doses of protection. Industries like paper and cement have done tolerably well. It is sugar that has done pre-eminently well. Mr. R. C. Srivastava, the Government sugar technologist, writing his review of the Indian sugar industry for 1931-32, expresses great satisfaction that the movement, which made such modest beginnings some two years back, has gone on gathering strength at a rate which far surpasses the most sanguine expectations. If State aid is to be given to any industry, let it be given sharp and quick and smart and substantial—this is the lesson and moral to be learnt from the last two years' history of sugar in India. The experience of textile industry and iron and steel industry proves that anæmic or half-hearted or piecemeal protection does good to nobody.

If the present position as regards sugar is so encouraging, what of the future? Considerable publicity has been given to the "word of warning" given by Mr. Srivastava that "considerable caution and restraint are necessary in connection with any further expansion of the industry, if it is to be saved from the fate of jute, rubber and a number of other industries which are now suffering from the ill-effects of



over-production". Mr. Srivastava is afraid that the pace of progress has recently become too fast to be healthy. We should rather think that the forebodings of Mr. Srivastava are premature if not unwarranted. The heady expansion of producing units causes us neither misgivings nor apprehensions. We are rather worried about the lack of plan, the lack of adequate references, the lack of business experience, and the lack of careful appreciation of the possibility of overcrowding in any one centre, that characterise a good many of the new entrants to the sugar field. There is still ample room for concerns with a satisfactory capital plan, sponsored by firms of repute and experience, and located in centres where there has been no ovrcrowding. From this point of view, we believe that there are still great potentialities in the Bombay and Madras Presidencies and in the Mysore and Hyderabad States. Bengal, too, has not so far come into the picture. As there is official propaganda in favour of jute cultivators turning their attention to an alternative crop like sugarcane, this province can well afford to have a few new sugar concerns.

As for the fear that the production of sugar in India would exceed consumption, we should not forget that over the past 15 years there has been manifest a marked increase in the consuming capacity of the population for sugar. This consuming capacity received a check in the extreme economic depression that has been prevailing for three years. As soon as there is a betterment in economic conditions, and as soon as the masses have increased purchasing power, the consumption of sugar in India must start showing substantial increase. To argue that on the present basis of restricted consumption, the heady expansion that has already taken place and that is bound to take place would exceed demand would be inaccurate. The present is an extremely abnormal period so far as the purchasing power of the masses is concerned. We do believe that while there should be caution and discretion in the plan, structure and working of the new companies, we do not see any reason to join in the warning of the Government Technologist that no more concerns should be started. The field of Indian sugar companies is not yet overcrowded. There are certain parts where it is not only possible but desirable that enterprising capitalists should start new ventures. The lesson of the past is not against any more floatations but in favour of well-conceived, well-planned and well-working enterprises.

TARIFF BOARD RECOUNENDATIONS

The following are the sections from the summary of the Tariff Board Report (1931) in so far as they bear on the protective duties :

Any scheme of bounties is on administrative grounds impracticable. If khandsari manufacturers were included in the scheme, it would be impossible to devise machinery for assessing and checking the bounty. If the khandsari industry were excluded from the scheme, central sugar factories would be given an unfair advantage over this branch of the industry.

We propose therefore that the assistance given should be by way of duty. In order to enable the industry to face initial difficulties and to safeguard the position of the manufacturer of indigenous sugar by the bel method in Rohilkhand we propose that for the first seven years the duty should be fixed at Rs. 7-4 per cwt., and for the remaining period at Rs. 6-4 per cwt. The total protection thus granted would be approximately the same as would result from the imposition of a duty of Rs. 6-9-3 for the whole period of protection.

We recommend that the period of protection should be for 15 years.

Since agreement regarding export quotas appears to have been arrived at by the leading sugar producing countries, we have with some hesitation decided to recommend no further immediate increase in duty beyond the protective duty already recommended. We recommend that should the present international negotiations for stabilisation of prices fail or should market prices in Calcutta in the future fall below Rs. 4 without duty, a further duty of annas 8 per cwt., should immediately be imposed.

It is suggested that power to impose this duty should be vested in the Governor-General in Council but that subsequent to the imposition of such duty sanction of the Legislature should be obtained for the continuance of the deferred duty and for the fixation of the period for which it is to be in force.

We propose that the duties should apply to all classes of sugar including sugarcandy.

Expenditure on development and research in connection with sugarcane in India is on a scale which in view of the importance of the sugarcane crop may be considered small, particularly when compared to expenditure in such countries as Java and Hawaii. We propose that increased sums should be allotted to development and research work since without such measures the whole purpose of the protective scheme is likely to be delayed if not defeated. Indeed we regard this as almost a condition precedent to protection.

We would recommend a grant of not less than Rs. 10 lakhs annually to the Imperial Council of Agricultural Research for this purpose. If our scheme of protection is accepted we consider that legislation should be introduced making it compulsory for sugar factories to submit such returns or information as may be called for by the Governor-General in Council or any officer authorised by him in this behalf.

We consider that the scale for cane payment recommended by the Indian sugar committee, namely a sliding scale based on price for cane equal to half the price of sugar manufactured from it subject to a minimum of annas six per maund is generally suitable. But in the first years of protection we consider that this should be increased by one anna per maund.

We would recommend that power should be taken to enable the Governor-General in Council or any authority authorised by him in this behalf to issue rules requiring sugar factories to post in a conspicuous place at the entrance to the factories notices specifying such matters in connection with rates paid for cane as may be thought fit.

We do not recommend investment by Government in shares in sugar companies, but we would have no objection to the grant of loans by Government should this form of assistance appear desirable in any particular instance.

Attention is drawn to the recommendations contained in paragraph 292 of the Fiscal Commission's Report. We consider that if the industry is declared protected, steps should be taken as early as possible to ensure that the conditions suggested by the Fiscal Commission are fulfilled by companies engaged in sugar industry.

Fair representation of Indian interests on the Directorate and opportunity for Indian investors to subscribe to the share capital of new companies should be secured by such means as Government may consider practicable in the circumstances of the sugar industry.

We would suggest that no loan, grant, subsidy or other facility should be offered to any sugar factory which has not complied with these conditions.

ACT NO. XIII OF 1932

The following is the full text of the Sugar Industry (Protection) Act, 1932.

An Act to provide for the Fostering and Development of the Sugar Industry in British India.

Whereas it is expedient, in pursuance of the policy of discriminating protection of industries in British India with due regard to the well-being of the community, to provide for the fostering and development of the sugar industry for a period ending with the 31st day of March, 1946, by determining the extent of the protection to be conferred up to the 31st day of March, 1938, and by making provision for the determination of the extent of the protection to be conferred for the remainder of the period. It is hereby enacted as follows:—

Short Title.

1. This Act may be called the Sugar Industry (Protection) Act, 1932 (Amendment of Schedule II, Act VIII of 1894).

2. (1) In the Second Schedule to the Indian Tariff Act, 1894 (VIII of 1894), there shall be made the amendments specified in the Schedule to this Act.

(2) The amendments made by sub-section (1) shall have effect up to the 31st day of March, 1938.

Statutory Inquiry.

3. Tht Governor-General in Council shall cause to be made, by such persons as he may appoint in this behalf, an inquiry to ascertain if the protection of the sugar industry during the period from the 31st day of March, 1938, to the 31st day of March, 1946, should be continued to the extent conferred by this Act, or to a greater or lesser extent, and shall, not later than the 31st day of March, 1938, lay his proposals in this behalf before the Indian Legislature.

Power to increase duty imposed by Section 2.

4. If the Governor-General in Council is satisfied, after such inquiry as he thinks fit, that sugar not manufactured in India is being imported into British India at such a price as is likely to render insufficient the benefits intended to be conferred upon the sugar industry by the duties imposed by Section 2, he may, by notification in the *Gazette of India,* increase such duty to such extent as he thinks fit.

Power to make rules requiring returns.

5. The Governor-General in Council may, by notification in the *Gazette of India,* make rules requiring the owners of sugar factories in British India to make such returns relating to the production of sugar in their factories as the Governor-General in Council may consider to be desirable, prescribing, the form of such returns, the dates of their submission and the authority to which they shall be submitted.

Power to make rules requiring notices of Prices of Sugarcane to be posted up in Sugar Factories.

6. (1) The local Government may, by notification in the local official Gazette, make rules requiring that there shall be affixed, in conspicuous places near the entrances to sugar factories, notices for the information of sellers of sugarcane, and such rules may prescribe the form and languages of such notices; and the particulars to be included therein relating to prices at which sugarcane is being bought at the factory.

(2) In making such rules the local Government may provide that a contravention thereof shall be punishable with fine which may extend to five hundred rupees.

Explanation.—In this section and in stction 5 "factory" has the meaning assigned to it in clause (3) of Section 2 of the Indian Factories Act, 1911 (XII of 1911).

THE SCHEDULE.

(See Section 2).

Amendments to be made in Schedule II to the Indian Tariff Act, 1894.

1. In Part II.

(*a*) For the heading "Sugar" and Item No. 34, the following heading and item shall be substituted, namely :—

Other Food and Drink.

34 Molasses—*Ad valorem* 25 per cent.

(*b*) the heading "Saccharine" above Item No. 34-A shall be omitted; and

(*c*) the heading "Other Food and Drink" above Item No. 35 shall be omitted.

2. In Part VII, after item No. 156, the following heading and item shall be inserted, namely :—

"SUGAR."

		Cwt. Rs. A. P.
157	Sugar and sugarcandy, excluding confectionery ...	7 4 0

3. Item No. 156-A shall be re-numbered as Item No. 150.

4. In Part VII under the head "Miscellaneous"

(*a*) in the first column, the figures "157," "158" and "159" shall be omitted;

(*b*) the heading "Matches," Undipped Splints and "Veneers" shall be numbered as Item No. 159; and

(*c*) in the second column, the entries relating to "Matches," "Undipped Splints" and "Veneers" shall be lettered, respectively, as sub-items (*a*), (*b*) and (*c*) of Item No. 159.

SCALE OF IMPORT DUTIES

The following was the scale of import duties on sugar up to the budget announced on February 28, 1931 :

Years.	Duty.	
1908-09—1910-11	5 per cent. ad valorem	
1911-12—1913-14	,, ,, ,, ,,	
1914-15—1916-17	,, ,, ,, ,,	to 28-2-16
	10 ,, ,, ,,	
1917-18—1919-20	,, ,, ,, ,,	
1920-21—1922-23	10 ,, ,, ,, ,,	28-2-21
	15 ,, ,, ,, ,,	28-2-22
	25 ,, ,, ,,	
1923-24—1924-26	25 ,, ,, ,, ,,	May, 1925
	Rs. 4-8 per cwt.	
1926-27—1928-29	,, 4-8 ,,	
1929-30 ...	,, 4-8 ,,	to 28-2-30
	,, 6-0 ,,	from 1-3-30

The following is a more detailed Statement as from March 1, 1931 :—

Sugar excluding Confectionery	From 1st March, 1931	Duty from September, 1931	Duty from April, 1932
(1) Sugar, crystallized or soft 23 D. S. and above	Rs. 7-4 per cwt.	Rs. 9-1 per cwt.	Rs. 9-1 per cwt.
(2) Sugar, crystallized or soft inferior to 23 D. S. but not inferior to 8 D. S.	Rs. 6-12 per cwt.		
(3) Sugar below 8 D. S. and sugar candy ...	*Ad valorem* 25 per cent. *plus* Rs. 2-12 per cwt.	*Ad valorem* 31¼ per cent. *plus* Rs. 3-7 per cwt.	
(4) Molasses	*Ad valorem* 25 per cent.	*Ad valorem* 31¼ per cent.	*Ad valorem* 31¼ per cent.
Tariff Values.			
Molasses :			
(1) Imported in bulk by tank steamer ...	Rs. 2-14 per cwt. 25 per cent.	Rs. 2-1 per cwt. 31¼ per cent.	Rs. 2-1 per cwt. 31¼ per cent.
(2) Otherwise imported	Rs. 3-6 per cwt. 25 per cent.	Rs. 2-9 per cwt. 31¼ per cent.	Rs. 2-9 per cwt. 31¼ per cent.
Sugar Candy	Rs. 13 per cwt. 25 per cent. *plus* Rs. 2-12 per cwt.	Rs. 10 per cwt. 31¼ per cent. *plus* Rs. 3-7 per cwt.	.....

WORLD OF INDIAN FINANCE

Friday, June, 16.

Both in Bombay and Calcutta, credits have cheapened further. It is difficult to find borrowers at ½ per cent. for interbank call money. There is nothing surprising in this development. There has been a tendency for rates to ease off even in respect of term deposits for long periods. In Bombay money fetches 2½ per cent., while in Calcutta no better rate than 2 per cent. could be obtained. Onemonth, twomonth and threemonth deposits are quoting 1, 1½ and 1¼ per cent., respectively. But banks are not keen takers at all at these rates.

Easy conditions in the money market are reflected in a quiet and uninteresting exchange market. Inactivity in the money market is generally to be attributed to the feeling of suspense created by developments abroad. Everything is at a standstill; and everyone is hoping that the next day's news might contain the announcement of some development or other calculated to give a fillip to trade activity. While the market is in this peaceful mood, no large business can pass and businessmen and bankers are merely marking time.

There was a small flutter created by the announcement this mid-week that a satisfactory settlement had been arrived at as regards the June 15 payment of Britain's instalment to America on account of the war debt. London markets would also appear to have brightened up on the publication of this news. There was a sympathetic rise in most markets, including giltedge in India. But this buoyancy proved short-lived. Prices have receded. There is again the same langour. Even the silver market, which might have been expected to respond lustily to a move deliberately designed to improve the price of silver, is apathetic. There is a small rise of 8 annas; but there has been nothing like a lively market or a substantial outturn of business. Speaking with broad reference to the exchange market, a banker said that in all the eighteen months, he had never seen a duller or more stagnant week. Confining our attention to domestic conditions, there is no cause to hope that there could be any early change for the better. All hope is centred on international developments. From this point of view, the proceedings of the World Economic Conference did not so far give any justification for an optimistic view. With 2,500 delegates, and with nearly 70 countries represented, the gathering in London is quite impressive. While, from the spectacular point of view, the numerical strength of the assembly has everything to recommend it, it is to be feared that numbers so large could not prove conducive to swift or final decisions. What is required is that topic after topic should be taken on hand and rough and ready solutions arrived at. Weak formulas and broad generalisations will not constitute the cure for the ills afflicting world trade. We have had far too many of these platitudinous pronouncement. We have had far too many of these vapourings of world statesmen and world politicians. The urgent need of the hour is the tackling of the world problems in a business spirit with a view to arrive at a businesslike solution. Mr. Ramsay MacDonald is full of good intentions; he is an expert in giving utterances to noble sentiment; and he knows exactly what phrase will suit the occasion. But the question is this: Is he the man who can prove to be a successful President of a business conference convened to tackle business propositions of world dimensions with businesslike expedition and finality?

From all of which, one should conclude that the present langour and listlessness can have but little chance of being relieved by any favourable developments in the London conference in the near future. The essential fact is that when so many assemble, there is the utmost need for give-and-take, with more emphasis on give than on take. If few representatives of nations assembled in London understand the full significance of the phrase "give and take," or realise that there is more grace in giving than in taking, the World Economic Conference need not take long to reach the end of its deliberations. As it is, each nation talks internationalism and behaves nationalism. The acutest depression of three years—depreciation arising from exaggerated nationalism—has not yet taught the nations that the best way of serving oneself is by serving the common world interests.

Turning to more present details of the immediate happenings in the domestic sphere, a development of some importance is the week's introduction of intermediate treasury bills for three months. It will be remembered, in the last week, announcement was made of the incraease of the weekly offer on the tender

day from Rs. 1 crore to Rs. 1½ crores. These two moves taken together should give the impression that the Controller of the Currency, for the time being, has no intention of switching on to six months' treasuries and that he would rather prefer securing his increased requirements from larger sales of three-months bills. The progressive decline in the average rate of accepted tenders over the past four weeks left the authorities no option in this matter. When they found that three months money was being offered to them at progressively lower rates, they were quite justified in feeling that an increase in the weekly offer was indicated. When in response to this increase the Treasury found that, in this week's auction, total applications received came to the substantial amount of Rs. 2.94 crores, it was again correct in concluding that the introduction of three months intermediates was indicated.

Moreover, the international situation is extremely uncertain at the moment. It is true that money is extremely cheap in London. But does it follow that, while the present uncertainty continues, bankers would be prepared to bring in funds from London on a large scale for investment in Rupee Treasury Bills? Would it not be far better to wait till the international situation clears up? There is yet another important consideration. January and February are the most important revenue months. In the final quarter of the fiscal year there is a substantial surplus of current revenue with current expenditure. It should, therefore, suit the Government if Treasury Bills Maturities would have to be provided for from January onwards rather than earlier. From this point of view, July would be a more appropriate month for the issue of six months Treasuries. Taking all these circumstances into consideration, the continuance of three months bills, the increase in the weekly offer and the inauguration of intermediates must be considered natural and intelligible operations.

If, however, sales of intermediates in the next week or two should prove to be on the small side, the advisibility of the introduction of six months Bills will have to be more seriously considered. For our part, we believe that at the present rates, there is a strict limit to the amount of money that would flow into Treasury Bills. We would not be surprised if, when results are made known next week, it is found that sales of intermediates have not fetched even Rs. 1 crore. If the response should continue poor, the alternative is, of course, six months Bills. By that time, we would be well into July; and it is to be hoped that the international situation would also considerably improve. Meantime, we have to examine the arguments advanced by a correspondent whose letter appears elsewhere in this issue, and who is of the view that our suggestion of six months bills is unwise and unsuitable. His main case is that the giltedge market should be given a chance to recuperate; that six month bills would retard recovery in Government securities; that, in any case, the Treasury should come on the market only for the minimum possible amount. In the first place, we believe that the kind of funds that find their way into Treasury Bills would not be easily seduced into Government securities. Even in condition in which there was the fullest confidence in a bright future for giltedge, such diversion of short-term funds into giltedge is not to be looked for. In the present situation in which confidence in Government securities has been shattered to pieces, it is a forlorn hope that funds, which are meant to be kept in a liquid condition by banks, would be invested in giltedge securities. If giltedge is to receive strength, it could not be from this source but from the reinvestment of the Rs. 15 crores and odd which will be realised from maturing loans. In the second place, our advocacy of six month bills was due to our feeling sure that exchange banks would bring in funds from London for such bills. By the introduction of six month bills banks will be induced to sell T.T. to the Treasury for larger amounts, thereby expand their resources here, and invest a portion of such extended resources in six months bills. The resources available locally would not have been disturbed to any great extent by six months bills. In the third place, our correspondent's insistence that the Government should borrow for a minimum amount overlooks the fact that the Treasury is already in debt to the Imperial Bank in ways and means account to the extent of Rs. 7 crores. There are still very big commitments to meet. There is a limit to the amount of ways and means advances that could be availed of; there is also a limit to the period for which this device should be resorted to. It is unthinkable that ways and means advances could be availed of in a manner that they will work out to there being three months Treasury Bills sold to the Imperial Bank. If only the Finance Member would prefer some gesture, which would give new life and vitality to the giltedge market by reviving confidence, and if, by virtue of such restored confidence, the funds released from the maturing loans are diverted to the purchase of giltedge securities, the market for Government securities would be able to look after itself without the extraneous aid of an artificially easy money market.

While we learn from London that the British Government have bought silver from the Indian Government for the payment of 10 million dollars, we in India know nothing about it. We are left to make our own conjectures and surmises. As is shown in a discussion of this question in another section, the cost that should have been paid by the treasury for the requisite quantity of silver on the basis of the present quotation of 36½ cents. is about £1¾ million. Now taking the London price of silver, this means that anything like 22 million fine ounces of silver should be involved in this deal between the Indian Government and the British Government. We believe that since 1927, when the Government started their sales of silver, the total of the white metal sold by the Indian authorities would be in the neighbourhood of 150 millions ounces. Inclusive of the lot now sold to the British Treasury the total would therefore come to 170 million ounces. It will be recalled that under the Pitman Act India bought from America silver to the extent of 200 million ounces. It may, therefore, be said that, whatever silver was sold from America under the Pitman Act, has now been sold since the sales started in 1927. The purchase made at that time were on the basis of about 160 cents. pen fine ounce. America is getting a portion of it back at 50 cents. In the intervening stage Britain is making a profit of about 15 cents. When the purchase and sales of silver are thus juxtaposed it is possible to have some idea of the colossal losses that India is making on its earlier silver purchases and its present silver sales. The Government should have realised against the 170 and odd million ounces of silver, anything like £9 million. There would have been some justification for the Government selling all this silver if, with the proceeds, the Government had strengthened the gold reserve. The fact of the matter is that we have lost our silver; we got no gold; all that we have is ad hoc securities for Rs. 17 crores.

Exchange was dull and stagnant. There was less business doing in the current week than at any time before. Bankers have no desire either to sell or to buy.

The closing rates are: 1s. 6 1/32d., October T. T.; and 1s. 6d., November-January T. T.

Bills may be quoted: 1s. 6⅛d., till year end.

Money was extremely easy, Union rates were ½ to ¾ per cent. for call, three days' notice and seven days' notice. Onemonth, twomonth and threemonth deposits quoted 1, 1¼ and 1½ per cent. respectively.

OTHER INDIAN MONEY MARKETS

(By Wire).

Bombay: June 15.

Money has been easy throughout the week and looks like getting easier. Interbank call money is nominal at I per cent. and 12 months money at 2½ per cent.

Exchange is steady with little business, banks selling T. T. 1s. 6 1/32d. June-October, 1s. 6d. November-December, 1s. 5 31/32d. January-February and 1s. 5 15/16d. March.

As anticipated last week, the dollar sterling cross rate soared up to 4.17 and at the close quoted 4.13¾. The upward movement is now arrested.

(By Wire.)

Karachi: June 15.

Exchange has been quiet with sellers of ready T. T. at 1s. 6 3/64d. and buyers at 1s. 6 5/64d.

Three months bills are quoted 1s. 6⅛d.

Money is easy call funds being available at 1½ per cent.

FINANCE ABROAD

As regards the instalment due on June 15, in respect of war debts, by Britain to America, it was only at the very last minute that a solution would appear to have been found. The arrangement ultimately decided on was that England was to make a token payment of 10 million dollars in silver on the basis of 50 cents per ounce of fine silver. The actual debt payable was £19 million. Against this, the nominal amount payable is 10 million dollars; the real payment, however, is to be calculated by taking into account the price of silver, the cross rate etc. The price of silver in New York is now about 36½ cents. 10 million dollars in silver on the basis of 50 cents per fine ounce is equivalent to 7.3 million dollars of silver on the basis of 36½ cents per fine ounce. 7.3 million dollars converted into sterling at the current cross rate of 4.10 dollars to the pound would be equivalent to £1.78 million. Thus, the real cost of June payment works out to £1¾ million to England. England is satisfied that while the payment of the full instalment would have gravely imperilled the success of the World Economic Conference, and involved widespread political consequences of a most serious character, this token payment avoids, on the one hand, the likelihood of any stigma that England adopted a course savouring of repudiation of obligations and, on the other, has contained enough assurance to convince the American President that the payment is accompanied by a clear acknowledgment of the debt itself. "I have no personal hesitation in saying that I do not characterise the resultant situation as default"—declares Mr. Roosevelt. All's well that ends well. But this is an end which makes another beginning.

The question naturally arises whether any inference could be drawn from this fact as to the ultimate basis of the settlement of the problems connected with inter-Allied debts. For the sake of formality, the British Note makes it clear that this payment does not in any way prejudice the ultimate settlement. The American Note also emphasises that each government reserves the utmost freedom in any subsequent discussion of the entire debt question. This formal assurance that the token payment should not be construed as having any special meaning or affording any special clue, is quite proper and in the fitness of things. It is, perhaps, too much to argue that as and when a solution is arrived at as regards war debts problem, the basis of final payments would be on some such percentage as the present payment of 10 million dollars bears to the total debt due on June 15. It would, however, be quite reasonable to draw the inference that America would be prepared to make substantial concession by way of a considerable whittling down of the total debt. It is also safe to assume that Britain, on her part, would not insist on complete cancellation of the debt but would be willing to undertake the obligation to pay, provided the amount involved could be considered reasonable. It will be remembered that in the course of his discussions on the issues that would come up before the World Economic Conference *Eavesdropper* made the suggestion that the payments by the Allies to America would be reduced to a figure within the capacity of the debtors and that the final amounts decided on would be converted into commercial loans by the flotation of public loan issues on the New York market. That developments are heading towards some such solution seems obvious from the present token payment. But on what percentage basis the reduction of debts would be effected, it would be difficult to say at the present moment. But the old truculence is certainly tending to disappear; and a more reasonable spirit will prevail when the talks are resumed.

A factor of great importance in connection with this token payment so far as India is concerned is the announcement that the payment would be in the form of silver at 50 cents per fine ounce and that the silver required for this purpose had already been acquired by the British Government from the Indian Government. In this connection, we wish to make a careful note of the words used by Mr. Neville Chamberlain. The following is the cable sent from London on June 15 and received in India in the noon of the same day:

> "Mr. Neville Chamberlain stated in the House of Commons last night that Mr. Roosevelt had accepted the British offer of 10,000,000 dollars as an acknowledgement of the War debt instalment, payment to be made in silver at 50 cents a fine ounce, which had been acquired from the Government of India."

Mr. Chamberlain makes a categoric statement that the silver required for the payment had been acquired from the Government of India. It would

(Continued on page 1147.)

1677

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.
